

DIGITAL BUSINESS INNOVATOR

2024-2025
LG CNS SUSTAINABILITY REPORT

ABOUT THIS REPORT

Report Overview

Since 2017, LG CNS has published annual sustainability report as a way of communicating with our stakeholders. This report is our ninth sustainability report. We conducted a double materiality assessment that considers both financial and social · environmental impacts. Based on the assessment result, LG CNS' sustainability activities have been categorized into environmental, social, and governance, and the main goals and achievements of each category have been disclosed. The 2024-2025 Sustainability Report introduces LG CNS' sustainable support solutions, and the ESG value of each digital solution.

Reporting Standards

This report was prepared based on the GRI Standards 2021, an international sustainability report guideline. It applies the key criteria of SASB and TCFD. Financial performance reporting was prepared in accordance with the Korean International Financial Reporting Standards (K-IFRS).

Reporting Scope

The scope of reporting includes all domestic business sites operated by LG CNS, while some of the information on social performance (human rights management, human capital management, and employee status) includes details of our subsidiaries and overseas business sites.

Reporting Period

This report includes ESG activities and performance for the fiscal year from January 1, 2024 to December 31, 2024. Some qualitative data includes information through the first half of 2025.

Report Verification

This report has been assured by an independent third-party to ensure its reliability.

Message from the CEO

Hyun, Shin Gyoan
Chief Executive Officer, LG CNS

**We will pursue technological innovation
and responsible management for ESG goals in harmony,
to grow sustainably as the most trusted and recognized AX specialist.**

Dear Stakeholders,

Despite challenging business conditions, LG CNS has continued to experience steady growth in the digital technology industry, with a focus on AI and cloud technologies, and is leading the way in AX (AI transformation) for our clients. The robust nature of our business has helped us achieve significant success, breaking our performance record for five consecutive years. This achievement was possible due to the unwavering trust and support of our clients, partners, shareholders, and employees. We are truly grateful.

Our clients perceive LG CNS as the most trusted and widely acknowledged “Digital Business Innovator.” With a focus on creating tangible business value for our clients, we have enhanced our technical and operational capabilities as well as our strategic consulting functions. This allows us to proactively identify clients’ needs and deliver customized solutions that are optimized for our clients’ business objectives. Through these efforts, we support our clients in creating tangible business value and securing sustainable competitiveness.

LG CNS is a leading AX company that creates substantial results for our clients throughout their entire AX journey. We have a dedicated AI organization, the AI Center, and our self-developed generative AI platform (DAP GenAI platform). We also flexibly apply various AI models, including LG AI Research’s EXAONE, considering our clients’ specific situations to efficiently support our clients’ AX transformation. As a result, we have been responsible for AX success stories in diverse industries, including finance and manufacturing.

(From left) Google Cloud CEO Thomas Kurian and LG CNS CEO Hyun, Shin Gyoong pose for a photo following a discussion about the diversification of cloud-based AX business in the Asia-Pacific region and the Americas

Hyun, Shin Gyoong, CEO of LG CNS (far right), and Stefan Steinle, Executive Vice President of SAP (second from right), participated in the signing ceremony of an MOU, joined by other SAP executives

LG CNS is strategically partnering with leading global technology companies to enhance our future technology capabilities. We established a “Generative AI Launch Center” with AWS, which will explore innovative business opportunities and enhancing synergies in the AX field across a wide range of business sectors, through partnerships with Microsoft and Google Cloud. We became the first company in Korea to sign an exclusive partnership with Cohere, a generative AI unicorn company, to lead the agentic AI market. We are also expanding our Cloud ERP business into the Asia-Pacific market as a strategic partner of SAP in the region.

In addition to this, we are also making progress in our global business. We have established a joint venture with Indonesia SinarMas to develop cloud and data center businesses, and have achieved meaningful results in the smart city field in the United States, securing our first order in the public market.

As following a corporate citizenship, LG CNS acknowledges the significance of ESG management and is committed to fulfilling our social responsibility of creating a sustainable future. We have developed an integrated platform called “ESG Intelligence” that collects, analyzes, and manages corporate ESG data, enabling companies to systematically manage and achieve their ESG goals. In addition, we support our clients in achieving net-zero emissions by providing ESG solutions that are specifically tailored to manufacturing and production sites. We are also developing various eco-friendly solutions, including AI-powered resource circulation solutions and power plant solutions that predict energy flows.

Internally, LG CNS has established an ESG management system and is committed to strengthening our company-wide efforts in various areas, including fair trade, information security, environmental management, safety and health, supply chain management, and social contribution. Through these efforts, LG CNS will take the lead in creating sustainable value for the future that goes beyond corporate social responsibility.

Going forward, LG CNS will continue to harmoniously pursue technological innovation and ESG responsible management, and grow together with society. Through this sustainability report, we aim to transparently share our direction, achievements, and ESG activities with our stakeholders.

We look forward to your continued interest and support. Thank you.

June 2025

Hyun, Shin Gyoong
Chief Executive Officer, LG CNS

Shin Gyoong

Company Overview

LG CNS Overview

Since the company was founded in 1987, LG CNS has been operating overseas subsidiaries in the United States, Europe, and China. As an AX (AI Transformation) specialist, LG CNS has more than 6,800 employees with the best expertise and proficiency in digital technology who are constantly leading clients’ business innovation.

Company Name	LG CNS Co., Ltd.
Address	Buildings E13 and E14, LG Science Park, 71, Magokjungang 8-ro, Gangseo-gu, Seoul, Republic of Korea
Date Established	January 1987
CEO	Hyun, Shin Gyoon
Number of Employees	6,891 persons (as of the end of 2024)
Business Fields	AI, Big data, Cloud computing, Smart factory , Smart logistics, Smart city, Subscription service-based SaaS ¹⁾ , Security, ERP ²⁾
Subsidiaries	Biztech i, Biztech On, Rightbrain, Open Source Consulting, GTinnovision, Haengbokmaru

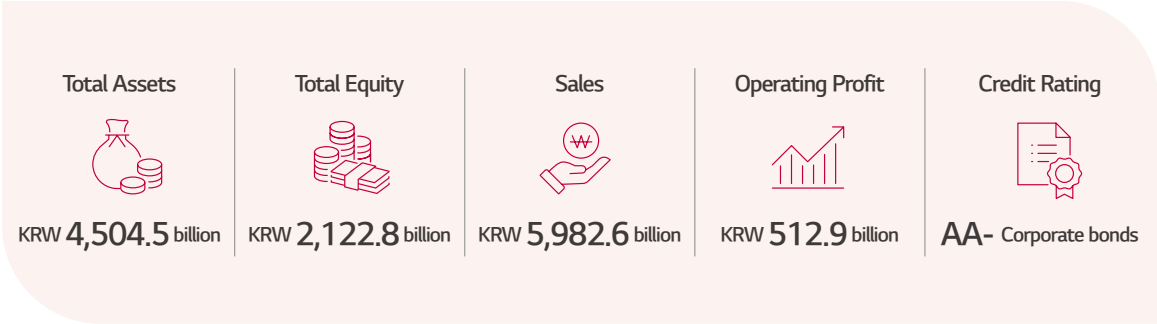

Major Awards and Achievements

- Selected as Korea’s first SAP Asia Pacific Regional Strategic Services Partner (2025)
- Acquired AWS Generative AI Competency certification (2024)
- Became first in Asia to obtain Google Cloud Generative AI Specialist certification (2024)
- Selected as Services Partner of the Year in Korea at the Google Cloud Partner Awards 2024 (for the second consecutive year) (2024)
- Qualified as a Microsoft MSSP (Managed Security Service Provider) partner (2023)
- Acquired Google Cloud Data Analytics Service Specialization certification (2023)
- Received the 2023 Korea Digital Advertising Awards in the Ad Tech and Search Performance categories (2023)

1) SaaS (Software as a Service) : A method of software delivery in which software is accessed online on a subscription basis, so that the user can pay for only what they use through accessing the cloud, rather than buy software on their own devices
2) ERP (Enterprise Resource Planning) : An integrated information system that strengthens corporate competitiveness
3) eSCM (e-Sourcing Capability Model) : A globally renowned outsourcing quality assessment model developed by Carnegie Mellon University

Financial Status

(as of the end of 2024)

Milestones

1987-2001

Foundation and Growth

1987 Founded STM with EDS (US)
1992 Completed the construction of Korea’s first Information Technology Center (ITC)
1995 Changed company name to “LG-EDS Systems”
1997 Opened the integrated global network of LG (LG NET)

2002-2017

Leap and Development

2002 Changed company name to “LG CNS”
2003 Became first in the world to acquire eSCM³⁾ Certification
2007 Opened Sangam IT Center
2013 Opened Busan Global Data Center

2018-present

Leading Digital Innovation

2018 Relocated LG CNS HQ to the Magok LG Science Park
2020 Landed Sejong Smart City Construction Project
2021 Launched first and largest cloud transition in APAC
2023 Became first in Korea to launch a Generative AI project in the financial sector
2024 Officially launched Indonesia joint venture “LG SinarMas”
2025 IPO (Initial Public Offering)

Vision and Strategy

Vision and 2025 Management Policy

LG CNS has solidified its position as the most trusted “Digital Business Innovator” for our clients. We are now taking the next step, evolving beyond our status as Korea’s leading DX company to become a global AX specialist, with our No.1 AX core technologies, including AI, big data, and cloud computing.

A First Mover in Future Innovation Technologies

- Become an AX specialist capable of applying AI to all business sectors
- Prepare for future businesses such as Agentic AI and robots by strengthening capabilities of sensing market and competitors
- Discover new business offerings such as innovative technology services

Creating Tangible Business Value for Clients

- Secure thought leadership by enhancing industrial and consulting capabilities
- Proactively identify and respond to unmet needs by expanding client outreach
- Provide customized solutions designed to enhance the value of our clients' businesses

Evolving into a Global Player with Sustainable Growth

- Accelerate global market entry, taking regional characteristics into consideration
- Embed world-class offshore/onshore delivery practices by standardizing work processes and expanding collaboration tools
- Convert to an implementation system centered on overseas subsidiaries and GDC

2025 Key Priorities and Strategies

Advancing Beyond DX to Become a First Mover in AX

LG CNS is at the forefront of various business innovations based on AX, a core element in the sustainable growth of enterprises. In January 2024, we integrated our AI research and business organizations and elevated to an AI Center to drive AX business initiatives. In March 2025, we entered into a partnership with Cohere, a technology leader in the LLM¹⁾ field, to spearhead the development of an Agentic AI ecosystem in Korea. We aim to solidify our position as an AX first mover by creating business value across diverse areas through swiftly discovering, validating, and applying AI service use cases with the AX Discovery and GenAI Factory programs, and expanding AX business experience tailored to specific industries and tasks.

Signed strategic partnership with Cohere

Building a Foundation to Grow as a Global Player

LG CNS is targeting overseas markets by developing business models that consider local characteristics, focusing on competitive offerings. Since July 2024, we have secured local business opportunities through a joint venture (JV) with Indonesia's SinarMas Group, and are expanding our cloud and data center businesses in Southeast Asia. We are developing customized versions of PerfectTwin (real transaction-based verification automation solution) ERP Edition and Optapex (marketing optimization service) for enterprise software and distributing them in the North American market. In addition, we plan to expand our global presence by offering financial DX, transportation, and city services.

Established joint venture with Indonesia's SinarMas Group

Promoting Innovation in the Delivery Processes

LG CNS is accelerating the innovation of delivery processes to improve work efficiency and focus on providing substantial customer value. We have established Build Centers in Vietnam, Indonesia, and India, and are developing a GDC (Global Delivery Center) operating system. We also are leveraging AIDD (AI-Driven Application Development) to advance our business practices in development work. Beyond these efforts, we are accelerating the transition to a CoE (Center of Excellence) delivery processes centered on regional subsidiaries and GDCs to prioritize a timely response to overseas clients.

Build Center in Vietnam

1) LLM (Large Language Model) : A large deep learning model trained on vast amounts of data

Sustainable Management Performance

Strategic Action for Sustainability Management

LG CNS has been pursuing practical efforts to ensure our sustainability, including obtaining ISO (International Organization for Standardization) certification, AX Social Contribution, and Jeong-Do Management for ESG management. We communicate regularly with the full range of our stakeholders, from our clients to our suppliers, shareholders, and employees. LG CNS will continue to create customer value that goes beyond DX (Digital Transformation) through AX (AI Transformation) in all our businesses, and fulfill our social responsibility to create a sustainable future.

Action Plan

AX Specialist Creating a Sustainable Future

Key Activities

Environmental Management

- Manage carbon emissions for each business site (based on Scope 1 and 2)
- Operate eco-friendly IT systems
- Implement energy-saving activities

Social Responsibility

- Operate a competency-based HR system and employee-customized welfare system
- Provide free AI education to students in remote and rural areas and schools for students with disabilities
- Establish company-wide safety and health management system/resolve harmful and risky factors in the project site
- Establish administrative, physical, and technical security systems/protect intellectual assets

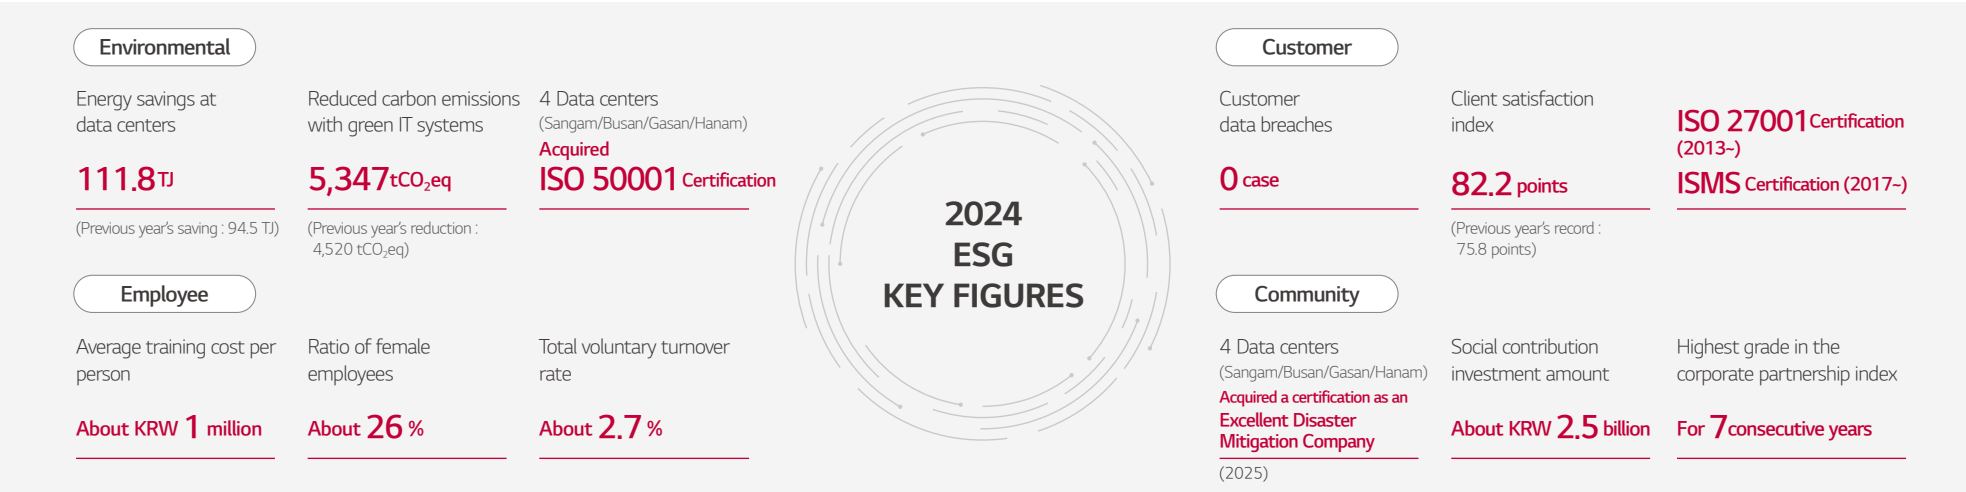

Governance

- Operate fair trade portal/pledge to prevent cartels
- Operate Jeong-Do Management guidance board/post Jeong-Do Management violation cases
- Operate irregularities reporting channels and a reward system for reporting

2024 ESG Key Figures

The key data for LG CNS' 2024 achievements in each area of ESG are shown below.

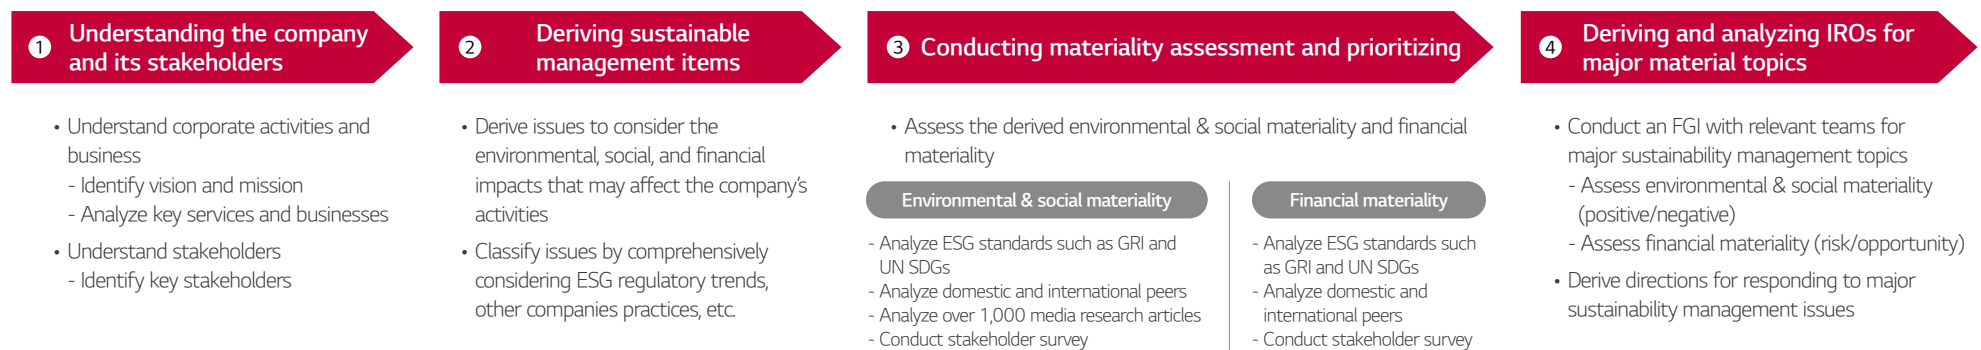

Double Materiality Assessment

Assessment Overview

LG CNS has conducted a double materiality assessment that considers environmental, social, and financial aspects. This assessment complies with the revised GRI¹⁾ Standards 2021 and applies the materiality assessment methodology of CSRD²⁾. For major sustainable management topics, specific details were defined for each issue, followed by an analysis of the impact, risk, and opportunity associated with each issue. Through this process, we identified the positive/negative impacts that LG CNS can have on the environment and society, and the risk/opportunity factors that can affect LG CNS. In addition, we conducted FGI³⁾s with relevant teams to enhance the reliability and validity of the materiality assessment results.

Double Materiality Assessment Process

1) GRI : Global Reporting Initiative

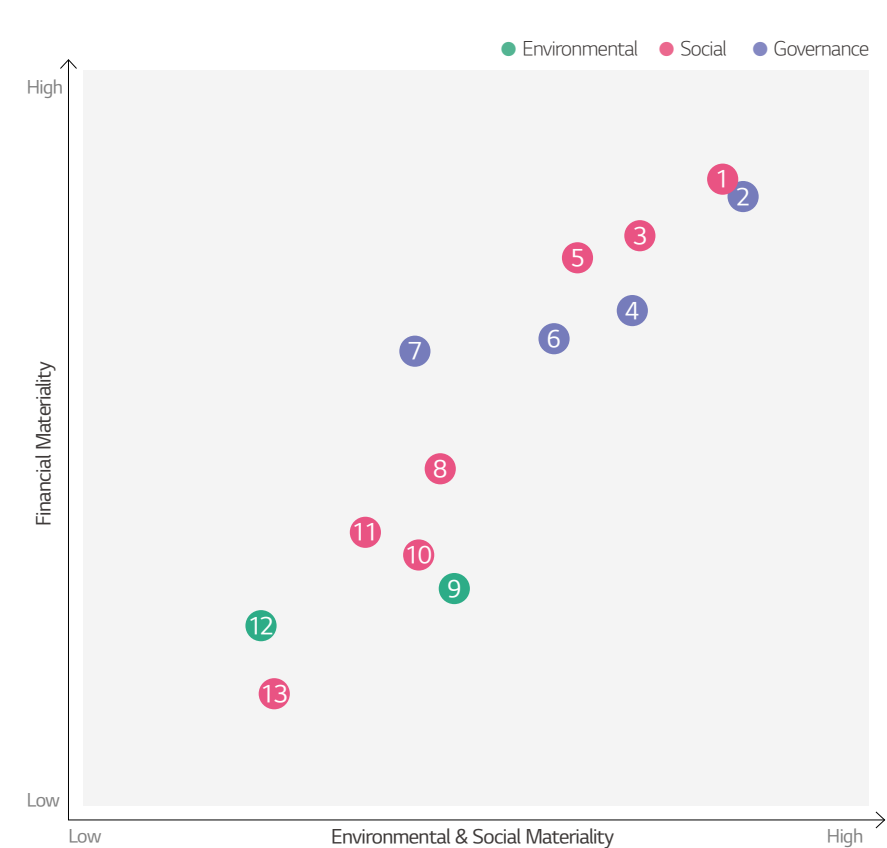

2) CSRD : Corporate Sustainability Reporting Directive

3) FGI : Focus Group Interview

Double Materiality Assessment

Double Materiality Assessment Results

LG CNS assessed a total of 13 key sustainability management topics using media analysis, comparison of peer company ESG strategies, domestic and international regulatory analyses, and internal and external stakeholder surveys, referring to major global ESG disclosure standards and evaluation indicators such as GRI and SASB. Each topic was evaluated based on its impact on sustainability and financial relevance. Through this assessment, "Information Security and Personal Information Protection," "Technology Innovation," and "Human Capital Management" were selected as the top three material issues.

Rank ¹⁾	Material Topics ²⁾	Environmental & Social Materiality	Financial Materiality	Overall	Reporting Page
1	- Information security and personal information protection	<div></div>	<div></div>	●●●	68-74p

Technological Innovation of LG CNS

Leading AX (AI Transformation) by Internalizing Key Technologies

Beyond leading digital transformation (DX), LG CNS aims to become a company that best applies AI transformation (AX), with the goal of “securing and strengthening its position as a dominant AI service provider in Korea.” AX refers to a business transformation that actively utilizes AI, including generative AI, to enable companies to achieve sustainable competitiveness. It plays an essential role in value innovation by transforming the business model, supporting strategic decisions, enhancing operational efficiency, improving the customer experience, and offering differentiated products and services. LG CNS wants our clients to secure a competitive advantage by developing into constantly evolving, dynamic companies through AX, and we aim to become a world-leading AX service provider that leads AX in all areas for our clients, with differentiated AX expertise and technologies.

Goals and Directions

1) Use case : Case in which technologies, systems, and services can be applied

2) CSP : Cloud Service Provider

3) Agentic AI : A type of AI technology that autonomously makes decisions and solves complex problems by independently creating plans, taking action, and evaluating results to achieve specific goals, rather than simply answering questions and generating reports

4) Open-source LLM (Large Language Model) : A large language model (LLM) that anyone can freely modify and utilize with open-source code or algorithms (examples : LG AI Research's EXAONE 3.5 and Meta's Llama)

Key Activities and Achievements

Strengthening Cooperation with Global AI Companies

LG CNS aims to become a leading AX specialized company in the global market by establishing partnerships with global AI companies. In March 2025, LG CNS became the first company in Korea to establish an AX partnership with Cohere, a global AI unicorn company founded by former Google AI researchers, to jointly develop agentic AI³⁾ services customized for Korean companies. In addition, we signed an MOU with Weights & Biases (W&B) at Silicon Valley, to strengthen our agentic AI operational capabilities, and will conduct joint research and development to optimize the operation and performance of agentic AI services and discover new business opportunities to achieve early dominance in Korea's agentic AI market.

Signing MOU with W&B

Operating "AI 100 in 100" Program

Through the "AI 100 in 100" program, LG CNS is systematically collecting its own AI use cases across all industries and value chains to accelerate AX with its clients. The key objective of the "AI 100 in 100" program is not just to collect cases, but to discover new business opportunities and secure customized AI-based services by strengthening our end-to-end service delivery capabilities. This will help companies accelerate their digital transformation and create innovative outcomes through AI.

Leading AX for the Financial Industry

Developing customized AI evaluation tool for the financial sector

LG CNS is leading AX in finance by continuing to use generative AI to transform the business of many financial companies. In 2025, we developed a finance-tailored AI evaluation tool to help financial companies easily choose the best open LLM⁴⁾ for their AI adoption. The tool evaluates the financial knowledge-based reasoning, mathematical reasoning, and document summarization capabilities of dozens of publicly available open LLMs to find the most suitable AI model for financial services, including banking, insurance, and securities. LG CNS is also providing differentiated customer value for financial companies by building generative AI platforms and operator response systems based on generative AI, and developing LLM-based sales branches.

Technological Innovation of LG CNS

LG CNS Key Services

LG CNS has outstanding references through sufficient experience in various industries, including finance, public sector, retail, logistics, electronics, manufacturing, chemicals, and telecommunications, as well as latest technologies, such as AI, big data, and cloud computing. Going beyond the digital transformation (DX), LG CNS supports the business innovation and growth of clients with the No.1 AX core technology and project experience accumulated in various industries.

1) Generative AI : AI technology that generates new content based on users' prompts or requests

2) Agentic AI : An autonomous AI system that executes tasks by combining functions such as work planning, tool use, and safety guideline compliance, to achieve goals independently without human intervention

3) AIDD (AI Driven Development) : A development methodology that integrates AI-based models and tools throughout the software development life cycle

4) LMM (Large Multimodal Model) : A model capable of integrating and processing various types of data, including text, image, and audio

5) LAM (Large Action Model) : A model capable of operating the web and apps directly by learning user behavior patterns

6) VLM (Vision Language Model) : A model capable of integrating visual input and natural language text for processing

7) RAG (Retrieval-Augmented Generation) : A process that optimizes the output of LLMs by referring to a reliable external knowledge base to generate accurate and consistent responses

8) AMR (Autonomous Mobile Robot) : A robot that can plan its own route and move autonomously

9) Physical AI : A technology that uses artificial intelligence in physical environments to enable robots and machines to interact with humans

10) Robot simulation : A series of processes that allows for the testing of robot software without the use of actual robots by placing virtual robots in a virtual environment

11) MarTech : A compound word combining "marketing" and "technology", refers to the software technology that marketing professionals use to optimize marketing activities and achieve goals

12) Web3 : Next-generation web technology that uses blockchain technology to implement a decentralized internet and strengthen data ownership and privacy for users

13) CBDC (Central Bank Digital Currency) : A digital form of a country's official currency, issued by the central bank

14) STO (Security Token Offering) : A method of issuing and selling assets in the form of digital securities by providing blockchain-based tokens that offer investors legal rights

15) Vertical farming : An agricultural technique in which crops are grown in vertically stacked layers, with environmental conditions precisely controlled to produce plants in a planned manner regardless of season or location

LG CNS AI/Big Data Solution

DAP¹⁾ is LG CNS' strategic brand of multi-cloud²⁾-based AI platform. DAP supports all areas of AI and big data, from defining analytical tasks to machine learning, deep learning model development, and generative AI utilization/operations. In addition, DAP is an AI platform that has been optimized for enterprises, allowing anyone to easily collect data to develop and operate AI models. With DAP, clients can quickly and easily achieve digital transformation.

As companies accelerate their digital transformation using generative AI, not only the adoption of MLDL and Vision AI, but also the adoption of generative AI platforms is increasing. Notably, the growing demand for generative AI has led to an increased need for platforms that enable companies to effectively build and manage generative AI services, rather than just utilizing AI models. In response, LG CNS has developed a platform that helps companies leverage generative AI based on their internal knowledge assets.

➤ 2024 Performance

Following the launch of DAP GenAI Text in October 2023, LG CNS released DAP GenAI Knowledge Lake and DAP GenAI Image in April 2024. These releases demonstrate LG CNS' commitment to leading AI innovation by leveraging companies' knowledge assets. As a result, 12 new clients adopted DAP solutions in 2024, demonstrating the continued growth of the platform. Significantly, DAP GenAI Knowledge Lake goes beyond simply storing internal documents and transforms them into knowledge, to build an AI pipeline capable of meaning-based search.

This allows companies to effectively implement RAG (Retrieval-Augmented Generation)³⁾ services and swiftly make informed decisions based on internal knowledge powered by AI.

In addition, DAP is expanding its influence from the domestic to the global market. We have successfully entered the Japanese market and secured overseas references. Based on these achievements, we are strengthening our position in the global AI solutions market.

➤ 2025 Strategic Directions

In 2025, LG CNS aims to support the AX (AI Transformation) of companies by expanding the use of Agentic AI technology. We will help companies operate their business processes and systems more autonomously and intelligently, thereby realizing business automation, improved customer experience, and advanced business decision-making.

Instead of merely adopting, DAP will become a core partner in AX strategies that accelerate business value creation and growth. Through this, DAP will spearhead AI innovation in both the domestic and global markets.

DAP MLDL⁴⁾

DAP MLDL is an enterprise-fit AI analytics platform based on MLOps⁵⁾ that supports the AI life cycle to realize successful DX (Digital transformation).

With DAP MLDL, clients can easily and quickly develop machine learning and deep learning models, and advance their intelligent services through training-deploying-operating-retraining function.

Key Features of DAP MLDL

Most Customers, Best Expertise

- GS Certification⁶⁾, Digital Service⁷⁾ acquisition
- 30+ clients from finance, manufacturing, public sector
- Experience with nearly 200 projects

Enterprise-Fit MLOps Platform

- Strong governance management
- Provides analysis (ML) and operations (Ops) web portals
- Reliable operations based on real-time inference
- Retrain/Drift⁸⁾ sensing-based model improvement

No Code, Just Clicks For Everyone

- Provides GUI⁹⁾-based low code analysis environment
- Develop/deploy no code model
- Provides Vision function for image analysis
- Provides reusable models that can be deployed immediately

1) DAP (Data Analytics & AI Platform) : Strategic brand name for LG CNS' AI/big data analysis platform

2) Multi Cloud : A model consisting of two or more public clouds

3) RAG (Retrieval-Augmented Generation) : A process that enables accurate and consistent responses by optimizing the output of large language models through referring to a reliable external knowledge before generating responses

4) MLDL : An abbreviation for "Machine Learning" and "Deep Learning"

5) MLOps (Machine Learning Operations) : A technology that assists in optimization to make development easier and more convenient in each stage of the entire development process of machine learning

6) GS Certification (Good Software Certification) : Software quality certification

7) Digital Service : A specialized digital service system certified by the National Information Society Agency and the Ministry of Science and ICT

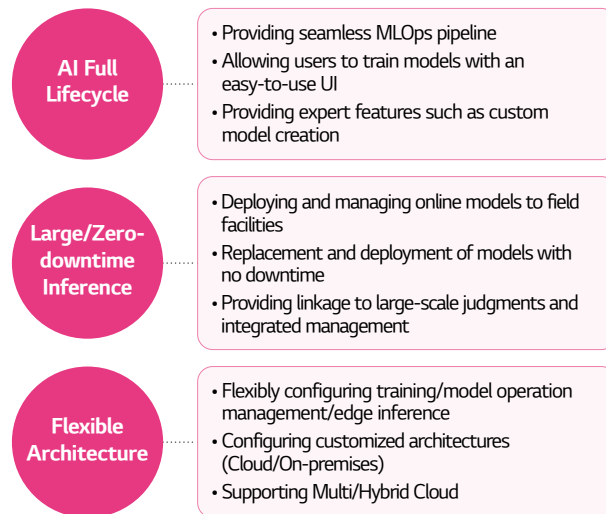

8) Drift : Changes in data that cause models to degrade in performance

9) GUI (Graphical User Interface) : An environment in which users can work through graphics when exchanging information with a computer

DAP Vision

DAP Vision is a platform specialized for AI Vision that enables AI model training and judgment on image-based data. Clients can easily and conveniently train deep learning models with the user-friendly UI¹⁾ / UX²⁾, and the generated AI models can be quickly applied to various industrial sites, such as defect detection in manufacturing factory lines and automatic cargo sorting in logistics to improve clients' business productivity.

Key Features of DAP Vision

1) UI : User Interface

2) UX : User Experience

3) LLM (Large Language Model) : A large deep learning model trained on vast amounts of text data

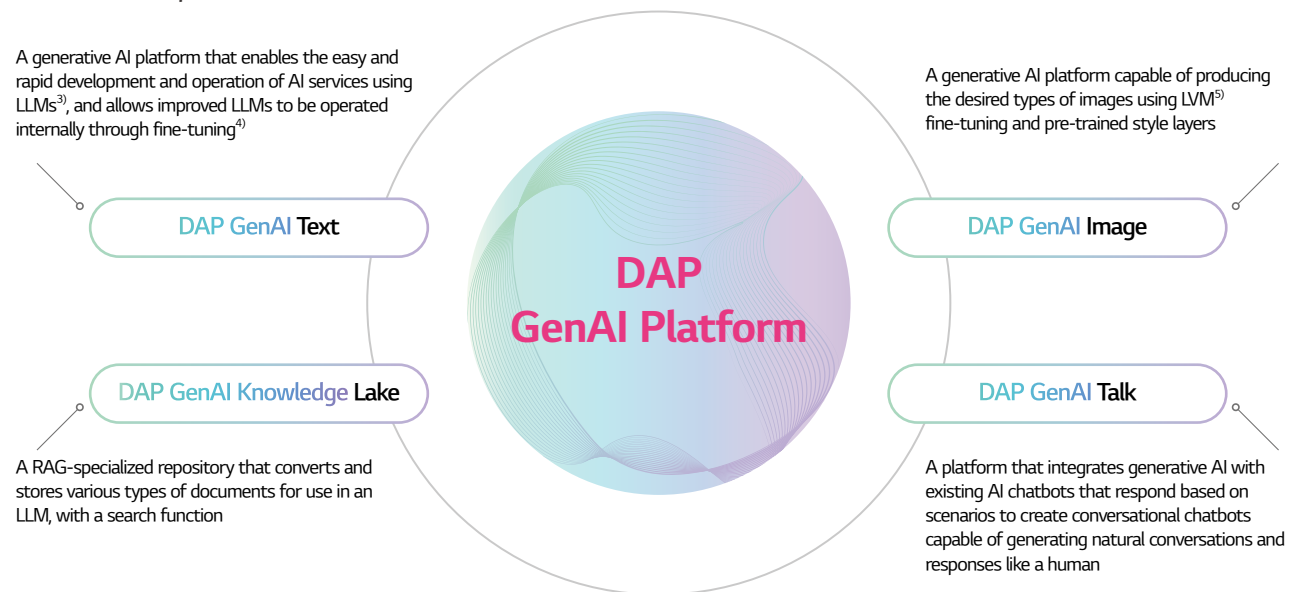

4) Fine-Tuning : The process of adjusting a trained AI model to fit a specific task or dataset

5) LVM (Large Vision Model) : A deep learning model focused on image data processing by training large-scale image data

DAP GenAI

DAP GenAI is a platform that supports the safe and rapid development and operation of enterprise generative AI services by utilizing corporate information assets. Equipped with various service scenarios, DAP GenAI realizes business intelligence through generative AI by developing enterprise AI services using customized, company-specific models and providing systematic governance across the entire organization.

DAP GenAI Lineup

Key Features of DAP GenAI

DAP Talk

The DAP Talk solution allows anyone to easily and quickly create their own chatbot. It consists of natural language understanding, text recognition, a conversation flow engine, and operation management tools. In addition, it has been transformed into an efficient chatbot platform capable of integrating chatbots from multiple organizations. Powered by robust technology that can handle large volumes of simultaneous connections, the solution is recognized for its ability to manage a large amount of data from chatbots for customers/employees, as it has been providing a system that integrates the chatbots of multiple financial company affiliates.

DAP Talk provides AI chatbot solutions and generative AI integration services that have already been proven in various industries, enabling clients to swiftly develop and operate new conversational AI services. The DAP Talk platform integrates generative AI into chatbots to provide natural conversational services, including quick responses, client-friendly day-to-day conversations, answers based on analyses of vast amounts of internal data, document summarization, recommendations, and report generation. Companies can experience customized AI conversational chatbot services using the generative AI models of their choice.

Major Clients

Finance

Others

Public

LG affiliates

ESG Value Creation with DAP

Financial Value

- Reduce working hours and development costs by providing an environment to efficiently perform machine learning/deep learning
- Enhance business performance by establishing data-driven business strategies through improved data analysis and prediction
- Increase work efficiency and productivity with chatbots

Environmental Value

- Reduce unnecessary data utilization by increasing model reusability
- Minimize energy consumption by automating data analysis processes

Social Value

- Protect clients' data by ensuring data quality, and improve fair and transparent data processing for companies
- Enhance data reliability by ensuring the quality of data analysis for national organizations such as National Tax Service, and Supreme Court
- Narrow the digital divide by providing an easy and intuitive chatbot service

CloudXper

LG CNS Cloud Service

CloudXper is a cloud service brand that offers integrated professional cloud services (consulting-migration-native deployment-operation management) provided by LG CNS, Korea's leading DX company. The name CloudXper combines the word "Cloud" and "Xper," which stands for "Expert."

2024 Performance

LG CNS offers the best services in Korea to support clients throughout their transition to the cloud. We support our clients' journeys with cloud consulting, migration/implementation, application modernization (AM), and integrated operational services under our New MSP (Managed Service Provider) framework. We have also upgraded our service technologies by integrating AI into each area.

LG CNS is committed to delivering the maximum customer value by providing fast and reliable cloud migration and operation services based on our optimized processes and extensive project experience, as well as cloud cost optimization activities based on our FinOps¹⁾ Clinic.

We are also the only MSP partner in Korea to have the highest-level partnerships with all three global CSPs (AWS, Azure, and GCP), solidifying our position in the domestic market. To expand our generative AI business, we became the first in the Asia-Pacific (APAC) region to achieve the GCP Generative AI certification and the first in Korea to earn the AWS Generative AI Competency. We are actively carrying out generative AI projects and PoC²⁾ based on the Google and AWS platforms to establish a solid foundation for becoming a leader in AI transformation (AX).

1) FinOps: A combination of "Finance" and "Operations," referring to the effective management and optimization of cloud costs to maximize business value

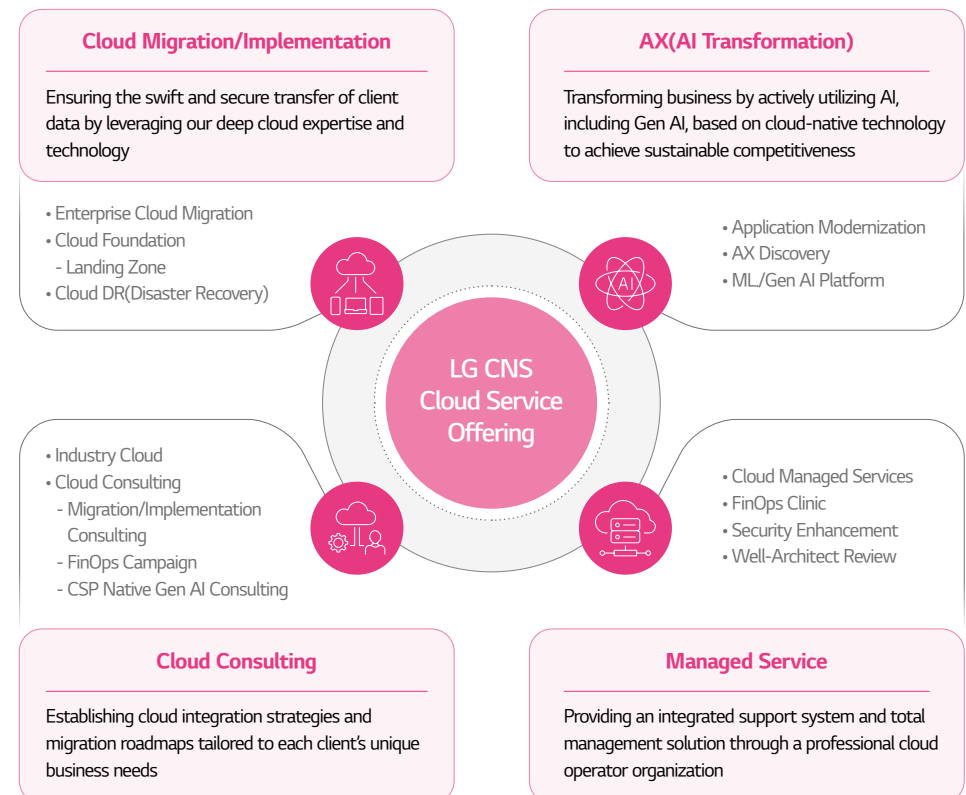

2) PoC (Proof of Concept): The process of demonstrating and verifying on a small scale whether a new idea or technology can be realized and function as expected

3) AIOps: A combination of 'AI' and 'Operations' that refers to the use of AI, such as natural language processing and machine learning models, to perform IT operations more efficiently and effectively

2025 Strategic Directions

LG CNS aims to lead our clients' cloud-based AX growth, ensuring they have a successful transformation experience. We will secure our position as the top AX provider by expanding our AX service offerings and identifying practical use cases and best practices to help clients realize tangible value. Furthermore, we will solidify our leading position in the domestic enterprise market by offering differentiated cloud services and technical capabilities, such as AIOps³⁾ automation and FinOps optimization, and enhance our status as a top-tier comprehensive cloud service provider globally.

CloudXper Service Area

ESG Value Creation with CloudXper

Financial Value

- Gain visibility and efficient tracking of cloud resources to reduce IT investments, improving clients' financial efficiency
- Enhance corporate competitiveness through cloud-based digital transformation

Environmental Value

- Reduce enterprise resources and energy usage with always-on cloud resource optimization services

Social Value

- Accelerate user adoption of the cloud by lowering technology barriers with flexible multi-cloud management services

LG CNS Smart Factory Platform

Factova¹⁾ is an integrated manufacturing ICT platform that combines the manufacturing expertise of LG Group affiliates. Having led smart factory construction projects for more than 60 domestic and international companies, LG CNS has now upgraded its smart factory technology, which had previously been focused on factory automation, by applying new information technologies to enhance factory intelligence.

LG CNS has implemented factory intelligence for its clients by applying technologies such as AI, big data, and IoT throughout the product manufacturing process. This standardizes business processes in the same industry and spreads them quickly and systematically to maximize the competitiveness of manufacturing companies. Factova consists of three areas : data, data information and intelligence. The data area collects data from various facilities and sensors to enable control. The data information area manages the entire manufacturing life cycle from planning to management. The intelligence area applies the latest technologies such as AI and big data to the collected data to make decisions for optimization.

Factova uses proven know-how from various industrial sites, including automotive, electronics, and construction machinery. In addition, Factova has standardized the production line to enable quick responses to rapidly changing market conditions. By modularizing the production lines of different factories, production lines can be easily added and combined depending on market conditions. Factova is designed to maximize work efficiency for factory users and manufacturing sites through a user-centric system that complies with international standards and integrates various types of data.

1) Factova : A compound word combining the words "factory" and "value"; Factova is a strategic brand that aims to provide differentiated customer value through the realization of a data-based, real-time autonomously operating factory

2) Digital Twin : A technology that copies and represents physical objects (things, spaces, environments, processes, procedures, etc.) as digital data on a computer; allowing them to interact with the physical objects in real time

3) AIDD (AI Driven Development) : An innovative development approach that applies AI technology throughout the entire process of analysis, design, development and testing, by leveraging various AI assistants, to optimize implementation processes

2024 Performance

LG CNS is implementing and expanding ultra-intelligent, ultra-automated factory systems for our clients through Factova, a smart factory solution that can respond to the rapidly changing manufacturing paradigm. By applying new technologies such as AI, Digital Twin²⁾, and IoT throughout the entire manufacturing process, we have built an intelligent factory environment and we have standardized the manufacturing environment through a platform service that enables integrated operations by leveraging our proven know-how from various industrial sites.

In 2024, we aim to enhance the virtualization and intelligence services of the Factova solution to implement an advanced solution, while reconstructing the next-generation MES system to create a more advanced, high-quality environment.

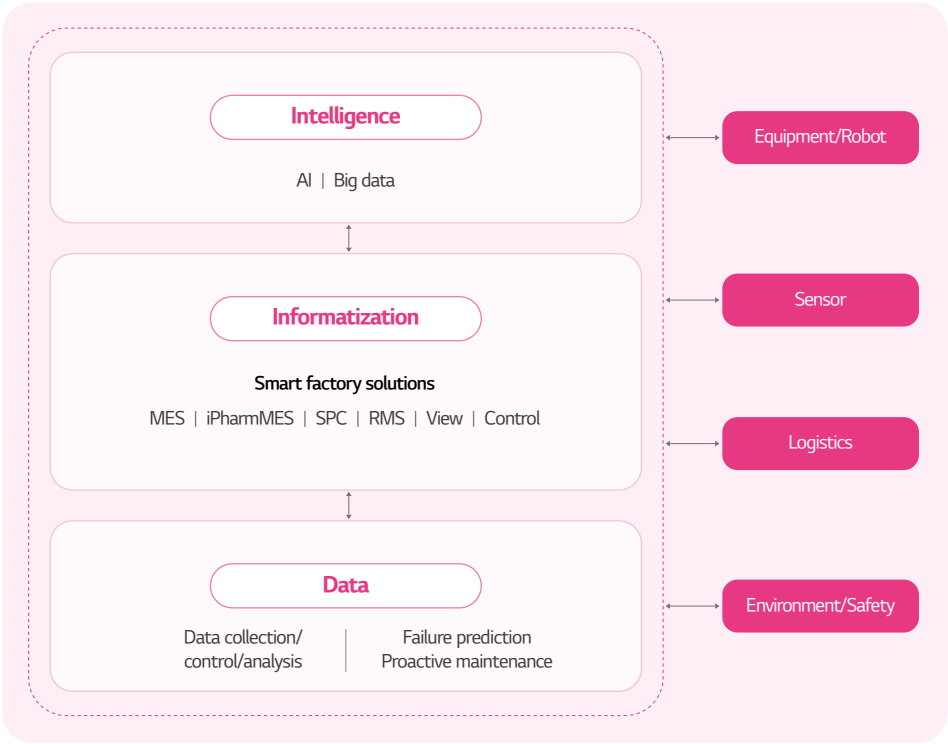

When it comes to virtualization, we have expanded the scope of virtual verification in the Virtual Factory to include equipment control systems, addressing on-site challenges. In the intelligence domain, we have applied LG CNS' AIDD³⁾ to the Factova solution to enable effective coding using AI.

2025 Strategic Directions

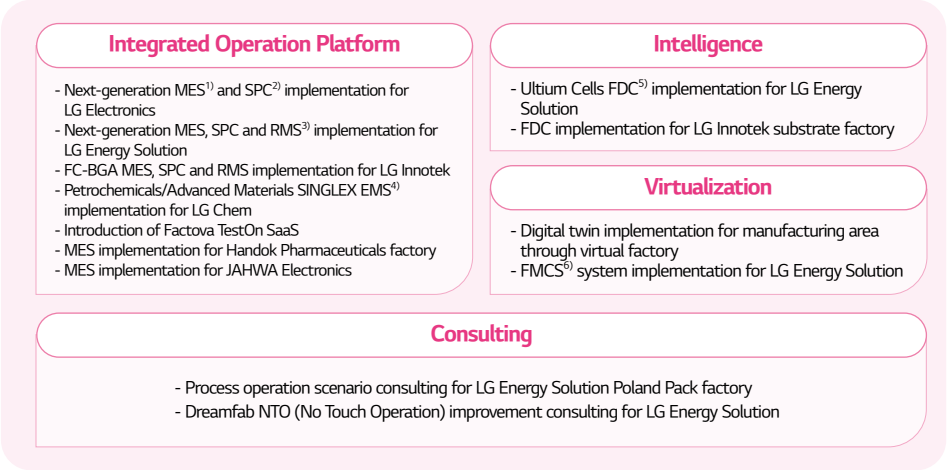

In 2025, we plan to expand the application of LG CNS' AIDD-based Factova solution, which was implemented in the field of intelligence, to industrial sites while also broadening the scope of AIDD application. We aim to continuously improve the manufacturing environment by increasing the adoption of the Factova solution among a wide range of clients without limiting the client base and expanding the scope of next-generation MES systems to cover a broader industrial range.

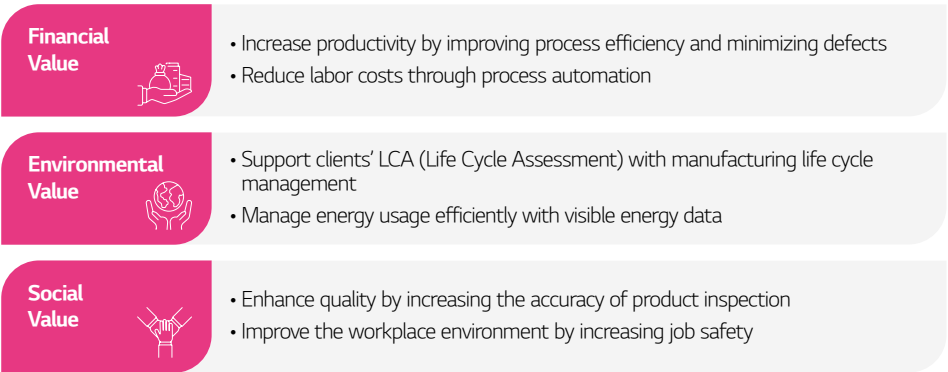

Service Offerings

Key Businesses

ESG Value Creation with Factova

1) MES : Manufacturing Execution System
2) SPC : Statistical Process Control
3) RMS : Recipe Management System
4) EMS : Equipment Management System
5) FDC : Fault Detection and Classification
6) FMCS (Factory Monitoring and Control System) : A system that provides a real-time overview of the factory at a glance from anywhere and at any time. Based on the factory layout, it provides equipment status/alarms, inventory status, and production performance/indicators

Smart Logistics

Total Logistics Solution Provider, LG CNS Smart Logistics Solution

LG CNS provides smart logistics solutions that go beyond responding to environmental changes to innovate warehouses based on the DX know-how LG CNS has accumulated as a leader in the IT industry.

2024 Performance

LG CNS has continuously expanded its new business portfolio to include K-beauty, food, and defense, by proactively proposing initial consulting and layout based on e-commerce, delivery, and 3PL¹⁾ best practices and consulting services. In terms of solutions, we have laid the foundation for improving our competitiveness in securing orders by expanding the application of our robot solutions and innovating the utilization of robots. Notably, we have further expanded on-site verification and the application of optimization algorithms through robot PoC²⁾. In addition, we have continued to advance logistics with robots by participating in process innovation for affiliated companies.

2025 Strategic Directions

In 2025, LG CNS plans to internalize core competencies to promote intelligent robot businesses, such as establishing an AI intelligent robot platform, developing robot applications, and strengthening simulation capabilities. We will secure our future competitiveness by expanding PoC and R&D to apply the latest automation solutions, such as humanoid robots, in the field. To overcome the limitations of the domestic distribution and logistics market, we will further expand our manufacturing process logistics automation business and focus more on the open business in North America. To this end, we will further strengthen our overseas business and maintenance capabilities, expand our pool of local partners and promote implementation led by our overseas business sites. Also, we will continue to diversify our production bases and expand our local manufacturing and processing infrastructure to maintain our cost competitiveness.

1

Providing a total service of consulting, design, construction, and operation

- Consulting : Establishment of N/W (base) strategy, operation strategy
- Warehouse design : Layout design based on optimal facility selection
- Implementation : Implementation of HW and SW for center automation, operation/maintenance, etc.

2

Line-up of advanced domestic and international solutions

- Optimized, intelligent facilities in urban area
- Differentiated, cutting-edge solutions - AutoStore, Pallet/Box Shuttle, AMR³⁾/AGV⁴⁾, Picking Robot, Sorting Robot, etc.
- Robotics integrated operations platform

3

Highest level of digital transformation competency

- Incorporating the latest information technologies such as AI and optimization for innovating logistics operation
- Minimizing up-front investment, increasing operational efficiency, and contributing to cost savings

1) 3PL (Third-Party Logistics) : A service that outsources logistics operations to an external service provider

2) PoC (Proof of Concept) : A procedure used to verify the feasibility of a specific idea or technology

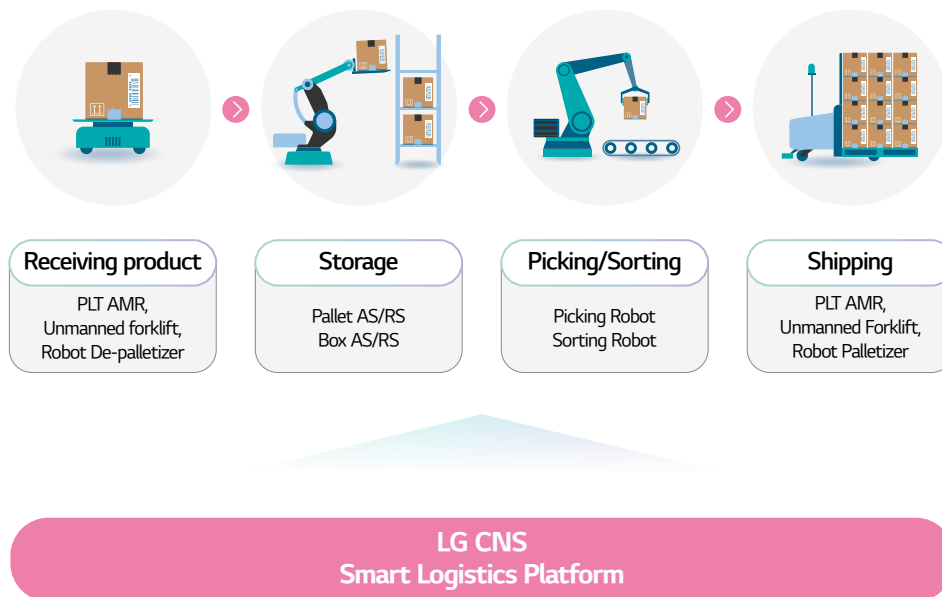

3) AMR : Autonomous Mobile Robot

4) AGV : Automated Guided Vehicle

Key Services

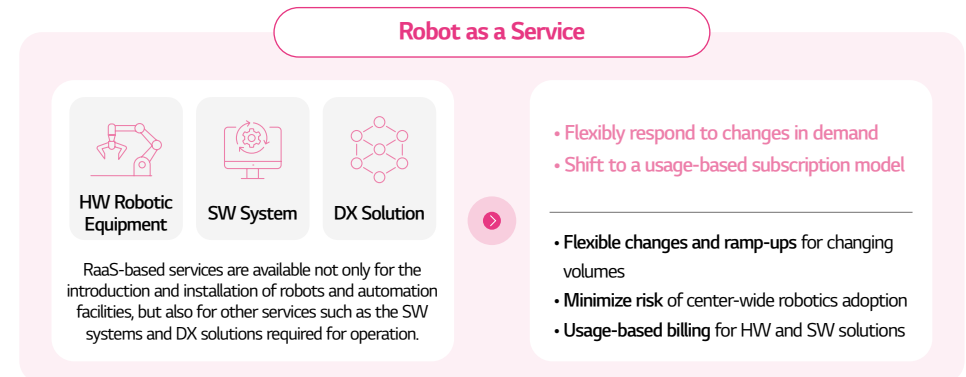

1 Full Automation Center

LG CNS designs and implements logistics centers that automate the entire process from receiving product to storage, picking/sorting, and shipping, using automated equipment that integrates the latest IT.

2 RaaS¹⁾

LG CNS' "Logistics Robot Subscription Service" allows clients to subscribe and use logistics robots as needed. LG CNS' RaaS reduces the initial costs of introducing logistics services for clients. In addition, we continue to lead the intelligent logistics automation market by implementing Robotic Hyper Automation with the optimal combination of advanced digital technologies such as AI, big data, and RPA and the latest robotics equipment to redefine automation and achieve business growth, profitability, and stability together.

ESG Value Creation with Smart Logistics Solution

Financial Value

- Reduce labor costs and increase worker productivity with automated facilities
- Minimize initial investment through robot subscription services, and optimize operating costs through on-demand usage
- Maximize space efficiency by adopting solutions that provide high-capacity product storage and operational efficiency

Environmental Value

- Reduce carbon emissions with short-distance delivery via MFC²⁾ and the introduction of best route algorithms
- Reduce waste by eliminating unnecessary inventory

Social Value

- Provide fast delivery to meet clients' needs using MFCs
- Reduce worker labor intensity and improve workplace conditions through logistics automation
- Improve service quality and increase customer satisfaction by utilizing AI sorting and inspection

1) RaaS (Robot as a Service) : Logistics robot subscription service

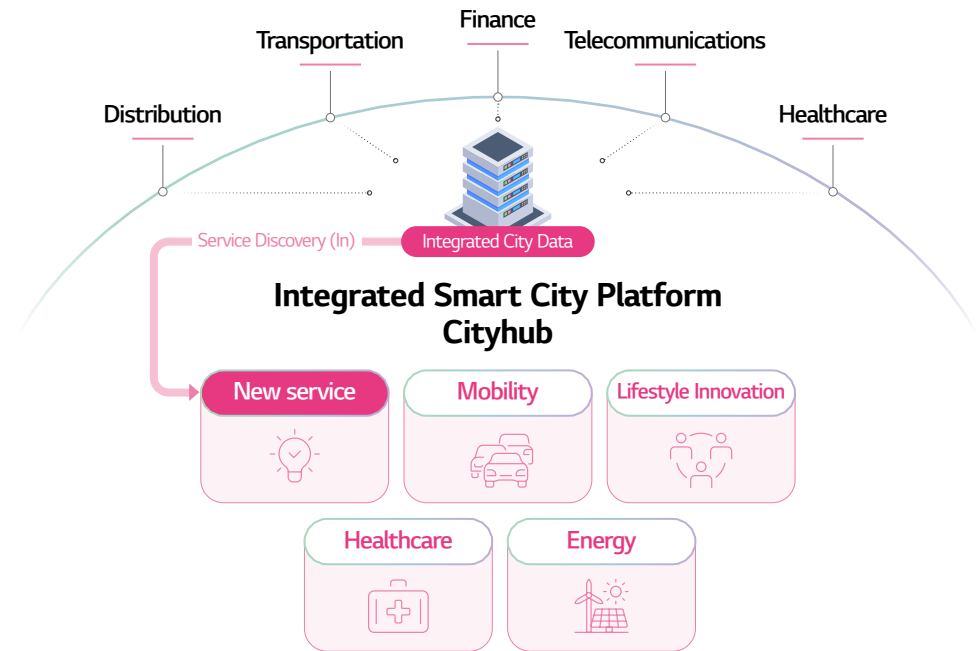

2) MFC (Micro Fulfillment Center) : Small-scale warehouse facilities in urban areas

Cityhub

LG CNS Smart City Integration Platform

Cityhub is a smart city platform designed for a sustainable urban development. It is the digital infrastructure that serves as the "brain" of a smart city. Cityhub, which adopts a "city as a platform" paradigm, collects various city data and provides an environment for AI analysis and common functions. Smart city services such as mobility, autonomous driving, healthcare and smart homes operate within this environment, enabling the continuous innovation of services. This enables the public to enjoy a safe and convenient urban lifestyle through smart city services based on Cityhub.

Platform City with Easy Service Plug-in and Plug-out

- Flexible response to citizens' needs and technological changes
- Open platform not dependent on specific suppliers

1) Living Lab : A lab in a living environment where users (citizens, residents) directly participate in defining problems, creating solutions, conducting experiments, and making improvements

Service Offerings

2024 Performance

- Implemented an AI data hub platform for the Sejong National Pilot Smart City
- Conducted a PoC¹⁾ for an overseas smart city control platform (Indonesia)
- Implemented a B2C-based smart farm integrated member management platform
- Developed a Cityhub-based, integrated vertical farm²⁾ platform
- Developed a Cityhub IoT Edge and applied it to the smart farming business

2025 Strategic Directions

- Develop a data ecosystem that collects and links data using an AI data hub platform
- Upgrade the integrated vertical farm platform
- Add AI functions such as vision and data analysis

Features of Cityhub

Data-driven

- Offers a full life cycle of data governance, from urban data collection to utilization
- Provides AI analysis environments and services based on collected big urban data

Flexibility

- Implements a flexible smart service system
- Provides Cityhub standard protocols, such as publish and subscribe, to enable each service to access city data flexibly

Leading-edge

- Proven records with various smart city projects in Korea and abroad
- Provides services certified by national authorities and compliant with international standards

Customized

- Reflects diverse clients' needs with a modular design
- Offers customizable features for data collection, sharing, and analysis

Scalability

- Ensures interoperability with other standard platforms and data, and facilitates connectivity with various urban devices and systems by complying with international standards

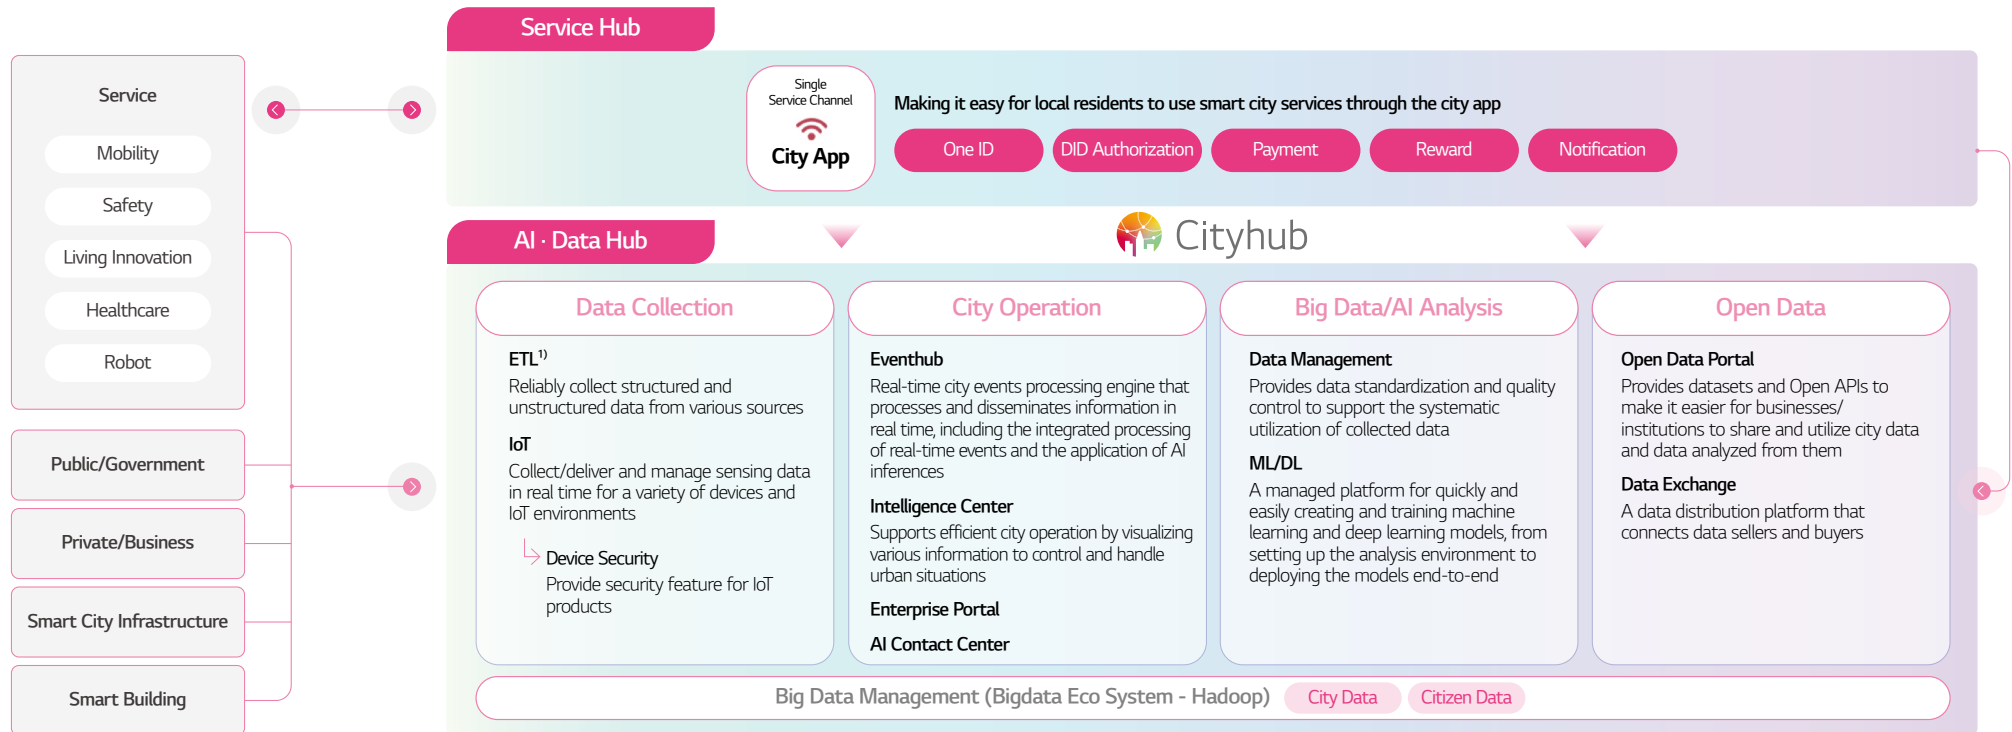

Continuous innovation

- Responds promptly to the latest technological changes
- Pursuing continuous improvement through expert organizations

1) PoC (Proof of Concept) : The process of verifying the feasibility of a new idea or technology

2) Vertical Farm : A new approach of farming where crops are grown in vertically stacked layers within a building

Cityhub Configuration and Services

1) ETL (Extract, Transform, Load) : A process of extracting data during data processing, transforming it to the required format, and loading it into another system

* International standards adopted by Cityhub :

Key Businesses

ESG Value Creation with Cityhub

Financial Value

- Reduce costs by optimizing city operations using AI
- Prevent duplication of investment in city operations by securing scalability through ensuring compliance with international standards

Environmental Value

- Reduce unnecessary energy use with AI/big data-enabled facility management
- Reduce air pollution and carbon emissions through intelligent transportation systems

Social Value

- Improve the quality of public services and the lives of residents by providing customized city services
- Increase public participation in policy-making and strengthen digital sovereignty by opening up data

MOP

AI-powered Advertising Optimization Solution

MOP (Marketing Optimization Platform), developed by LG CNS, is an intelligent optimization platform for advertising operations based on AI and mathematical optimization algorithms¹⁾. MOP maximizes the digital marketing performance of corporate clients by predicting future performance, setting advertising budgets, and automatically bidding on advertisements using models that predict future performance based on past performance data and mathematical optimization algorithms.

➤ 2024 Performance

Through our active solution sales and diverse marketing activities, LG CNS secured a 2.5% share of Korea's digital advertising market in 2024. We are among the top seven domestic advertising agencies in terms of digital advertising sales, and continue to grow steadily.

LG CNS has been focused on improving our clients' understanding and utilization of the MOP solution by providing guidelines for each function, as well as regular training and success stories.

➤ 2025 Strategic Directions

In 2025, we plan to capture a dominant market share of the domestic ad tech market and focus on generating revenue. To achieve this, we will collaborate with major advertising media companies to accelerate our growth, and launch MOP Pro to target major advertisers and advertising agencies.

¹⁾ Mathematical optimization algorithm : A mathematical technique used to find the optimal value through the mathematical modeling of complex decision-making problems with many constraints. This technology has proven effective in improving cost efficiency and productivity in various industries, including aviation, aerospace, and logistics

LG CNS employees introducing the digital marketing optimization platform "MOP"

Key Features of Service

We rely on mathematical optimization models, used in diverse industries to increase cost efficiency and productivity, to train customized AI models based on data from individual advertising accounts. This improves prediction accuracy and maximizes advertising efficiency.

AI Ensemble & XGB Boosting

- Generate hundreds of machine learning models using advertising data, and accurately predicts advertising performance with AI Ensemble
- Build optimal prediction models by analyzing the exposure patterns of advertisements by day and time with XGB Boosting

PELT Algorithm

- Provide powerful computational efficiency and detection capability, enabling fast and accurate determination of bidding cycles with the PELT (Pruned Exact Linear Time) algorithm

Mathematical Optimization Model

- Achieve the optimal results by calculating at least 350 possibilities for each keyword and ad item every day in order to meet various advertising goals
- Increase cost efficiency and productivity for various industries, including aviation, aerospace, and logistics

About the Service

MOP is transforming the marketing paradigm by providing a comprehensive suite of marketing tools including budget control, real-time reporting, monitoring, and intelligent bid optimization function aligned with marketers' advertising goals.

Optimization Algorithm

Shopping Ad Bid Optimization

Fully automates the budgeting and bidding processes for Naver Shopping search ads, maximizing purchase conversions and sales

Search Ad Bid Optimization

Automatically optimizes bids for each keyword in real time to achieve advertising goals

Budget Optimization

Recommends the optimal budget for each campaign across all media in order to achieve advertising goals

Tools

Shopping Ad Anomaly Detection

Monitors when shopping search ads are not delivered due to out-of-stock items, and sends notifications for such anomalies

Shopping Ad Negative Keywords

Provides the latest two weeks' performance and efficiency analysis data for each keyword to optimize each shopping search ad creative

URL/UTM Search Ad Anomaly Detection

Monitors errors in landing page and parameters linked to conversion tools, and sends notifications for abnormal situations

Insight

Budget Sensitivity Analysis

Analyzes how advertising performance responds to budget changes based on forecast data

Competition Analysis

Analyzes the intensity of bidding competition in the market on a daily basis based on advertising performance data

Attribution Analysis

Measures and analyzes the level of contribution to final conversions across multiple campaigns and channels on a daily basis

API Center

API - IN

Connects custom conversion data not tracked by media to MOP to enhance algorithm performance

API - OUT

Exports data stored in MOP and analysis results generated by MOP to the client's system

Major Clients

As of March 2025, MOP is being actively used by approximately 2,000 corporate clients and 100 advertising agencies.

ESG Value Creation with MOP

Financial Value

- Increase sales with intelligent, technology-driven advertising optimization
- Reduce labor costs through 24/7 automated operation

Environmental Value

- Eliminate unnecessary resource waste by reducing traditional offline marketing activities

Social Value

- Invest resources saved from advertising operations through MOP into core business operations to improve customer satisfaction

SecuXper

LG CNS Security Solution for Secure AX Environment

SecuXper is a customized integrated security service that provides a secure digital environment spanning from security consulting to system implementation, operation, and monitoring, enhancing the competitiveness of companies using AI and the latest technologies.

MSSP¹⁾ that provides end-to-end protection for client assets and businesses from the latest security threats

As an MSSP providing security services to various industries, including finance, the public sector, telecommunications and manufacturing, LG CNS offers customized end-to-end security consulting. Whether it is IT security for corporate infrastructure, OT security for manufacturing sites, IoT security for smart cities, or convergence security that combines all of these, we deliver professional consulting, security system implementation, operation, and monitoring services to safeguard our clients' business environments.

SecuXper provides optimized security services to clients 24/7 thanks to its ability to quickly detect and respond to the latest security threats, which are increasing with the acceleration of AX (AI Transformation). SecuXper also protects physical and digital assets with security technologies that have been tailored to each industry.

> 2024 Performance

Since announcing the launch of our MSSP business in 2021, LG CNS has expanded the cloud security business by leveraging our unique capabilities, achieving a pace of business growth that far exceeds the growth rate of the domestic security market and solidifying our position as an MSSP provider. In the OT security sector, we are adding to our track record and market reach by partnering with the leading domestic and international companies and security firms.

1) MSSP (Managed Security Service Provider) : A company that comprehensively performs security system operation and management

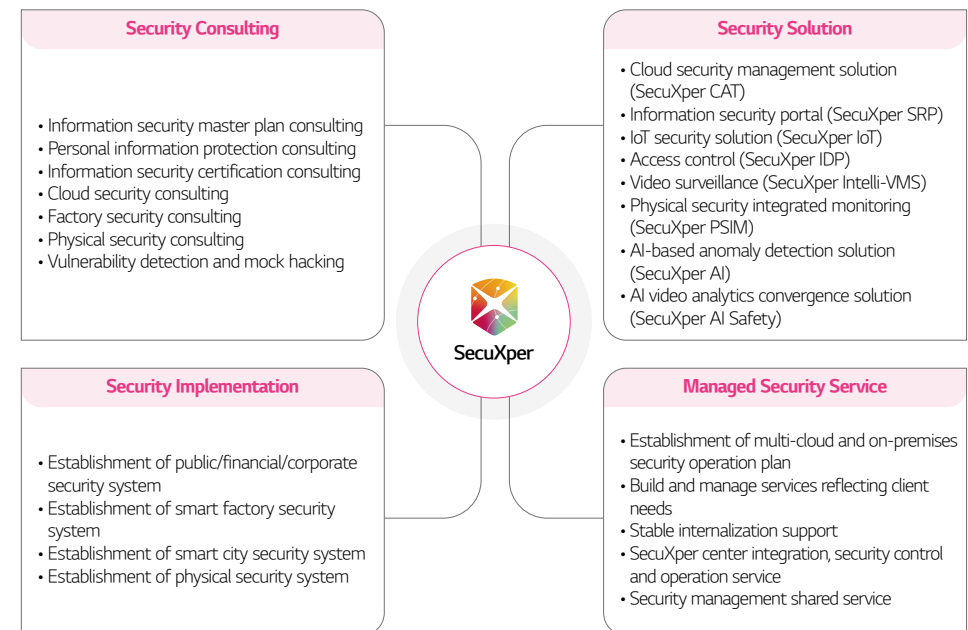

2) Zero Trust : A security framework that operates on the principle of "never trust, always verify"

We are also introducing new technologies, such as generative AI, to deliver services that quickly enhance customer value, and are securing guidelines and continuing development in other emerging technology areas, such as Zero Trust²⁾, to become the leading security AX partner for Korean enterprises.

> 2025 Strategic Directions

In 2025, LG CNS aims to provide differentiated security services tailored to our clients' diverse environments and requirements by strengthening our global security solution capabilities through partnerships that cover system implementation, operation, and monitoring. In addition, we will establish a PURPLE LAB within the SecuXper Hub (Integrated Security Center) to enhance our security penetration and response capabilities. We will then apply these capabilities to our monitoring services to lay the foundation for advanced security monitoring. Our goal is to establish SecuXper as the leading security solutions brand, become the premier MSSP in Korea, and ultimately, become a globally recognized MSSP.

Service Offerings

SecuXper Core Competencies

LG CNS SecuXper with best security experts and advanced AI technology, ensuring clients' safety

	RED Team consisting of 17 elite white hat hackers		BLUE Team specializes in studying attackers' patterns to improve defense systems
	PURPLE LAB, which collaborates closely with the RED and BLUE teams to analyze and research security threats		A solution that enables the safe use of generative AI, providing innovative security services using AX technology, such as an AI security solution that detects signs of information leakage in advance
	Synergy through collaboration with global partners such as Microsoft, Trend Micro, Palo Alto Networks, etc.		Comprehensive converged security services that integrate information security and physical security

About the Service

SecuXper Security Consulting

Three-dimensional, Customized Security Consulting and Diagnostic Services

Optimal security consulting tailored to clients

With over 20 years of security consulting experience and know-how, LG CNS identifies the root causes of security vulnerabilities and presents clients with a customized, integrated information security model. Through this, we help our clients build a global-level information security system.

Vulnerability assessment and penetration test

In 2025, LG CNS reorganized its existing Integrated Security Center into SecuXper Hub and expanded PURPLE LAB, a virtual organization that operates exclusively in cyberspace.

PURPLE LAB consists of a RED Team and a BLUE Team that conduct simulated hacking attacks and defense training. The RED Team makes wide-ranging attempts to breach systems, while the BLUE Team defends against these attacks, diversifying penetration scenarios and developing countermeasures. The BLUE Team also performs threat hunting activities to proactively detect external security risks, such as malware infiltration and hacking attempts.

Since establishing the RED Team in 2021, LG CNS has conducted more than 600 mock hacking and penetration tests. We have also developed countermeasures against potential penetration scenarios in several domains, including cloud systems, software as a service (SaaS), and manufacturing facility production networks. Leveraging these capabilities, LG CNS provides security consulting and diagnostic services to domestic enterprise clients across diverse industries, enabling them to swiftly identify and address security threats at various touchpoints, including PCs, mobile devices, servers, and networks.

SecuXper Security Management

Close Support from Security Experts and 24/7 Managed Security Service to Ensure Business Stability

Managed security service

The managed security service provides guidance in the latest security trends and ensures the stability of client businesses by detecting and responding to security threats. It is a 24/7, year-round service on-premises¹⁾ and offered in the cloud environment.

Security management shared service (Shared)

This is a service in which LG CNS security experts perform essential security management tasks for companies that lack security-specialized human resources. LG CNS' top security experts provide close support in areas such as personal information protection, cloud security, vulnerability assessment, and penetration testing. The service covers a wide range of security management tasks from a PDCA (Plan-Do-Check-Act) point of view.

SecuXper Security System Implementation

Comprehensive Security Services Backed by Proven Design Experience

Smart factory (OT) security system

LG CNS, which has pioneered OT (Operational Technology) process security within the LG Group, has a Solution Suite for OT security. The Solution Suite consists of 16 modules and 26 solutions categorized into the areas of hacking and malware response, core technology protection, and integrated security management, and provides comprehensive security solutions tailored to the OT environment and needs of companies.

Security systems tailored to industry and business size

LG CNS provides a security system that is rooted in proven design experience and development procedures that can be applied to various industries and business sizes. This enables clients to use safe and reliable security systems that also consider operational efficiency.

Cloud security services

LG CNS takes full advantage of the native security services of cloud service providers such as AWS, Azure, and GCP to protect data and systems in the cloud environment while enabling the flexible and efficient use of cloud services.

Key Businesses

 Establishment of Morocco Cyber Safety Center	 Deployment of AI-powered Facial Recognition Access Control at Hyundai Glovis	 SecuXper AI Safety Business of LG Display
 Establishment of CCTV Control Center for Eunpyeong-gu Office in Seoul	 Implementation of Access Control Solution at Yonsei Medical Center	 Penetration Testing at LG H&H Factory/Facility
 Shinhan Bank Global Managed Security Service Project	 Penetration Testing at Incheon International Airport Corporation	 Establishment and Operation of LG Group Security Operation Center
 Implementation of Financial Managed Security Service System of Financial Security Agency	 Cloud Migration Information Security Consulting for Starbucks	 Establishment of Domestic/Overseas Factory Security System of LG Group
 IT, OT Security Consulting for Hanwha Solutions	Global Partnership & Alliance 	

ESG Value Creation with SecuXper

Financial Value

- Prevent financial losses from security incidents, including confidential information leaks, system paralysis, and service disruptions
- Focus on core businesses and improve clients' work efficiency by meeting their security needs

Environmental Value

- Reduce unnecessary energy use by eliminating on-premises security equipment and facilities
- Reduce the risk of environmental destruction from large fires by preventing safety incidents in industrial facilities and data centers

Social Value

- Prevent social issues like privacy breaches by protecting clients' data
- Enhance corporate system security through services such as security monitoring, simulation hacking, and vulnerability diagnosis
- Encourage corporate social responsibility and maintain client and public trust by maintaining corporate stability

1) On-Premises : Building a physical server system in a company's or institution's computer room and using it according to the organization's needs

Enterprise Solutions

LG CNS Enterprise Solutions Supporting Clients' DX

LG CNS empowers our clients' DX (digital transformation) with self-developed solutions, including the testing solution PerfectTwin, the framework DevOn, and the middleware solution LENA. We are also leading the way in digitally transforming traditional business ecosystems using cutting-edge information technologies.

➤ 2024 Performance

LG CNS has a portfolio of enterprise solutions centered on testing solutions, infrastructure, and development frameworks, based on our extensive know-how and technical expertise. We serve leading companies in Korea and abroad based on this portfolio.

Since the full-scale launch of our solution business in the domestic market, our enterprise solution sales have grown at an average annual rate of approximately 30% (based on direct and indirect revenue). By diversifying customer use cases through partner collaboration and running a technology partner development program, we have enhanced partner capabilities and solidified our position as an enterprise solution provider.

In 2024, we concentrated on developing and upgrading our existing offerings into global solutions, and as a result, we established a global business execution system. Notably, in June 2024, we unveiled "PerfectTwin ERP Edition" to global clients at the SAP Sapphire 2024 event held in the United States, marking our official entry into the U.S. market. Based on our leading position in the domestic solution market, we aimed to achieve early success through global expansion and lay the foundation for expanding our enterprise solution portfolio.

➤ 2025 Strategic Directions

In 2025, we aim to continue growing our enterprise solutions business and pursue full-scale expansion into the global market. We will secure domestic and global client references, strengthen our capabilities, and lay the foundation for expanding our enterprise solutions portfolio.

In 2025, by strengthening our new offerings and solution portfolios, we aim to create global business opportunities and enhance our technological competitiveness. We plan to design new solution offerings based on client and partner requirements and feedback to expand our solutions portfolio. Key initiatives include the launch of LENA Open Edition, expanding from the commercial middleware market into the open-source space, and advancing the PerfectTwin ERP Edition offering based on our experience with domestic SAP implementations. We will strengthen the competitiveness of our solutions through technological innovation to provide sustainable value to our clients and secure growth momentum both domestically and internationally.

About the Service

PerfectTwin

PerfectTwin is LG CNS' unique, automated large-scale transaction verification solution designed to support the flawless go-live and operation of IT systems. It can be effectively applied to a variety of IT projects, including next-generation system implementation, ERP conversion, cloud migration, infrastructure upgrades, and SM (System Management) operations.

PerfectTwin is a solution developed to answer the question : "How can we effectively verify, before go-live, that the next-generation (to-be) system under development will operate reliably and identically to the current (as-is) system?"

Many projects struggle with deciding whether the system can be go-live even in the final stages, due to a lack of confidence in system quality.

PerfectTwin reproduces real-world user transactions and external interfaces in the to-be system, allowing teams to identify potential defects before go-live and raise system reliability and quality to the level of the current system. Additionally, PerfectTwin supports transaction-based business scenario creation and automated regression testing for existing systems, advancing the verification process and enhancing the quality of IT operations.

PerfectTwin Solutions

PerfectTwin Standard Edition | This is a testing solution that verifies functional accuracy and response time by replaying actual transaction data in the next-generation system. It identifies potential defects before they occur during go-live and operations, enhancing system reliability and quality to match that of the current system.

PerfectTwin ERP Edition | ERP Edition is a test automation solution specialized for SAP S/4HANA conversions. By applying a transaction replay method, it enables faster and more scalable testing than UI Replay method¹⁾. It also reduces costs through automation, expands test coverage using large-scale data, and enhances system quality through iterative testing.

1) UI Replay method : A test automation technique that records user actions at the screen level and replays them exactly as recorded

Middleware Platform

LENA

Developed by LG CNS, LENA is a cloud-oriented enterprise WEB/WAS¹⁾ solution based on global standards. LENA provides integrated offerings across the entire commercial and open-source middleware market in response to the expanding open-source ecosystem.

LENA

LENA is a cloud-oriented enterprise WEB/WAS solution based on global standards. Its advanced operational management features improve ease of operations, while its high-availability architecture ensures reliable service delivery.

LENA Open Edition

LENA Open Edition is an open-source middleware support offering. It offers technical support services ranging from open-source adoption consulting to implementation and operations. To ensure a seamless system transition, it supports cloud and container²⁾ environment optimization and enhances operational efficiency and quality through integrated multi-server management.

TunA

TunA is an integrated monitoring solution that provides advanced capabilities to effectively manage enterprise IT systems.

TunA provides key capabilities that ensure visibility into various IT components—such as end users, applications, cloud, and infrastructure—and enable stable system operation. It supports a variety of operating environments, from legacy to cloud/container-based, and excels in improving IT service quality and managing application performance.

J-Jobs

J-Jobs is a workload automation solution that orchestrates and automates business processes in real time.

J-Jobs supports various templates, events, and platforms, and offers web-based features that make it easy to define workflows. Its convenient customization features enable efficient enterprise-wide batch operations, making it a cloud-oriented solution.

1) WAS (Web Application Server) : A middleware server that executes business logic between the web server and the database server

2) Container : A lightweight virtualization technology that packages applications and their application environments so the application can run consistently across different environments

3) Batch : A method of executing tasks in bulk at scheduled intervals

4) Center Cut : A method of extracting and transferring only the necessary data from the primary system to external systems

5) Post-Processing : Supplementary tasks executed after real-time processing is completed

6) OSS (Open Source Software) : Software with publicly available source code that can be freely used, modified, and distributed

7) AM/MSA : Application Monitoring/Microservices Architecture

Framework

DevOn

DevOn Framework is a proprietary Java framework developed by LG CNS. Leveraging extensive project experience, it provides specialized features for business operations, along with the stability and efficiency required for large-scale projects.

DevOn Enterprise

DevOn Enterprise is a flexible, high-performance framework optimized for the financial sector. It provides finance-specific modules, including online processing, batch³⁾ jobs, center-cut⁴⁾ extraction, and post-processing⁵⁾, all proven through extensive real-world use, and delivers the stability and reliability required by financial systems. Its flexible architecture enables custom component configurations tailored to client needs.

DevOn Boot

DevOn Boot is a lightweight, OSS⁶⁾-based framework designed for AM/MSA⁷⁾ environments. It is the first commercial container-oriented framework released in Korea, with a distinguished track record in the field. We continue to expand features that support application modernization, including distributed caching, embedded WAS, and SAGA modules for distributed transaction processing.

DevOn IDE

An execution-centric platform, DevOn IDE is an integrated development platform exclusive to LG CNS that seamlessly connects, visualizes, and automates the entire development process from analysis to unit testing.

ESG Value Creation with Enterprise Solutions

Financial Value

- Enhance productivity and reduce labor costs through business process automation
- Enhance operational efficiency and reduce costs through resource optimization and usage-based billing

Environmental Value

- Enhance infrastructure efficiency and reduce power consumption by optimizing cloud operations
- Reduce server footprint and boost energy efficiency through server utilization optimization and MSA adoption

Social Value

- High-volume transaction handling and failure diagnostics ensure system reliability and enhance the end-user experience with web applications
- Improved system reliability prevents failures, service disruptions, data loss, and rework

LG CNS Enterprise SaaS Integrated Platform

SINGLEX, a cloud-based SaaS (Software as a Service)¹⁾ integrated platform, has a name that is a portmanteau of "SINGLE" and "COMPLEX." As LG CNS' subscription-based IT service, SINGLEX integrates diverse and complex businesses into a single platform. It incorporates LG CNS' expertise and extensive business experience with the best global solutions to provide services across all business areas, including sales, purchasing, manufacturing, and human resources, making work smarter and more efficient.

2024 Performance

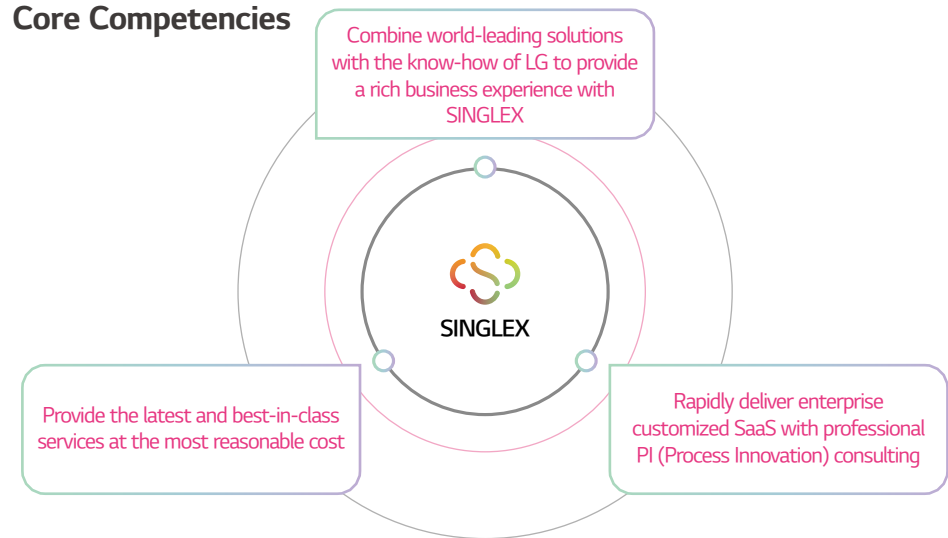

In 2024, we provided the LG Group with global, best-in-class SaaS solutions for sales, purchasing, manufacturing, quality, and HR. We also continued to secure domestic enterprise clients. We completed planned upgrades to address clients' pain points and increase their satisfaction.

2025 Strategic Directions

In 2025, we plan to upgrade our SaaS system by focusing on discovering AI use cases to increase the competitiveness of our clients within the LG Group. We also aim to solidify our position as a leading SaaS provider by offering value to small- and medium-sized businesses in all industries across Korea, beyond the large enterprise market.

1) SaaS (Software as a Service) : A method of software delivery in which software is accessed online on a subscription basis, so that the user can pay for only what they use through accessing the cloud, rather than buy software on their own devices

Core Competencies

ESG Value Creation with SINGLEX

Financial Value

- Reduce upfront investment costs with no hardware or infrastructure required
- Offer clients continuous upgrades at a low operating cost through a pay-as-you-go subscription service

Environmental Value

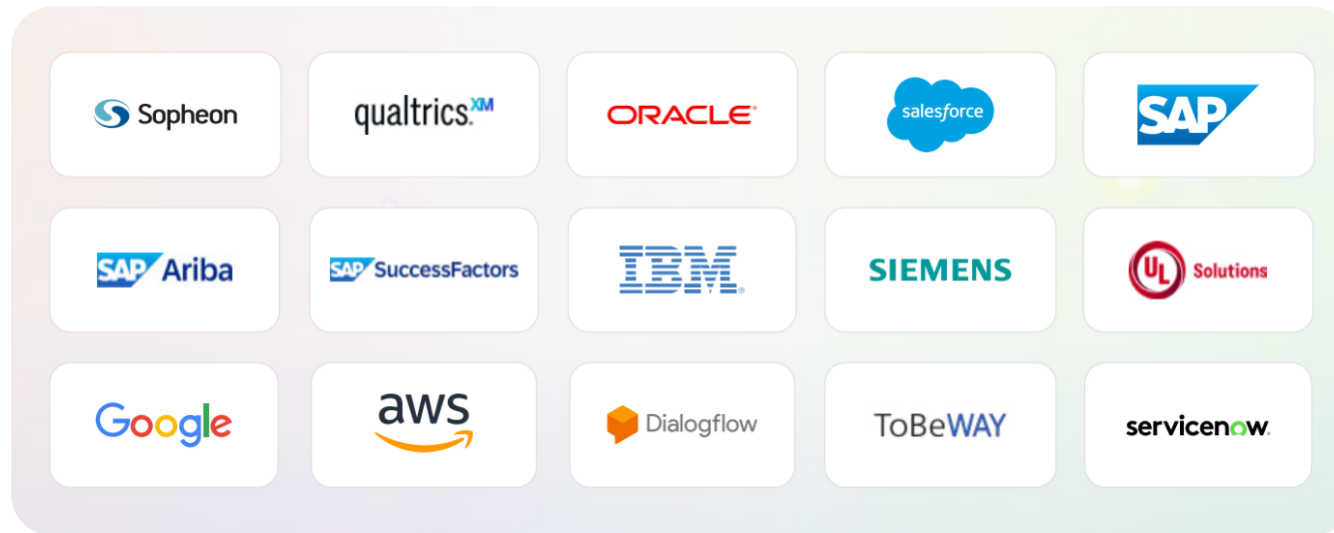

- Reduce resource waste by using public cloud, eliminating the need to build and dismantle individual infrastructures
- Save energy through large-scale system integration and optimization based on a single platform

Social Value

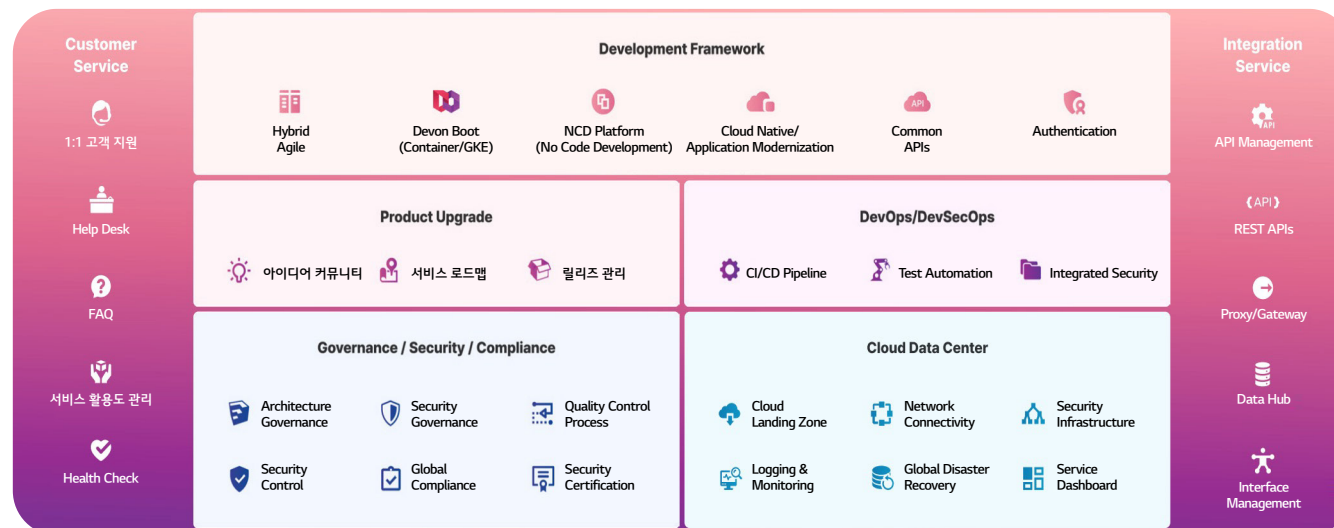

- Improve customer satisfaction by providing global best-in-class services tailored to clients' businesses
- Secure IT operation stability by providing services optimized for clients' IT environments

About the Service

We provide customized SaaS services that are optimized for the corporate value chain, by combining LG's best practices with the top global solutions in all business areas.

We provide a reliable SaaS experience with the SINGLEX platform, which efficiently and reliably integrates and connects various SaaS, solutions, and legacy environments.

FinXper

**LG CNS' Digital Solutions for
Financial Services Combined with
Industry Expertise and the Latest AX Technology**

FinXper is LG CNS' digital solution for financial services, designed to leverage our expertise in financial services and IT in support of the rapid digital transformation of financial service companies, enhancing our clients' competitiveness. The name is a portmanteau of the words "Finance" and "Expert"

➤ 2024 Performance

LG CNS is accelerating business innovation in the financial services industry by successfully implementing next-generation systems for major financial companies through the modernization of core systems. We have established an IT system that swiftly responds to changes in the financial services industry by implementing large-scale next-generation back-end and front-end systems leveraging cloud-based MSA technology and agile development methodologies, as well as business systems that utilize AI technology. In addition, we provide stable and efficient operation and maintenance services through long-term, integrated maintenance engagements for SC Bank, Hyundai Card ITO project, the Korea Financial Telecommunications and Clearings Institute, and Tongyang Life. Furthermore, we support building customized AI platforms and services for financial institutions. This enables the swift and reliable implementation and operation of AI analysis environments, increasing the value of AI-driven financial services.

➤ 2025 Strategic Directions

As an AX partner with unparalleled financial expertise, we are leading the digital transformation of the rapidly evolving financial services industry and supporting our clients' business success. We will establish a GenAI data platform tailored to financial institutions and provide AX services centered on the user experience to enhance new business value and strengthen the user experience for clients. In addition, we are building trust with global banks and creating new opportunities for business collaborations by setting up IT infrastructure for the overseas branches of domestic banks, and banking systems for overseas local banks.

We aim to innovate across all areas of financial services industry through AI, and combine AI technology with the industry's leading cloud and data technologies to assist financial institutions succeed in their AX business.

Major Clients

Bank

Insurance

Card/Capital

Securities

ESG Value Creation with FinXper

Financial Value

- Increase productivity by automating business processes of financial services
- Improve employee productivity and efficiency by building a system based on generative AI technology

Environmental Value

- Reduce energy use and carbon emissions of offline branches by expanding digital channels for financial institutions
- Reduce energy consumption and optimize the carbon emissions generated by corporate IT systems by migrating to the cloud and optimizing operations

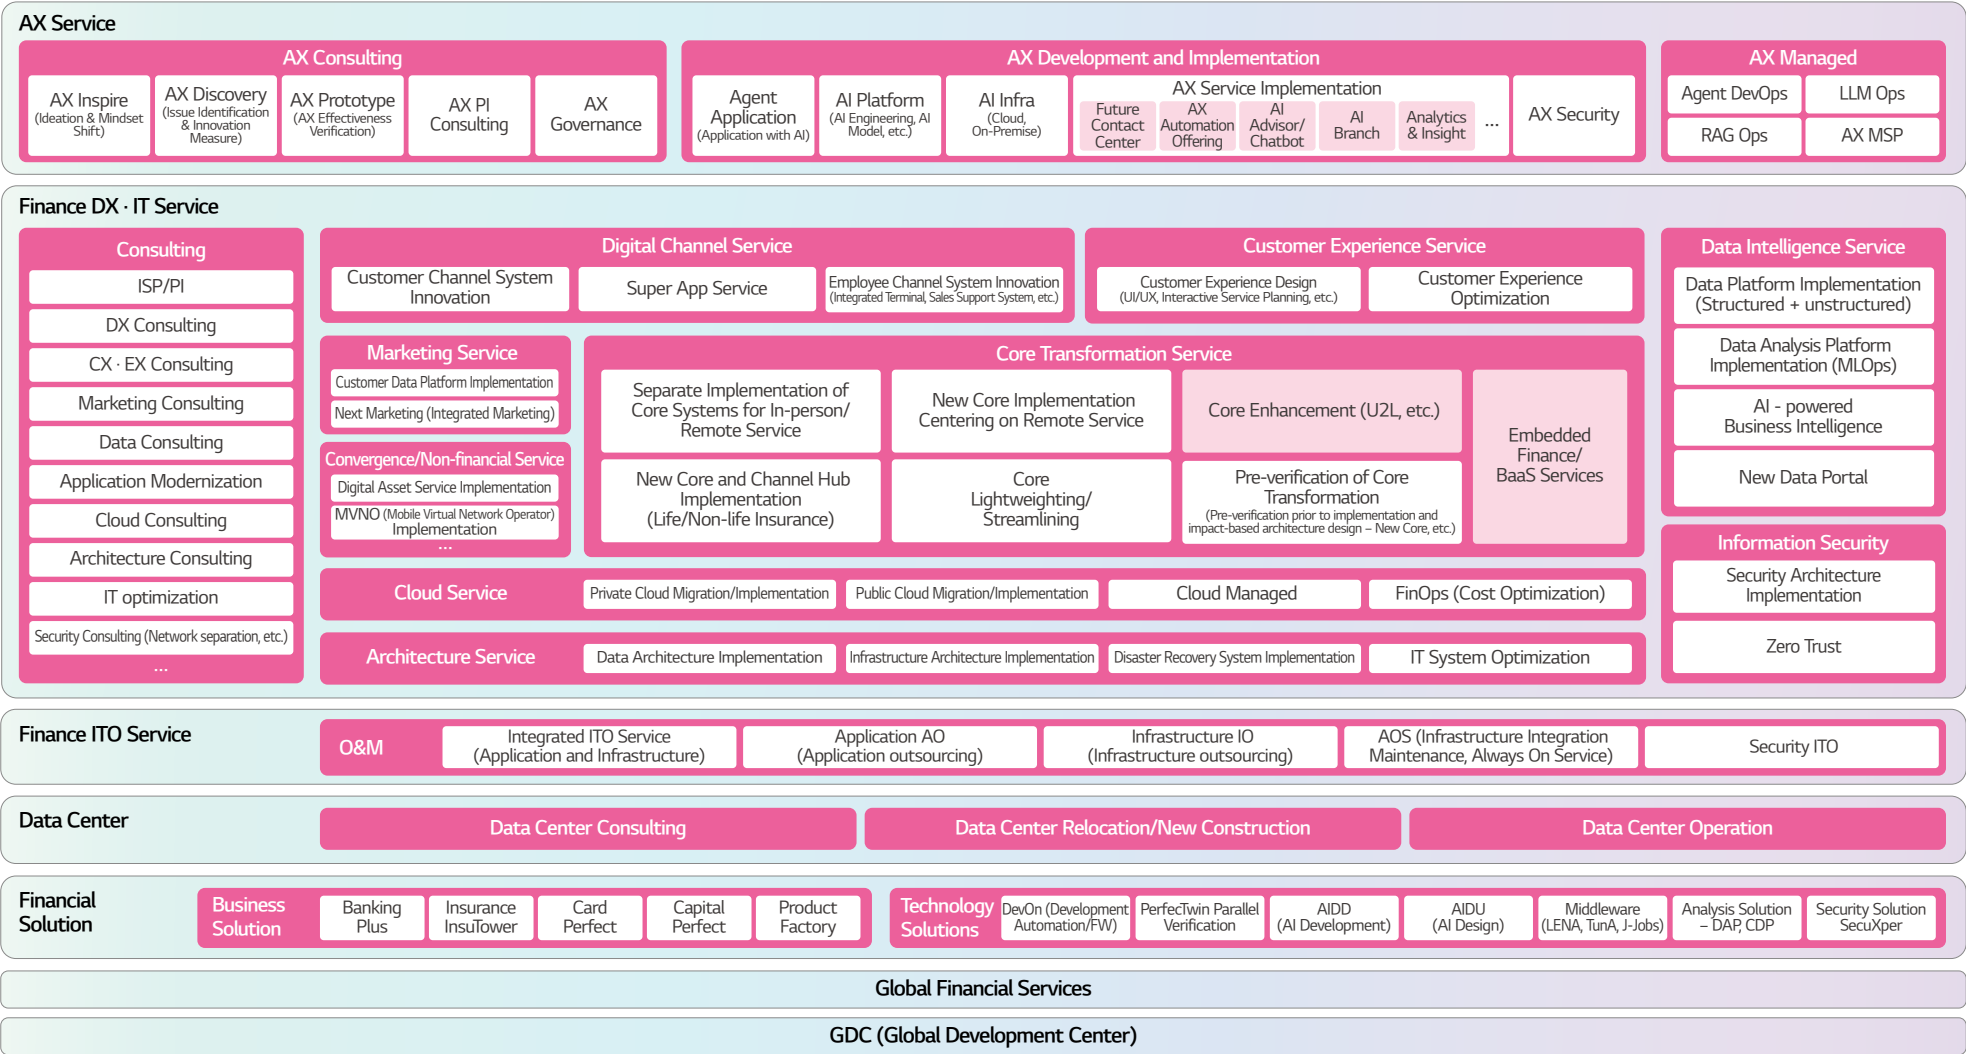

Social Value

- Enhance accessibility and convenience for users unfamiliar with digital devices, such as the elderly, by building user-friendly digital financial channels
- Prevent financial fraud and crime by building financial systems with AI technology
- Establish a secure financial system that can withstand external hacking attempts and counterfeiting threats by building financial systems (central bank digital currency, tokenized securities system, etc.) using blockchain tech

FinXper Service Offerings

FinXper provides a wide range of services, from services designed for the financial service industry to platforms and solutions specializing in new technologies and architectures such as AI and cloud computing. We leverage our leadership in these technologies to effectively support the DX of financial institutions. Our team of experts has years of experience and technical capabilities, and is committed to continuous quality improvement, providing integrated solutions that combine our proprietary solutions with global solutions.

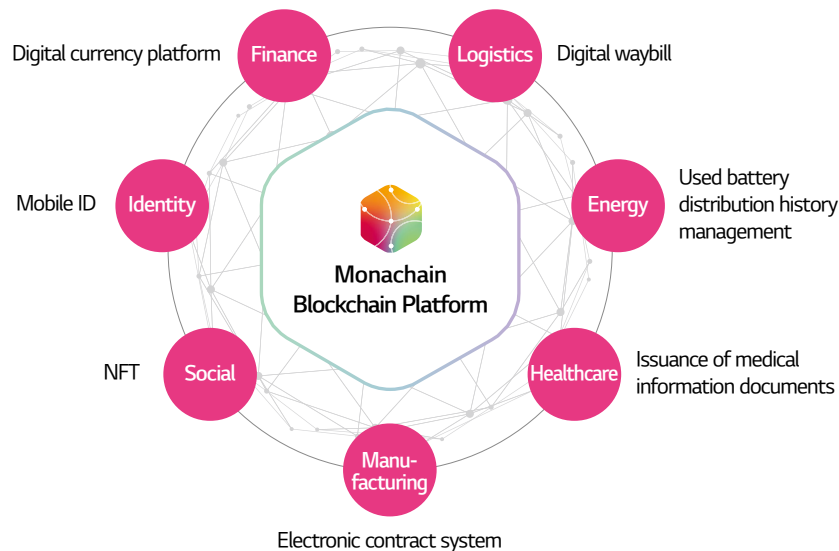

Monachain

LG CNS Blockchain Solution Optimized for Enterprises

LG CNS is creating customer value with practical services such as digital identity authentication and digital asset trading through blockchain. By doing this, we are leading a safer and more reliable digital ecosystem.

About the Service

Blockchain Consulting Methodology | Providing Customized Solutions through Blockchain Consulting

LG CNS has developed a blockchain consulting methodology to innovate clients' work and apply new business models. The methodology provides the optimal solutions based on the characteristics of clients' business and IT environment, from the establishment of blockchain technology strategy to implementation, operation management, and platform-type services in various industries such as finance, public sector, communication, and manufacturing.

- Professional consulting
- Discovering use case

- Supplying Monachain
- Establishing infrastructure network environment

- Developing and operating systems based on blockchain technology

Tidit | LG CNS' DID-based Subscription Service for Identity Verification

Tidit provides optimal solutions depending on the business and IT environment. It is a mobile subscription-based identity verification service developed by LG CNS that applies blockchain DID¹⁾ technology for various industries such as finance, public, telecommunications, and manufacturing. Tidit allows users to own their identity information directly on their smartphones, and when needed, they can verify their identity by providing only the information required. With the Tidit mobile employee ID, users can enter the office building, pay at in-house merchants such as cafeterias and cafes, and use in-house services such as multifunction printers and fitness centers. We are expanding the scope of use to include verification services for online work systems.

First Identity Verification Service Mobile Employee ID Card Service

- Implementing the LG CNS standard secure access protocol
- Linking with terminals at convenient facilities
- Expanding the service inside/outside the company with DID certificate validation

LG U+

2024 Performance

In 2024, LG CNS produced remarkable achievements in digital finance and blockchain technology, blurring the lines between finance and technology.

In the area of CBDC¹⁾, we were awarded a project by the Bank of Korea and successfully built a CBDC network platform based on our self-developed enterprise blockchain, the Monachain Platform. Through this project, we developed next-generation infrastructure for central bank digital currencies, laying the groundwork for innovations in the financial system.

In the STO²⁾ area, we built an STO system for tokenized securities guidelines and new businesses in collaboration with Mirae Asset Securities. Using the Monachain Platform, we developed a comprehensive system for entering the tokenized securities market, effectively supporting Mirae Asset Securities' expansion into the digital asset business.

Implementing the STO system has become an important milestone in opening new horizons for the blockchain-based digital securities market in the domestic financial sector. LG CNS provided an integrated solution that can manage the entire lifecycle of tokenized securities, including asset tokenization, smart contract³⁾-based rights management, and real-time payment systems, by leveraging the core technologies of the Monachain Platform, which features security and scalability. The system was designed with compliance and transparency as top priorities. It meets the guidelines of the Financial Services Commission and provides a safe and reliable digital asset trading environment for institutional and individual investors. With this new infrastructure in place, Mirae Asset Securities is now positioned to offer innovative financial services that transcend the boundaries between traditional and digital finance, by issuing, distributing, and managing tokenized securities.

In the ESG sector, we have developed a carbon emissions trading system based on distributed ledgers and smart contracts, confirming that the system can efficiently manage rights such as emission allowances, Korean Credit Units, and payment registries. In addition, we have built a system using the RTGS (Real Time Gross Settlement) model, a new payment settlement model, operated a pilot market with several securities firms and commercial banks, and confirmed that the system can enhance the reliability and transparency of financial transactions.

1) CBDC (Central Bank Digital Currency) : A digital currency issued by a country's central bank, in contrast to private cryptocurrencies such as Bitcoin

2) STO (Security Token Offering) : Issuance of tokenized securities

3) Smart Contract : A blockchain-based automatically executed contract, which is a digital protocol that automatically executes without an intermediary when defined conditions are met

2025 Strategic Directions

LG CNS is conducting real-world transaction pilot tests using tokenized deposits and vouchers with seven commercial banks, based on the CBDC system and digital voucher management platform that LG CNS developed jointly with the Bank of Korea in 2025. In addition, we are eager to participate in the Agora project, led by the Bank for International Settlements (BIS), to gain experience in innovative financial technology and global collaboration. This will contribute to the development of future financial infrastructure.

We also plan to actively pursue technological development and business expansion in the STO field to expand the scope of our financial innovation. We are leading the DID (Decentralized Identity) market through the new offering of our subscription-based identity verification service, Tidit. Our exploration of business opportunities that will promote sustainable growth and social value creation by applying blockchain technology to the ESG field is an ongoing effort.

In 2025, we will continue to innovate based on digital finance and blockchain technology, and are committed to building a more advanced financial infrastructure and expanding our global market.

ESG Value Creation with Monachain

Financial Value

- Facilitate fast and secure transactions with digital currency platforms
- Reduce bank fees with CBDC issuance
- Reduce unnecessary costs with blockchain services specialized for business environments, such as NFTs

Environmental Value

- Reduce unnecessary paper usage with electronic signatures/contracts
- Reduce plastic use with blockchain-based mobile employee cards
- Reduce carbon emissions by building a decentralized energy system and implementing smart contracts through blockchain technology

Social Value

- Enhance transparency of transactions and promote fair transaction based on crypto technology
- Enhance transparency of carbon assets and increase efficiency of trading operations by utilizing distributed ledgers

SUSTAINABLE SUPPORT SOLUTIONS

- 44 Net Zero Management System
- 45 Product Carbon Footprint Calculation System
- 46 Aimos, AI Iron Scrap Grading Platform
- 48 Enerdict, Virtual Power Plant Solution
- 49 LG ESG Intelligence

Net Zero Management System

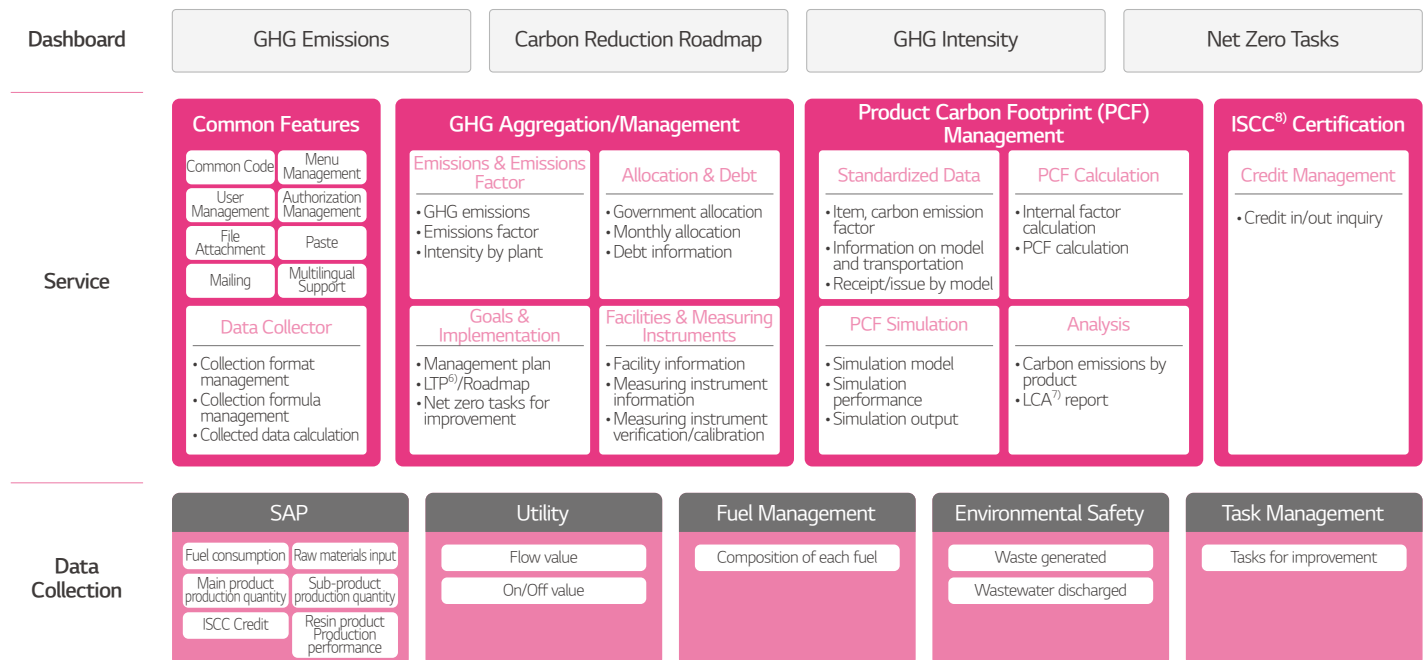

LG CNS successfully developed a Net Zero¹⁾ Management System for Hanwha TotalEnergies Petrochemical based on Factova ESG²⁾. With this system, Hanwha TotalEnergies Petrochemical is now better equipped to respond to the requirements of the national greenhouse gas (GHG) emissions trading system, global environmental regulations, and the needs of customers.

Hanwha TotalEnergies Petrochemical calculates its GHG emissions at each site every year and reports them to the government. The company also calculates its monthly GHG emissions to monitor the debt costs associated with purchasing emission credits. In addition, the company is required to set and manage GHG reduction targets across the entire organization. Recently, it has become important to calculate the carbon footprint of each product in order to respond to global environmental regulations and customer demands. Through LG CNS' Net Zero Management System, Hanwha TotalEnergies Petrochemical has established a standardized process for calculating GHG emissions and carbon footprint, and has automated the calculation process by collecting performance data from the Transaction Processing System³⁾.

Benefits of the Net Zero Management System

- Ensuring data accuracy : The system minimizes manual work and ensures the accuracy of data by using the Data Collector module to automatically collect the data required to calculate GHG emissions and carbon footprint from the transaction processing system.
- Supporting simulation : The system offers a simulation feature that displays changes in PCF (Product Carbon Footprint) resulting from alterations to raw materials or transportation methods, assisting in decision-making. It also supports comparisons of calculated emissions for the same product using different calculation methodologies⁴⁾, enabling an immediate response to the specific methodology requirements of clients.
- Responding to system expansion : It is possible to respond to future factory and facility expansions through various modeling⁵⁾ management approaches within the system, without system modifications or additional development.

- 1) Net Zero : Achieving a balance between the amount of GHGs emitted and absorbed, thereby making net emissions equal to zero
- 2) Factova ESG : Factova is LG CNS' strategic brand, a portmanteau of the words "factory" and "value." It aims to provide differentiated customer value by implementing data-based, real-time autonomous factories. Factova ESG is an ESG-focused solution built on the Factova Framework.
- 3) Transaction Processing System : A system that handles the daily operations and transactions of a company, mainly performing data entry, processing, and storage
- 4) Calculation methodologies : CML GWP100, EF 3.1 GWP100 (bio/fossil/land), etc.
- 5) Modeling : A process of structuring and organizing logic in stages to produce output through the system and mapping related information
- 6) LTP : Long Term Planning
- 7) LCA (Life Cycle Assessment) : A process of comprehensively evaluating the environmental impacts throughout a product's life cycle, including raw material procurement, manufacturing, transportation, use, and disposal
- 8) ISCC (International Sustainability & Carbon Certification) : International certification proving that products are made from sustainable raw materials

Product Carbon Footprint Calculation System

LG CNS successfully built the Product Carbon Footprint (PCF) module for LG Energy Solution's Battery Regulation Management (BRM) system based on our innovative technology and expertise in order to proactively address the EU's strengthened battery regulation management requirements. We have a roadmap for the gradual implementation of the BRM system as LG Energy Solution's battery regulation response platform, which includes not only the PCF module but also technical document management, DBP (Digital Battery Passport), and supply chain data linkage.

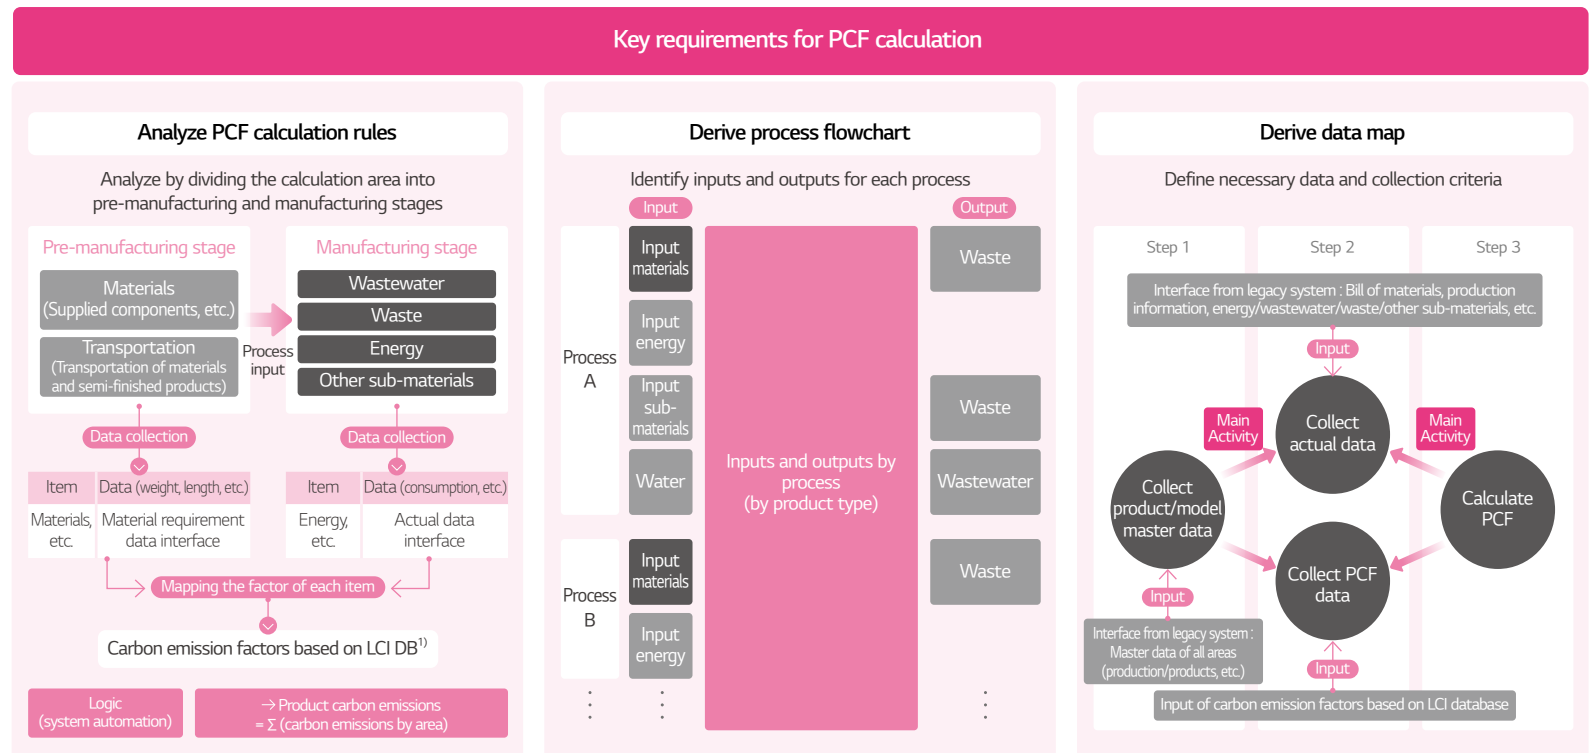

The key feature of the PCF module we have built is the "reliability" of the logic that automatically calculates the carbon emissions generated during the production, manufacturing, and distribution stages of a product. The

carbon footprint calculation system used by LG CNS is based on the EV battery PCF calculation rules established by the Joint Research Centre (JRC) of the European Commission. The system minimizes manual labor by utilizing performance data from the legacy system, enabling PCF personnel to make a carbon footprint calculation with a single click.

Through this successful collaboration with LG Energy Solution, LG CNS has set an example of positively impacting the environment and proactively responding to global ESG regulations by accurately measuring carbon emissions throughout the entire product life cycle (LCA, Life Cycle Assessment), from raw materials production to the product's use and disposal.

Benefits of Carbon Footprint Calculation System

- Measuring carbon emissions throughout the entire product life cycle
- Responding quickly to internal and external regulations
- Ensuring reliable data linkage

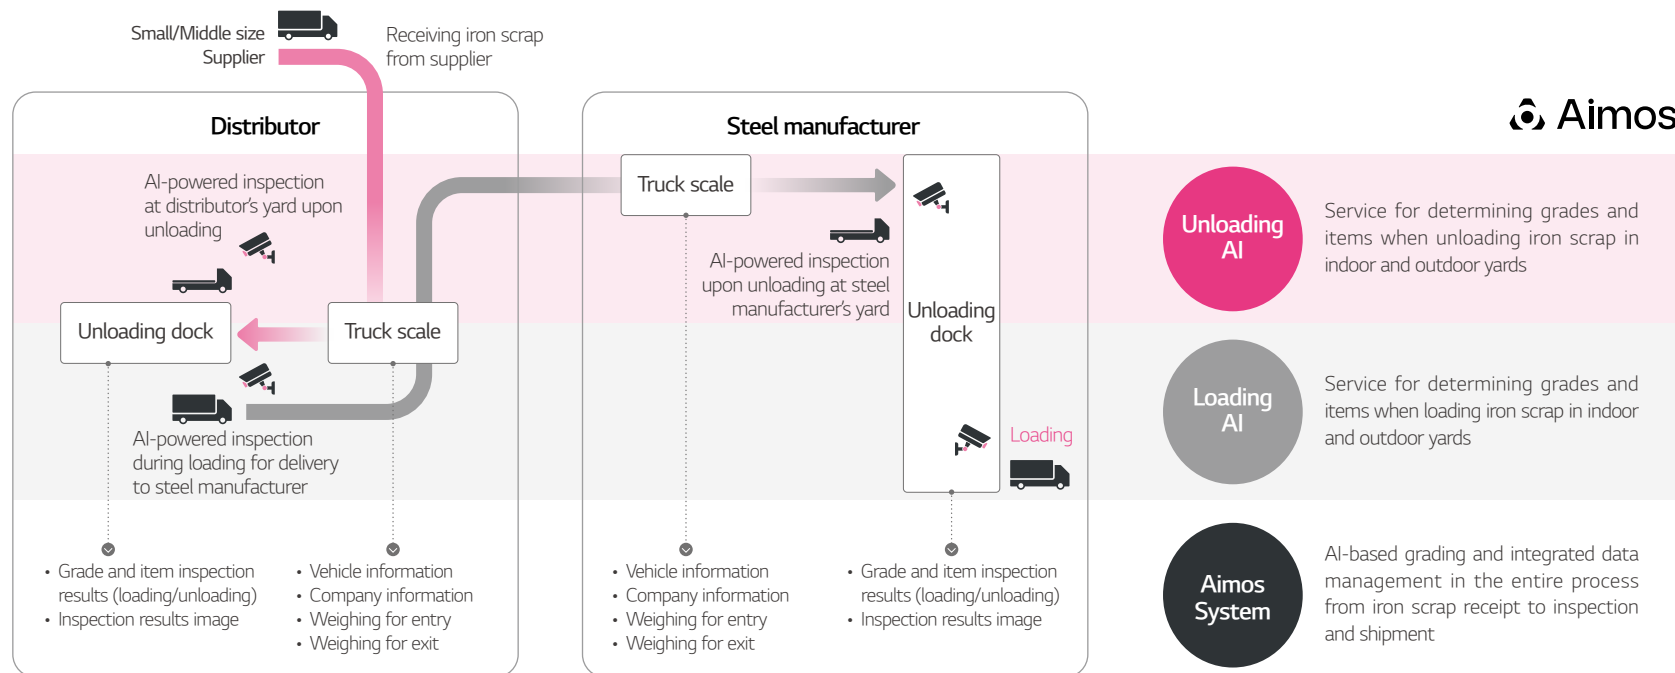

1) LCI DB : Life Cycle Inventory Database

Aimos, AI Iron Scrap Grading Platform

Vision AI-based SaaS¹⁾ Platform for Resource Circulation and Carbon Neutrality

As the importance of carbon neutrality gains global attention, the steel industry is shifting from using blast furnaces—which use iron ore as a raw material—to electric arc furnaces, a relatively low-carbon process. Consequently, iron scrap²⁾, the primary raw material for electric arc furnaces, is becoming increasingly important. With the introduction of the Circular Resource Designation and Notification System in January 2024, iron scrap is being recognized as a circular resource, highlighting its economic value as a recyclable resource and making it an important part of the circular economy.

In line with this development, LG CNS partnered with Daehan Steel to develop Vision AI technology that can grade scrap iron during intake operations, and is building a SaaS-based system with the goal of transforming the circular resource distribution system. This initiative resulted in the formation of a joint venture in March 2024, which has officially launched commercial operations.

1) SaaS (Software as a Service) : A method of software delivery in which software is accessed online on a subscription basis, so that the user can pay for only what they use through accessing the cloud, rather than buy software on their own devices

2) Iron scrap : Discarded iron and steel pieces

Aimos, AI Iron Scrap Grading Platform

Transforming Iron Scrap Inspection with Vision AI and SaaS Platform

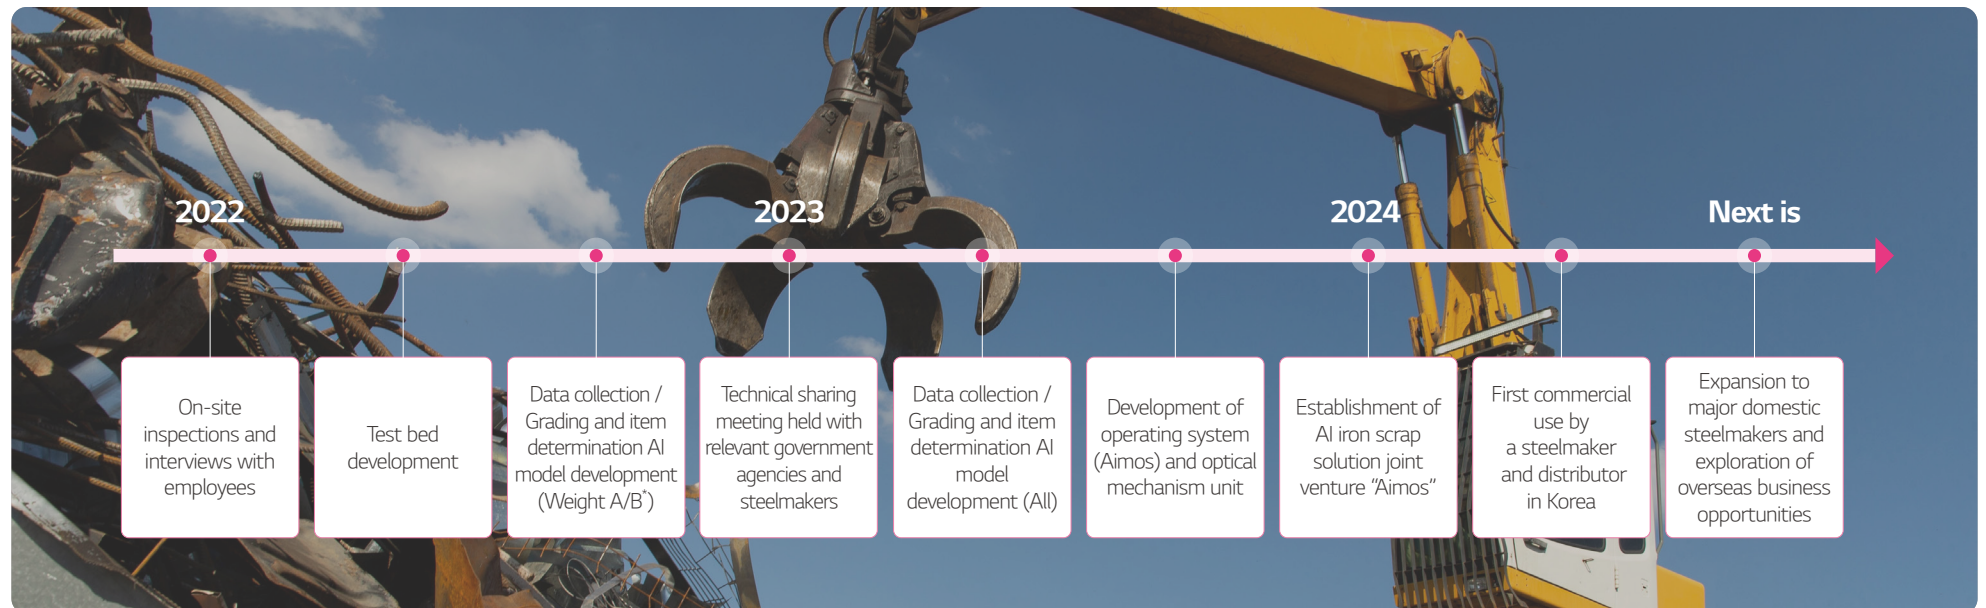

Automating the iron scrap grading process with Vision AI has streamlined the cumbersome work of manual observation and record-keeping, making it faster and more convenient. In particular, the hazardous materials detection AI model mitigates the potential dangers that can arise during manual inspection, thereby improving workplace safety. Moreover, AI automatically processes iron scrap recognition and grading and manages grading data. This supports data-based decision-making in production planning and purchasing strategies, and ensures objective reliability through consistent inspection results.

In addition, a cloud-based SaaS platform allows inspection data to be collected and integrated across various devices, including PCs, mobile devices, and tablets. This makes collaboration between multiple users easier and

integration with existing legacy systems more seamless. In addition, users can access the same level of inspection services worldwide via the cloud system.

Since implementing the platform, the accuracy of AI-based grading has exceeded 85-90%, and the visual and numerical data of grading results has fostered reliable business relationships between steelmakers. Furthermore, data-driven decision making has helped establish a reliable supply strategy, enabling planned production analysis through scrap quality management and improving product quality, which is expected to have positive impacts on the brand image over the long term.

Aimos Journey

* Iron scrap is graded according to KS (Korean Industrial Standards), with weight A referring to relatively thick and large iron scrap, and weight B referring to smaller or differently-shaped iron scrap.

Enerdict, Virtual Power Plant Solution

The meaning of the word “Enerdict” is to accurately predict energy flows, and it is the optimal solution for corporate clients engaged in VPP¹⁾ businesses.

For VPP operators, it is important to predict the power generation of small-scale renewable energy power plants, whose power generation varies depending on conditions such as the season and weather, and to carry out power dispatch instructions issued by the Korea Power Exchange. Power dispatch instructions are real-time orders issued to each power plant from the Korea Power Exchange, which manages the demand and supply of electricity in Korea, to adjust their power generation; VPP operators are required to follow these instructions.

LG CNS has integrated AI technologies, like machine learning and deep learning, and mathematical optimization techniques, into Enerdict. This allows for more accurate predictions of power generation and optimally responses to power dispatch instructions from the Korea Power Exchange, thereby maximizing operational profits for VPP operators.

In line with the global trend toward RE100²⁾, demand for renewable energy is rapidly increasing in domestic industrial complexes. In 2024, LG CNS signed a contract to supply Enerdict to national industrial complexes, and the project is underway as of June 2025. Enerdict sells electricity generated at solar power plants within industrial complexes to the power market or to other factories, generating additional revenue for industrial complexes and supporting the achievement of RE100.

Enerdict is currently engaged in the projects to integrate and manage renewable energy power plants in areas larger than industrial complexes, such as smart cities and distributed energy specialized areas, in the first half of 2025, and is leading the domestic VPP solution business. Also, to facilitate the effective operation of numerous small-scale renewable energy power plants worldwide, Enerdict is exploring overseas market expansion through collaborations with organizations such as the World Bank.

ESG Value Creation with Enerdict

Financial Value

- Promote the energy self-sufficiency of companies and contribute to reducing electricity purchase costs
- Contribute to the issuance of ESG bonds and the attraction of eco-friendly investments in line with global investment trends which emphasize eco-friendly management

Environmental Value

- Maximize renewable energy utilization by efficiently integrating and managing various renewable energy resources
- Contribute to the expansion of the renewable energy supply by facilitating the sale of renewable energy produced by companies to the electricity market
- Support companies in achieving RE100 and effectively reduce carbon emissions (Scope 2)

Social Value

- Contribute to power grid stabilization through AI-based accurate renewable energy generation predictions
- Develop an ESG-friendly power trading business model and ensure economic sustainability

Visual depiction of the services provided by Enerdict

1) VPP (Virtual Power Plant) : A concept of operating distributed small-scale renewable energy power plants, such as solar and wind power plants, as a single power plant using information and communication technology

2) RE100 (Renewable Electricity 100%) : A global campaign to meet 100% of a company's electricity consumption with renewable energy sources such as solar and wind power by 2050

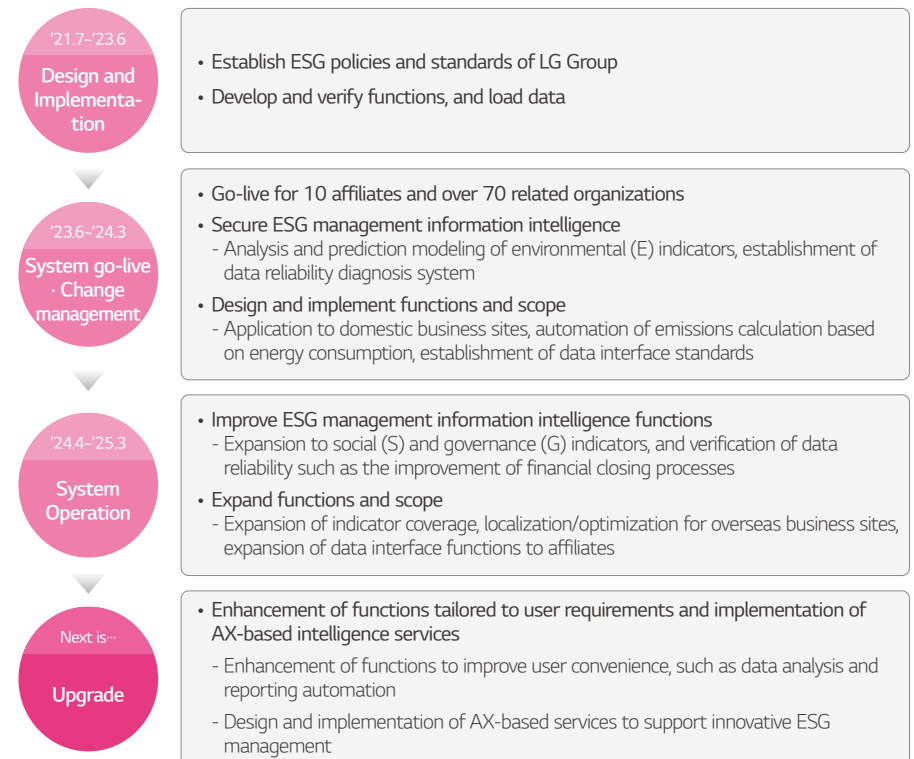

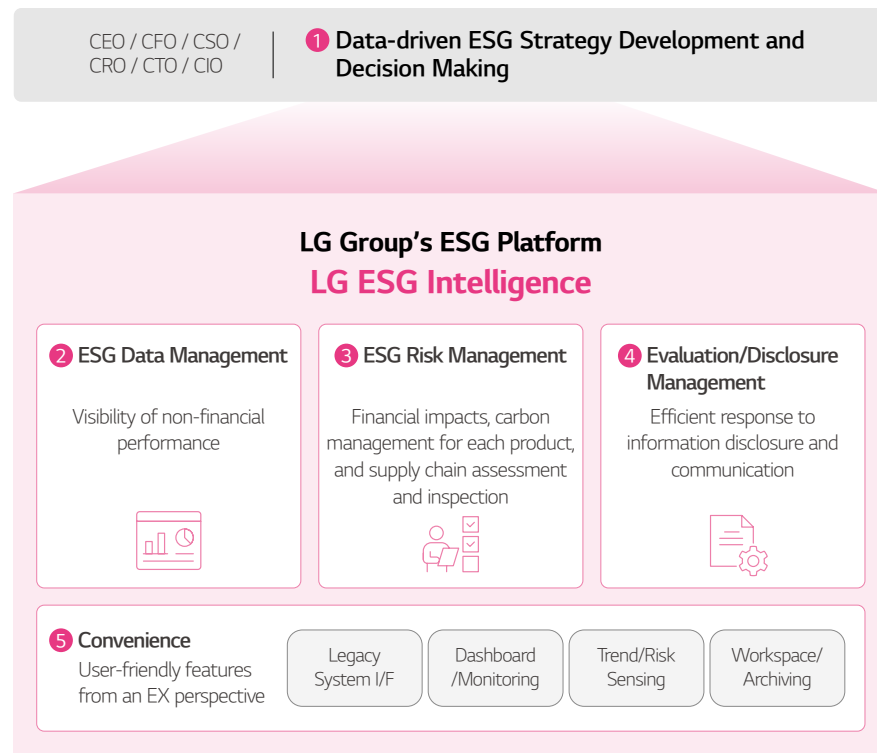

LG ESG Intelligence

The LG Group's ESG platform, LG ESG Intelligence, is an integrated management system for ESG management information that starts with managing core ESG indicators, entering, collecting, and managing ESG data, and utilizing and disclosing non-financial management information.

Since its official launch, the platform has been utilized by 10 major affiliates and over 70 related organizations. LG CNS is leveraging AX capabilities to enhance the platform's functionality, including data reliability verification and

GHG emissions calculation based on energy consumption. In line with the growing trend toward mandatory ESG information disclosure both domestically and internationally, we will continue to promote the realization of ESG management intelligence based on an ESG data warehouse. To this end, we will apply the platform to overseas business sites and expand the scope of data collection and utilization in order to effectively support each affiliate's responses to disclosure requests and the risk management of non-financial information.

Implementation Progress (~March 2025)

ESG FACT BOOK

ENVIRONMENTAL

Environmental Management

Policy

Environmental Management Policy

LG CNS recognizes that environmental issues are the matter of concern for key stakeholders, including our clients and investors, and an important factor in determining corporate value. In response to the climate crisis, we are implementing activities such as GHG emission management, replacement of data center equipment with high-efficiency models, establishment of an IT-based environmental management system, regular environmental training for employees, and resource recycling campaigns.

LG CNS has been implementing its Environmental Management Policy, which serves as the foundation for environmental management practices, and is making company-wide efforts to prevent environmental risks and fulfill the company's social responsibilities. The Policy applies to all stakeholders within the scope of the company's business activities.

Environmental Management Policy

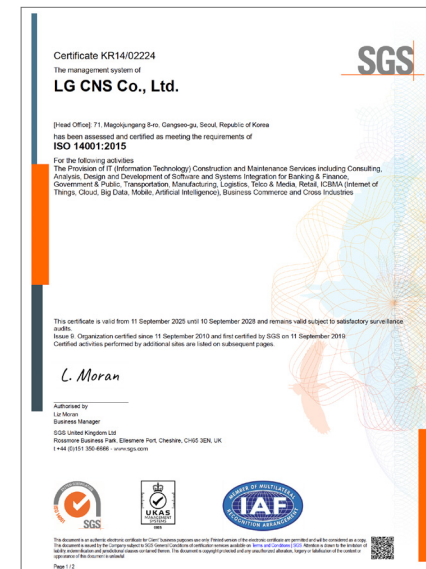

LG CNS fulfills its corporate social responsibility and aims to achieve sustainable management by pursuing the following environmental policy.

- Establish an environmental management system to minimize the environmental pollution generated during business activities, and promote continuous improvement activities
- Recognize global climate change as a shared challenge and strive to minimize the negative environmental impacts caused by greenhouse gas emissions
- Strictly adhere to domestic and international environmental laws and regulations, as well as the requirements of stakeholders, and faithfully fulfill our obligations
- Transparently disclose environmental management information and achievements, and proactively communicate with various internal and external stakeholders

Environmental Management System

LG CNS has established an environmental management system and manages key environmental indicators to ensure a sustainable future. Recognizing that GHG emissions could pose a significant climate risk, LG CNS has implemented a systematic management approach to energy consumption and GHG emissions across all our business sites. We have obtained and maintained certification for the global international standard ISO 14001 (Environmental Management System) and have newly acquired ISO 50001 (Energy Management System) certification in 2024, proof of our efforts to reduce energy consumption.

ISO 14001 (Environmental Management System) Certification

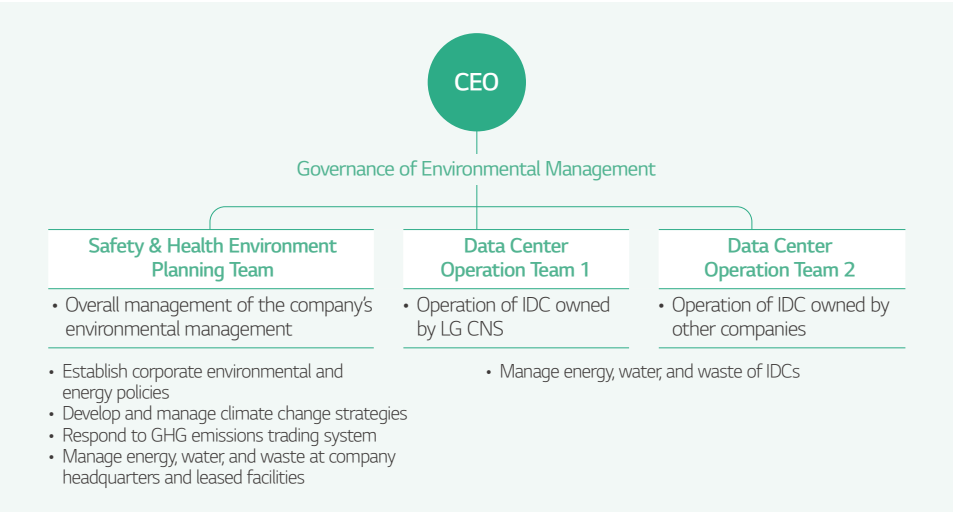

Environmental Management

Environmental Governance

LG CNS has an organizational structure in place to prevent environmental risks and implement environmental management across the entire company. The Safety & Health Environment Planning Team is responsible for overall environmental management company-wide, playing a central role in establishing LG CNS' environmental management system. The team's responsibilities include preventing environmental risks, developing environmental policies, responding to the requirements of the GHG emissions trading system, managing energy and GHG, and enhancing environmental awareness. In addition, Data Center Operation Team 1 and 2 are responsible for the operation and management of Data Centers (IDCs), which are the key business sites.

LG CNS regularly reports its major environmental performance, including energy consumption and GHG emissions, to key stakeholders, such as management and investors, through the Board of Directors, the Compliance Committee, and the EHS Committee. In addition, we are undergoing consulting on the "establishment of a GHG inventory for overseas business sites" to respond to global climate change and expand the scope of GHG management. We plan to ensure the reliability of our data through third-party assurance after calculating emissions.

1) Air cooling method : A method of cooling heat generated by equipment such as servers using cold air, similar to air conditioners used in homes

2) Immersion cooling method : A method of cooling equipment by completely immersing facility equipment in a non-conductive, dielectric liquid, whereby heat is directly transferred to the liquid with high thermal conductivity, resulting in high efficiency

3) UPS : Uninterruptible Power Supply

Goal

Environmental Management Goal and Tasks

The increasing demand for computing resources to support the training and execution of AI models, driven by advancements in AI technology, and the growing need to process and store large volumes of data, such as for cloud services, IoT devices, and streaming services, has led to a consistent rise in the power needs of data centers. LG CNS has established a data center energy efficiency task, and in 2024 successfully achieved its objective of reducing IT power consumption by 10% compared to 2021 and general office power consumption by 10% compared to 2022. In 2025, we are stably maintaining our energy savings performance by managing energy efficiently based on the ISO 50001 system. The current air cooling method¹⁾ has its limits when it comes to handling high-performance equipment, such as the computers used for AI, so we are establishing a mid- to long-term roadmap to manage heat with ultra-high efficiency by utilizing immersion cooling method²⁾ in stages.

LG CNS Data Center Energy Efficiency Task

Task	Activity	Implementation Period
Replacement with high-efficiency equipment	Replace mechanical equipment (Heat & humidity controller)	2022-2023
	Replace electrical equipment (battery, UPS ³⁾)	2024-2025
	LED lighting	2024-2025
Use of eco-friendly energy	Install additional solar power generation equipment	2024
Energy saving campaign	Reduce energy usage for E/V and lighting, control air conditioning temperature, etc.	2023-2025

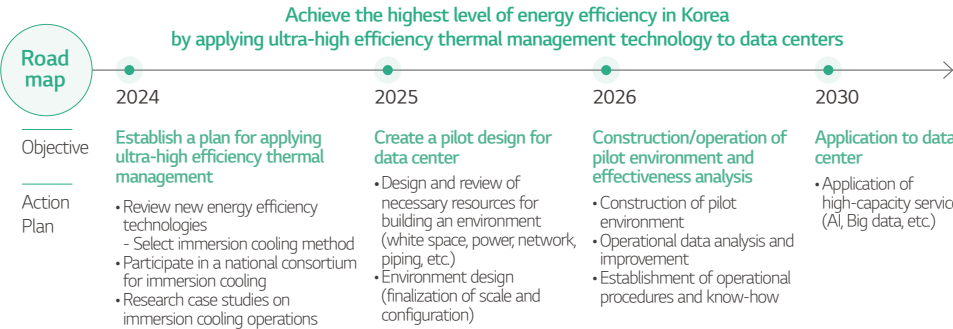

Replacement with high-efficiency electrical equipment at data centers

Replacement with eco-friendly energy and energy-saving campaign

Ultra-High Efficiency Thermal Management for Data Centers

Environmental Management

Activity & Performance

Operation of Eco-friendly IT System for Data Centers

LG CNS continuously monitors its server room temperatures through an integrated management system (DCIM¹⁾) which manages the infrastructure (electricity, temperature, humidity, lighting, security facilities, etc.) of the data centers in Busan, Sangam, and Gasan. In the event of imbalances between zones, the system controls the cooling system and optimizes air flow to efficiently manage energy usage in the server rooms. In addition, we are committed to reducing our GHG emissions by installing energy-efficient equipment and LED lighting, as well as solar power generation facilities.

Energy Saved at Data Centers²⁾

Data Center	Unit	2022	2023	2024
Sangam	TJ	20.2	29.9	33.0
Busan	TJ	1.6	11.5	17.0
Gasan	TJ	-	53.1	61.8
Total	TJ	21.8	94.5	111.8

Carbon Emissions Reduced at Data Centers

Data Center	Unit	2022	2023	2024
Sangam	tCO ₂ eq	966	1,430	1,577
Busan	tCO ₂ eq	77	550	811
Gasan	tCO ₂ eq	-*	2,540	2,959
Total	tCO ₂ eq	1,043	4,520	5,347

* Some past data is missing, as replacements were performed sequentially based on the equipment's expiration date

2024 Installed Solar Power Generation

Data Center	Unit	2024	2025 (Projected)
Sangam (Sept 2024~)	TJ	0.19	0.56
Busan (Oct 2024~)	TJ	0.16	0.65

Management of Data Center Water Usage

LG CNS compares the year-over-year water usage on a monthly basis and identifies the reasons for increases or decreases to establish management plans. In addition, we regularly clean water tanks and conduct regular water quality inspections. Despite rising average temperatures in summer, we have maintained the same level of water usage each year through energy conservation activities.

Data Center Water Usage

Data Center	Unit	2022	2023	2024
Sangam	ton	14,774	17,914	16,609
Busan	ton	85,669	92,773	81,392
Gasan	ton	69,766	81,298	71,466
Total	ton	170,209	191,985	169,467

Improvement of Data Center PUE³⁾

LG CNS is continuously improving its PUE by applying a “built-up outdoor air cooling system,” an eco-friendly system that uses natural outdoor air to cool the heat generated in the data center server room, an “intensive server cooling system” which cools only the necessary areas rather than cooling the entire data center server room, and “solar power facilities.”

Average PUE Status and Target

Year	2021	2022	2023	2024	2025 (Target)
Average PUE	1.61	1.59	1.55	1.49	1.46

1) DCIM : Data Center Infra Management System
2) Estimated energy saved by applying high-efficiency equipment
3) PUE (Power Usage Effectiveness) : The most widely used indicator in Korea and abroad to measure the power usage efficiency of a data center, which is the total amount of power used by the data center divided by the amount of power used by the data center IT equipment

Environmental Management

ISO 50001 (Energy Management System) Certification

ISO 50001 is an international standard for energy management systems established by the International Organization for Standardization (ISO), which provides a framework for organizations to establish and implement energy policies, set goals, and continuously improve performance.

In September 2024, four LG CNS Data Centers (Sangam, Busan, Gasan, and Hanam) obtained ISO 50001 energy management system certification from DNV, a global certification provider.

As data centers consume large amounts of energy, LG CNS has been engaged in continuous energy-saving activities, such as adopting outdoor air cooling and centralized air conditioning systems, replacing equipment with high-efficiency models, and installing solar power facilities. With the adoption of ISO 50001, we are managing energy in a more systematic way based on the PDCA (Plan-Do-Check-Act) cycle.

ISO 50001 (Energy Management System) Certificate

Environmental Management

Environmental Management Education

LG CNS conducted an online education program on the environment for all employees to raise their awareness of environmental management. We produced customized videos tailored to the industrial characteristics of our company so that employees participating in the program could better understand the necessity of responding to climate change, and presented LG CNS' environmental management goals and vision effectively.

2024 ESG Environmental Education Notice

Environmental Education Status (for All Employees)

Category	Unit	2022	2023	2024
Number of employees subject to education	Person	6,543	6,914	6,708
Number of employees participated in education	Person	6,051	5,965	4,331
Participation rate	%	92	86	65
Education hours per person	Minute	15	5	9
Total education hours	Minute	90,765	29,825	38,979

Resource Recycling Campaign

LG CNS is participating in the "Bi:CYCLE" campaign, a project that recycles used hand towels, to promote a circular economy and reduce carbon emissions. For this campaign, which is a collaborative effort with Yuhan-Kimberly to promote resource recycling that began in 2024, we have set up a system to collect and reuse hand towels at our Magok headquarters. More than 20,000 employees from nine affiliated companies in the Magok LG Science Park, including LG CNS, are participating in the campaign. We expect the active engagement of our employees to promote ESG management practices and raise awareness of the importance of addressing climate change.

Bi:CYCLE Campaign Poster

Campaign Results

Category	Unit	2024
Amount collected	kg	5,905
Actual amount recycled	kg	3,670
GHG reduced ¹⁾	kgCO ₂ eq	3,682
Tree planting effect ²⁾	Trees	405

1) Used carbon emission factors of Ecoinvent v3.8 & v3.91 and electricity emission factors of the National GHG Emissions Trading System

2) Used a paper published by the Korea Forest Service in 2019 (carbon absorption of 30-year-old pine trees in the central region : 9.1 kg CO₂eq/tree * year) as a reference

Policy

Recruitment Policy

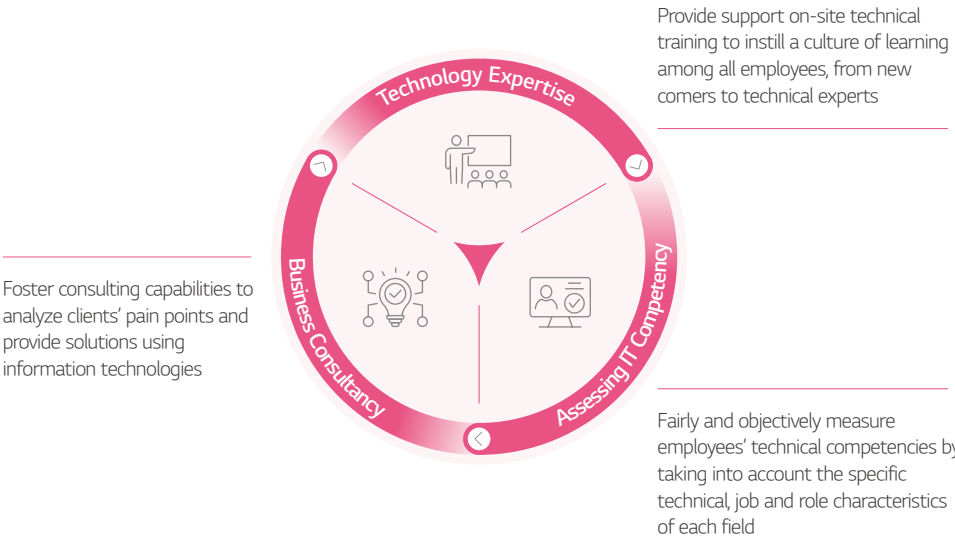

LG CNS secures the best talent to provide higher value to our clients and solidify our foundation for growth. We recruit DX (Digital Transformation) experts based on a concept of talent that includes the competencies, mindsets, and behaviors that LG CNS employees should possess, such as expertise (Insightful Expert), innovation (Game Changer), autonomy and responsibility (Empowered Achiever), growth (Self-motivated Learner), collaboration (Synergy Builder), and respect (Open-minded Listener). Furthermore, we aim to strengthen our position both domestically and internationally as a leading AI service provider by recruiting and training AX (AI Transformation) experts with enhanced AI capabilities.

Talent Recruitment Management Organization

Talent Development Policy

At LG CNS, we foster the technical and business consultancy expertise of our employees so that they can be recognized as top experts in their fields and take pride in their work. LG CNS cultivates top-notch talent to lead AX beyond DX. To foster an internal culture centered on technical competence, we enhance our employees' skills by providing personalized learning experiences, shifting away from one size-fits-all training, and striving to instill a culture of learning in individuals and organizational units. In addition, we conduct a "TCT (Technology Certification Test)" for all employees to fairly and objectively measure the technical competency of our employees, and provide direction and motivation for individual competency development.

Talent Development Management Organization

Human Capital Management

Goal

Strategy and Goals of Talent Development

LG CNS aims to strengthen the technical capabilities of its employees by offering personalized training tailored to their jobs and roles. We have established a training system for emerging information technologies such as AI, data, cloud, agile, and AM¹⁾ to build expertise in DX technologies, and offer a range of training courses to cultivate experts. In addition, we hold the Insight+ Tech Seminar to help our employees learn quickly about new technology trends and respond to rapidly evolving technologies.

In 2025, we will foster AX expert candidates to secure AX leadership and equip them with advanced capabilities to leverage GDC (Global Delivery Center)²⁾ and AIDD (AI Driven Development)³⁾ to enhance productivity. We will also operate a PM School to strengthen the core project implementing capabilities of PM candidates. Furthermore, we will enhance leaders' execution capabilities by sharing the company's strategic direction, holding quarterly leadership forums, and offering customized programs based on leadership models. Additionally, we plan to establish a leadership development system and expand leadership surveys to identify and nurture prospective leaders, thereby building our next-generation leadership pipeline.

We will implement the Technical Competency Committee Evaluation⁴⁾ to assess employees' technical competencies in the manner most appropriate for their job characteristics, and diversify the certification methods to improve evaluation accuracy. Moreover, we plan to strengthen the technical competencies of employees at the newly established Vietnam Build Center⁵⁾ (2023) and Indonesia Build Center (2024), with the goal of developing them as overseas business partners that can grow alongside the headquarters.

1) AM (Application Modernization) : A technology of breaking down complex programs into smaller units, and integrating and reconfiguring them to increase business agility

2) GDC (Global Delivery Center) : A global collaborations framework with overseas developers specialized in specific business areas, overcoming the limitations of time and space

3) AIDD (AI Driven Development) : A development approach that applies AI technology across the entire process of analysis, design, development, and testing, to optimize implementation processes and completely transform project implementation by leveraging various AI assistants

4) Committee Evaluation : A method of assessing real-world performance and job-related competencies beyond basic knowledge through a committee of technical experts

5) Build Center : A specialized implementation organization established by LG CNS to support project delivery

Activity & Performance

LG CNS Concept of Talent

For LG CNS, talent comprises the core competencies and ways of thinking and attitudes that employees must possess in order to achieve the company's mission, vision and strategy. To define talent, LG CNS gathered ideas from leaders and employees through various channels, and developed six values unique to LG CNS. Based on these six values, we have defined recruitment criteria for each organization and incorporated them into the interview process to select outstanding talent.

Recruitment of Outstanding AX Specialists

LG CNS operates an optimized recruitment process to secure the best elite experts who will lead AX beyond DX. We are recruiting talent in fields that include AI, big data, cloud, architecture, smart logistics, smart factory, and ERP to evaluate applicants' IT capabilities in a multifaceted manner. Successful candidates are provided with IT career training and job-specific training opportunities.

LG CNS operates an internship program twice a year, in summer and winter. The program is designed to select talented individuals with potential, and applicants are recruited separately for bachelor's and master's/doctoral degrees. Applicants with master's or doctoral degrees are able to choose the timing of their internship. During the internship, participants work with mentors to complete assigned tasks, presenting their final project during the last week of the program. Successful interns may join the company as entry-level employees upon graduation.

Human Capital Management

Industry-Academia Cooperation Program

LG CNS operates partnership programs with Korea's leading universities, including Seoul National University, Yonsei University, Korea University, and Chungang University. We offer recruitment-linked internships in summer and winter to nurture and secure talented IT professionals, and specialized courses for specific areas such as AI, big data, consulting and security. In addition to educational courses, we also conduct collaborative activities with universities in fields such as technology development, software competitions, and textbook publication, and are expanding internships for local universities to secure local talent. LG CNS is considering launching additional industry-academia cooperation programs, and plans to continue securing AX-specialized talent by selecting more than 30 graduate students each year. The selected students are provided with full tuition coverage and modest amount of financial support for living. They are also guaranteed employment at LG CNS upon completing their master's degree.

Industry-academia cooperation agreement signing ceremony with Yonsei University Graduate School

Year	University	Description
2025	KAIST	Established a new master's program in industrial engineering, "AX Talent Development Track"
2024	Seoul National University	Established a new master's program in industrial engineering, "Talent Development Track"
	Yonsei University	Established a new department, "Intelligent Data and Optimization"
2023	Korea University	Established a new department, "Department of AI Data Science"

AX Expert Development

LG CNS is committed to developing experts who can lead AX business and implementation by helping employees build the necessary capabilities to apply AX effectively. To this end, we have defined the profiles of AX experts for each business domain and identified their roles, tasks, and required competencies. Based on this framework, we have established a training system that provides mandatory and elective training. In addition, we have implemented internal certification standards that include mandatory training courses tailored to AX experts and project-based experience.

Support for Acquiring Technical Certification

LG CNS supports its employees in developing their technical skills and obtaining industry-recognized certifications from leading global IT companies. LG CNS has over 3,900 certifications held by employees from three global CSPs (Cloud Service Providers), including Google Cloud, AWS, and Microsoft. We offer our employees various benefits, including reimbursement for certification exam fees and bonuses for passing the exams.

My Career Up, a Career Self-Development Program

LG CNS helps its employees to experience various jobs and develop their careers independently through "My Career Up" program, a self-planning career development program in which employees can find and apply for the job and the team they want. Applicants check job openings on the internal My Career Up bulletin board and apply to the desired department. After receiving final acceptance, they are transferred to the department within two months. This creates a virtuous cycle in which employees are encouraged to develop their competence and careers, while the organization evolves into one that its employees wish to work for. Since 2021, approximately 850 employees have passed the selection process and moved to their desired teams. LG CNS continuously supports employees to develop their careers even after joining the company.

Career Design : A Time to Reflect on Your Career

LG CNS offers a Career Design program to help employees continuously reflect on and develop their careers. To assist employees in designing their careers at a technology-driven company, we offer career development coaching sessions led by internal experts. We also provide special lectures on financial planning to address personal life concerns. Through these initiatives, we aim to provide an experience in which careers are developed not only in the workplace but also in the broader context of an individual's life. Since 2016, over 2,000 employees have completed the Career Design program.

Overseas Employee Technical Training

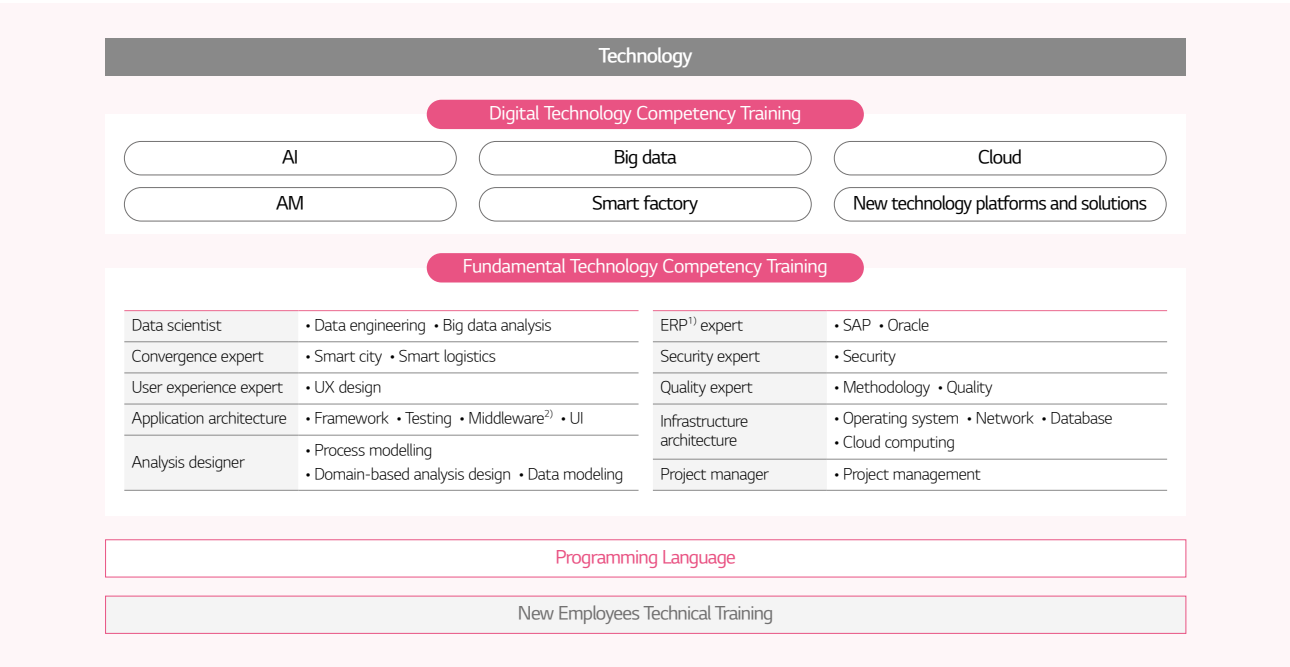

LG CNS provides technical training to overseas developers belonging to the Global Delivery Center (GDC), a global collaboration framework involving overseas affiliates. To strengthen the technical capabilities of employees of the Vietnam Build Center, established in 2023, we have established a training system segmented by job type, such as software development, solution development, cloud, architecture, and enterprise solutions, and provide customized training according to each employee's duties and roles. We have developed a training curriculum with our in-house technical experts, and overseas employees are working with employees at headquarters to enhance their capabilities. Going forward, we plan to train local employees to become in-house training experts, enabling the Build Center to deliver training independently.

Human Capital Management

DX Expert Training System

LG CNS is working to become an organization composed of technical experts and has been continuously expanding its DX technology training activities. Based on the DX technology classification system, we provide training according to each employee's skills and level. Top technical experts both within and outside the company share their practical knowledge of LG CNS' core competencies with the employees. Since 2023, we have introduced and utilized an online training platform to enable all employees to access diverse training content. We also provide on-site training at project locations for employees who find it difficult to attend training at headquarters, enabling them to learn on-site.

In addition, we have offered online and in-person training to enhance the capabilities of subsidiaries, suppliers, and GDC employees within LG CNS' collaborative ecosystem. Furthermore, we have implemented collaborative training programs between the headquarters and the GDC to promote practical collaboration and reduce the time required for the kickoff of GDC projects.

1) ERP (Enterprise Resource Planning) : An integrated information system that strengthens corporate competitiveness in the sense of enterprise-wide resource management
2) Middleware : A software that enables smooth communication when different types of hardware or communication environments are connected

Technology Competency Evaluation System

LG CNS is committed to supporting the efforts of its employees in becoming technical experts in their respective fields. Since 2016, we have been conducting our proprietary TCT (Technology Certification Test) to foster and assess the technical competencies of our employees. The evaluation system is updated annually to reflect changes in technology, business models, and overall strategic direction. In 2024, we enhanced the evaluation process by introducing the "Technical Competency Committee" system, where experts evaluate their peers. This system complements the TCT by enabling a more multifaceted and field-based assessment of individual technical competencies.

Additionally, for technical positions, we conduct separate in-depth evaluations of high-performing employees with advanced technical capabilities. Through this evaluation, we select potential experts, experts, masters, and principals at each stage and provide them with differentiated opportunities and rewards.

LG CNS Technology Expert Roadmap

Human Capital Management

Organization-Customized Team Building Program

LG CNS implements customized team-building programs tailored to various situations for each team and project. Based on a clear preliminary assessment of each organization, we define specific team growth goals, design customized solutions, and implement team-building programs. These programs help leaders establish a direction for growth and empower them to guide their teams forward. At the same time, team members develop a greater sense of shared purpose and increased work engagement, resulting in positive outcomes. In 2024, a total of 4 teams and 91 employees participated in the team-building program.

Strengthening Leadership and Global Competency

LG CNS provides various competency enhancement programs to help employees continuously develop their leadership and global competencies. We conduct regular leadership surveys based on LG CNS' unique leadership model and use the results to develop customized leadership development plans for organizations and individuals, as well as to support the effective exercise of leadership in the workplace. Notably, we host the company-wide "Leadership Forum," where CEOs, executives, and team leaders gather to share insights on company changes and strategic directions; the "Coaching Leadership Program," which provides various programs such as one-on-one coaching, team coaching, and coaching development certification; and the "Leader Care Program" to enhance leaders' resilience. We have also established a new system for cultivating leadership candidates to strengthen our leadership pipeline.

LG CNS operates in overseas markets that include the United States, Vietnam, and Indonesia. Accordingly, we are strengthening our global capabilities so that our employees can understand the different cultures and communication styles of each country and meet the needs of overseas clients. Launched in 2016, G-CAMP (Global-CAMP) is a specialized language program developed by in-house experts who have experience in overseas business, and utilizes LG CNS' own global business cases. In 2024, we established the Vietnam GDC course to facilitate smooth communication with Vietnam Build Center employees, and developed customized teaching materials that reflect the GDC utilization process specifically for this course. Starting in 2025, we launched the "[English] Business Communication Coaching" program, a one-on-one native speaker coaching program, to actively support our employees engaged in global business. By providing our employees one-on-one coaching with customized content whenever they need it, LG CNS helps all employees acquire communication skills that can be immediately applied in real situations, such as building relationships with global clients and giving business proposal presentations.

Human Rights Management

Policy

LG CNS Human Rights Policy

Respect for Human Dignity Respect all workers as human beings and ensure that there is no sexual harassment, sexual abuse, corporal punishment, mental or physical coercion, verbal abuse, or unreasonable restrictions in the workplace, thereby preventing harsh or inhumane treatment.

Non-Discrimination Ensure that there is no discrimination based on nationality, race, age, gender, sexual orientation, disability, pregnancy, religion, political affiliation, union membership, or marital status in the operation of personnel systems such as hiring, promotion, compensation, and training, as well as in the provision of products and services.

Prohibition of Forced Labor Do not force labor that goes against an individual's free will by unjustly restricting mental or physical freedom through violence, threats, or confinement. All labor must be voluntary, and employees should not be required to surrender government-issued identification, passports, or work permits as a condition of employment.

Prohibition of Child Labor No child laborers are employed in any position. A "child" refers to a person below a certain minimum age, which is determined by the laws and regulations of each country and region. When employing young workers above the legal minimum employment age, legal working hours are observed, and they are not assigned to jobs that are harmful or dangerous to health, safety, morals, or well-being.

Working Hours Comply with the regulations regarding regular working hours, overtime, and holidays as specified by the laws and regulations of each country and region.

Wage and Welfare Compensation provided to all workers complies with the labor laws and regulations of each country and region, including minimum wage, overtime, and statutory benefits.

Freedom of Association Recognize the freedom of association and rights guaranteed by the labor laws and regulations of each country and region, and create an environment where workers can communicate with management about working conditions without fear of discrimination, retaliation, intimidation, or harassment.

Protection of Personal Information Stakeholders' personal information is strictly protected, and it is not disclosed or used for other purposes without prior consent from the stakeholders. Additionally, truthful information is conveyed without providing false facts or information, and promises are always kept.

Safety and Health Create a safe and hygienic working environment for all employees, including staff of partner companies. Establish a safety and health management system to prevent accidents and comply with safety and health-related laws.

System for Diversity & Inclusion

LG CNS respects the diversity of its employees in all forms, including age, gender, nationality, race, religion, and physical or mental disabilities. We also respect the unique characteristics and values of each individual, such as marital or pregnancy status and social class, and ensure that we do not discriminate. As part of our policy to actively support maternity protection, we actively ensure the use of various legal systems such as pre and post-natal leave, spousal paternity leave, and parental leave, and work actively to hire people with disabilities through Haengbokmaru. To embrace generational diversity, we operate an individualized "People Care" program based on the life cycle stage of each individual employee and provide unique and differentiated positive experiences for all our team members.

In terms of work environment, we conduct client abuse prevention activities and work environment improvement activities to ensure that our employees can work in a stable and comfortable environment. We are changing the ways in which we work to allow more flexible and autonomous arrangements by implementing a self-responsibility work system that allows employees to work from home on a permanent or flexible basis to achieve a better work-life balance, and are gradually expanding our smart offices.

LG CNS enables its employees to contribute to society both internally and externally, fostering a sense of belonging and pride in the company. As an AX specialist, we provide various People Care programs, including "Digital Coding Camp," which contributes to local communities by leveraging our IT expertise.

Key Directions of People Care in 2025

- 1 Diversify site care programs for project site employees
- 2 Facilitate diverse communication to encourage voluntary participation in organizational culture by employees
- 3 Foster a ONE CNS organizational culture that transcends the distinctions between suppliers, subsidiaries, and global operations
- 4 Promote work-life balance for employees through People Care activities that embrace family diversity
- 5 Operate a diversity program and address employee concerns

Human Rights Management

Goal

Key Goals

LG CNS aims to actively accept the opinions of its employees and transform those opinions into positive results. To this end, we have expanded the People Care program under the keyword "Project site-oriented LG CNS." We conduct regular site visit programs for employees working at project sites to demonstrate that we are as committed to taking care of them as we are our employees at headquarters. We also strive to improve the working environment by conducting regular on-site inspections to ensure that employees working at project sites have a safe and comfortable workspace.

In 2025, we aim to further diversify our support by adding the keywords "ONE CNS" and "Family-friendly" to "Project site care." We will establish a People Care program that allows all employees to participate, regardless of their role, and operate family programs that reflect diverse family types to expand the meaning of the workplace and create a more dynamic work environment for employees. In addition, we will continue to diversify our programs centered on project sites and proactively provide the necessary support to each site, regardless of its location, to enhance the satisfaction of employees across all business sites.

Activity & Performance

People Care Program

LG CNS provides positive experiences to its employees through project site-oriented People Care programs that respect workplace diversity and meet the needs of site members. We have developed outreach programs that are not restricted based on region, and promote communication and unity among all employees through programs organized by project and business division.

The People Care program operates a total of 40 programs under four themes : Project Site Care, Family Care, Team Building, and Refresh. All programs contribute to high satisfaction by promoting positive employee experiences and organizational and work engagement, resulting in improvements in work efficiency. In addition, we collect feedback from program participants to upgrade the program every year and enhance the program quality. We also reflect the requests of employees submitted via email and the Labor-Management Council to provide programs that will fulfill practical needs.

Human Rights Management

Sexual Harassment and Workplace Bullying Prevention Training

LG CNS conducts sexual harassment and workplace bullying prevention campaigns and training to understand the diversity of its employees and create a healthy organizational culture for all. To prevent sexual harassment and workplace bullying, we raise awareness to ensure our employees understand the concepts of sexual harassment and workplace bullying through in-house bulletin board notices and education. In addition, we provide a reporting system that enables employees to report and resolve incidents if they occur.

Support for Employees with Disabilities

In 2016, LG CNS established Haengbokmaru Co., Ltd, a subsidiary of LG CNS. Haengbokmaru is a standard workplace designed to facilitate the employment of people with disabilities and enhance employee welfare. Haengbokmaru operates a range of services, including our in-house cafes, cleaning services for employee office areas, and massage services by the visually impaired at the Magok LG Science Park headquarters, Sangam DDMC, and Sangam IT Center. Out of a total of 108 employees, 96 are disabled workers, and 94 have severe disabilities. Nine managers (including four with disabilities) guide employees in their work and support their career development, while professional counselors provide emotional and psychological counseling. In addition, we provide convenience facilities, exclusive lounges, and group insurance for employees with disabilities. We also have entered into a business agreement with the Korea Disabilities Art Association to increase cultural and artistic opportunities for people with disabilities, hosting four annual exhibitions of works by disabled artists, and participate in social contribution activities in collaboration with the Korea Employment Agency for Persons with Disabilities. In recognition of our active efforts to promote employment and improve working conditions, we received commendations from the Minister of Employment and Labor at the Competition to Promote Employment for People with Disabilities (2018, 2022) and were selected once again as an outstanding employer for people with disabilities in 2024, following our selection in 2021. Moreover, we were selected as an outstanding workplace with no discrimination by the Ministry of Employment and Labor and the Korea Labor and Employment Service (2024) and received an award from the Minister of Employment and Labor.

Haengbokmaru

Received commendation from the Minister of Employment and Labor at the Competition to Promote Employment for People with Disabilities (2018, 2022)

Selected as an outstanding employer for employees with disabilities (2021, 2024)

Selected as an outstanding workplace with no discrimination (2024)

Female Leaders Forum

LG CNS hosts Female Leaders Forums to encourage the career development and networking of female leaders and strengthen their leadership capabilities. In 2024, the forum featured special lectures by female CEOs from outside the company, group discussions, and CEO roundtable discussions, providing opportunities for female leaders to grow professionally and communicate with their seniors and juniors. In 2025, the forum will focus on career development and leadership for female leaders. Through this, we plan to focus on strengthening leadership to achieve results while building a network among female leaders.

Female Leaders Forum

Preventing Client Abuse and Handling Grievances

LG CNS strives to protect its employees from client abuse by visiting workplaces and listening to employees' concerns. In addition, we conduct employee surveys and produce videos promoting the elimination of abuse, and distribute them to clients to help employees focus on their work without stress.

LG CNS is committed to addressing employee grievances reasonably to ensure human rights protection, enhance workplace satisfaction, and foster a healthy work environment. We operate a grievance handling program on an ongoing basis, and employees can report any concerns through the internal grievance handling board at any time.

Human Rights Management

Labor-Management Council

LG CNS operates the “Labor-Management Council” as a representative body that delivers the voices of employees to management and discusses important issues. The Labor-Management Council, consisting of six employee representatives and six management representatives, holds regular meetings once per quarter and ad hoc meetings when necessary to discuss major issues. The representatives of employees include one female representative, and are composed in proportion to the number of employees in each business division. The council addresses various issues, such as employee grievances, working conditions, and management strategy, and carries out activities for employees, such as salary adjustments, funeral association operation, and pregnancy care programs. In 2024, the Labor-Management Council was held five times.

Customized Support for Project Sites

LG CNS holds CEO site visits called “Chunmun Hyeondab (Q&As)” to listen to the opinions of employees at project sites. More than once a month, the CEO, CHO, and CFO visit project sites to answer questions from employees. In addition, we hold HR meetings called “InterFACE” to lower the communication barrier with the HR department and “WITH PM” to communicate with PMs on project sites, striving to actively listen to the opinions of our employees. We foster a positive organizational culture at project sites through programs such as “Chunchelin,” which delivers gourmet boxed lunches to project members working in remote areas, and “Jeungmi PLUS and Ochang PLUS” committees which are composed of project site employees. In addition, we hold “Round Table Meetings” at least twice a month, in which the CHO directly visits project sites to discuss better ways forward in an open setting.

Educational Expense Support for Employees with Children

LG CNS provides scholarships to support employees with children with their educational expenses. We provide financial assistance for admission fees, tuition, and school operating expenses, offering up to KRW 2 million per year for middle school students, KRW 4 million per year for high school students, and KRW 10 million per year for university students. Assistance is guaranteed regardless of length of service or employment status, reflecting our company’s policy to reduce the financial burden of educational expenses for all employees without discrimination.

Support for Special Education Expenses for Employees’ Children with Disabilities

LG CNS provides financial support for special education expenses of children with disabilities to help employees with disabled children. For employees with children age six or older, we cover actual expenses such as admission fees, tuition, and school operating costs, regardless of whether the education is public or private, up to a monthly limit of KRW 1 million. This stems from our policy of understanding and embracing not only employees with disabilities, but also employees who have children with disabilities.

Parental Leave

At LG CNS, employees can take a maximum of two years of parental leave, including the statutory parental leave, enabling employees who are new parents to spend more time with their children. This stems from LG CNS’ policy to respect and embrace our employees with children, and employees can feel free to take parental leave in an organizational culture that actively supports it.

Maternity Care and Female Employees Support Programs

To protect and respect pregnant and parenting employees, LG CNS ensures that they have access to various programs such as pre- and postnatal leave, spousal paternity leave, reduced working hours during pregnancy and childcare, and time off for prenatal care. In addition, we understand the difficulties caused by physical differences between men and women, and to accommodate these differences, we guarantee menstrual leave for female employees.

Human Rights Management

Employee Welfare Program

LG CNS supports a wide range of welfare programs to enhance the quality of life and well-being of our employees.

Program	Description	
Life Cycle Benefits	<ul style="list-style-type: none"> KRW 2.5 million and congratulatory wreaths for first marriage after joining the company (for employees who have worked at least a year) Interest support for student loans for new employees, gifts for promotion to specialist "Digital Coding Camp" for employees in their second year of employment 	<ul style="list-style-type: none"> Support for travel vouchers for retirees In the event of an employee's death, an in-house bereavement committee provides support for the bereaved family, as well as support for funeral expenses and provision of funeral goods
Family-Friendly Programs	<ul style="list-style-type: none"> In-house daycare centers provided at Magok Headquarters and Sangam DDMC and Twin Towers in Yeouido Provide psychological tests for children, birth gift, gifts for elementary school entrance, and college entrance exam, etc. 	<ul style="list-style-type: none"> Provide welfare cash benefits such as holiday welfare points and support for 60th and 70th birthday celebrations Operate "Family Day" program : Magic show, Happy Parents Day, Magok Spring Camp, Our Film, Spring picnic and vegetable garden experience, Art drawing festival, etc.
Output-Based Work System	<ul style="list-style-type: none"> Work hours and location can be flexible based on individual schedules and life patterns Operating more smart offices and base offices 	
Overtime Restrictions	<ul style="list-style-type: none"> Turn off the cloud for those working more than 52 hours per week to ensure employees are well-rested and to comply with legal requirements (No access to work environment when cloud is off) 	
Support for Long Term Service Rewards and Vacation Usage	<ul style="list-style-type: none"> Offer "Refresh Vacations" with paid time off for a minimum of three weeks and a maximum of one month : either a reward or a sabbatical guaranteed every five years Offer a variety of luxury resorts and glamping sites, including Ananti, Paraspasa, Resom, Hanwha Premium Resort, Jeju Artvillas, Hawaii Hilton and more 	
Reward	<ul style="list-style-type: none"> CEO Rewards : Select and reward outstanding performers each year through recommendation from business divisions Provide spot incentives for successful projects and business division rewards 	
Hobbies & Sports Programs	<ul style="list-style-type: none"> Operate 12 in-house clubs known as "Infomal" Year-end company-wide e-sports competition (online LoL game competition) Free rental of 2 books per month for 2 weeks through LG CNS e-Library 	<ul style="list-style-type: none"> Four free tickets for LG TWINS baseball games and four free tickets for Seoul FC soccer games each year Executive-only golf course membership benefits expanded to all employees (midweek) Hold company-wide futsal and soccer tournament (Chun FC)
Mental and Physical Healthcare	<ul style="list-style-type: none"> One-on-one psychological counseling with a professional counselor provided at the employee's convenience through our in-house counseling center Operating a mind sanctuary : Regularly sending out newsletters with articles and methods to help with mental care Providing health therapy : Professional therapists hired to provide professional massages Operating programs for team building and mental care of employees : Rooftop terrace parties, Party on Site, One-day trip, etc. 	<ul style="list-style-type: none"> Send PM support gifts, project support gifts In-house fitness center Supporting medical expenses for serious diseases, group insurance, flu vaccination, etc.
Promotional Discounts for Employees	<ul style="list-style-type: none"> Offering promotions and discounts on hotels, airline tickets, amusement parks, etc. Providing life care points : Purchases of LG Electronics devices, groceries, etc. 	

Information Security

Policy

Information Security Policy

LG CNS has developed its information security management system to ensure compliance with the three major Korean data-related laws (the Personal Information Protection Act, the Act on Promotion of Information and Communications Network Utilization and Information Protection, and the Credit Information Use and Protection Act), the Electronic Financial Transaction Act, the Act on the Protection and Use of Location Information, as well as overseas information security laws and regulations.

Our information security management system is governed by a regulation that declaratively sets out management’s commitment to and direction for information security, as well as 16 specific rules categorized by information security area. The 16 detailed rules are organized into common and business-specific areas, enabling swift and flexible responses to rapid internal and external environmental changes and the incorporation of new technologies resulting from changes in business methods and models. We provide more detailed information in the form of guideline to employees who perform relevant duties.

Policy Framework

Category	Description
Regulation	A document that defines the basic principles and guidelines for performing work as stipulated in company regulations
Detailed rules	A document that describes specific methods for implementing the basic principles and guidelines to perform the work stipulated in the regulations
Guideline	A document that can be used for guidance, promotion, and education for employees who perform relevant duties

Information Security Detailed Rules

Area	Detailed Rules	Description
Common area	Information Security Management System	Detailed rules for establishing a management system for information security organizations, regulations, and duties
	Information Asset Security Management	Detailed rules for managing information assets, including classification, disposal, destruction, and evaluation
	Personnel Security	Detailed rules for personnel management, including training for employees and external personnel
	Physical Security	Detailed rules for managing access to the work environment, bringing items into and out of the workplace, and managing computer equipment
	Information System Security	Detailed rules governing responsibilities, authorities and security management of information systems
	Privacy Protection	Detailed rules for managing and processing of personal information
	Cloud Security	Detailed rules for the introduction, design, development, and operation of cloud services
	Security Incident Response	Detailed rules for preventing security incidents and establishing response systems in the event of an incident
Business-specific area	IT Disaster Recovery	Detailed rules for IT disaster recovery systems, plans, and mock drills
	IDC Security	Detailed rules governing the construction, access control, monitoring, and protection of integrated information and communication facilities
	SaaS Service Information Security	Detailed rules of information security management for SaaS services
	SaaS Service Global Compliance	Detailed rules for establishing and managing overseas compliance protection systems
	Personal Credit Information Protection	Detailed rules for establishing a personal credit information protection system and complying with laws and regulations
	Electronic Financial Information Security	Detailed rules for operating an electronic financial information security system
	Pseudonymous Information Security	Detailed rules for organizing and operating an expert data combination agency
	Location Information Security	Detailed rules for protecting, handling and managing location information

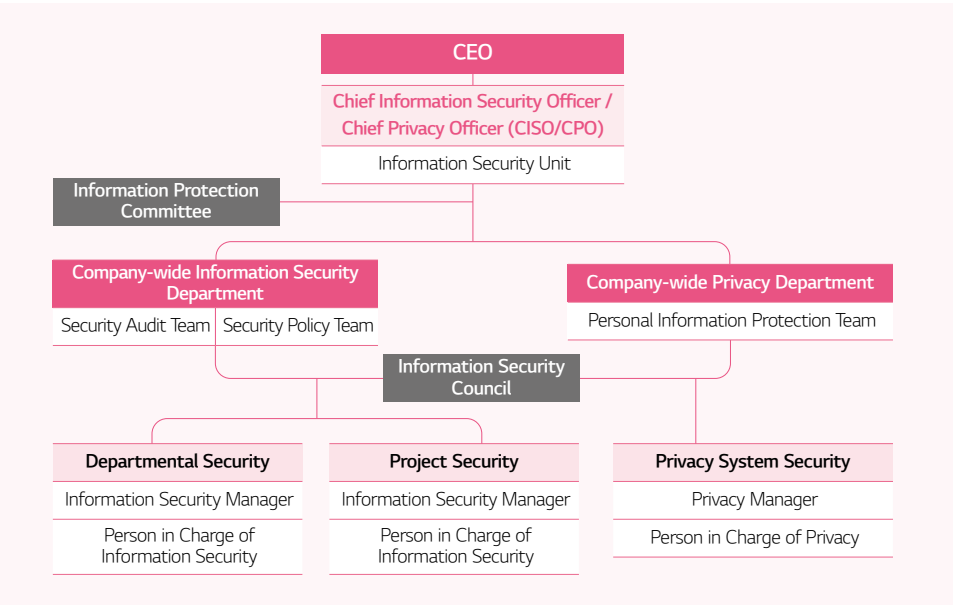

Information Security

Information Security Governance

LG CNS has appointed a CISO (Chief Information Security Officer), CPO (Chief Privacy Officer), and credit information managers and protectors to engage in information security activities company-wide, and requires each department to designate an information security manager and a person in charge of information security. The information security manager and person in charge of information security are responsible for personnel management, key asset management, and communication regarding security issues within their respective departments.

In particular, departments that handle personal information designate a privacy manager and a person in charge of privacy to protect personal information, and hold regular meetings with key internal and external service security managers to discuss security policies, response measures, and work progress.

To strengthen the company's expertise and independence in the area of information security, LG CNS operates the Security Office directly under the CEO, which is divided into three sub-organizations : the Security Audit Team, the Security Policy Team and the Personal Information Protection Team. We hold an Information Protection Committee and Information Security Council meeting at least once per year, or whenever important security decisions need to be made or company-wide security measures discussed.

Personal Information Protection System

LG CNS recognizes the importance of personal information, and is making an ongoing effort to protect it. To ensure that personal information is handled securely, we perform a privacy impact assessment before introducing a personal information processing system. Additionally, we perform an annual inspection of internal management plans for personal information, provide training to employees handling personal information, and inspect the management status of personal information consignee. We operate a specialized system that monitors the current status of personal information management, and regularly review the management status to identify and address vulnerabilities. Also, we strive to raise employee awareness of the importance of preventing personal information leaks through frequent mock drills.

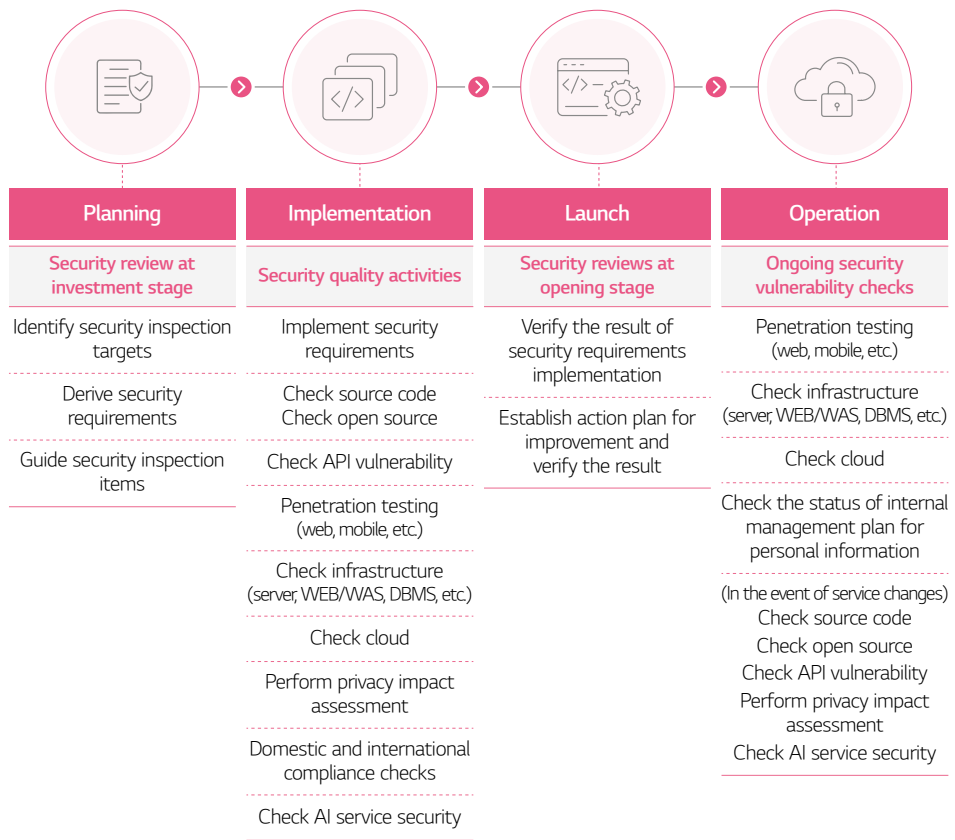

Key Security Activities for Each Stage of The Personal Information Processing System Life Cycle

Introduction	Operation	Termination
Domestic and international compliance checks of privacy impact assessment	Inspection of internal personal information management plans and the status of the personal information consignee	Inspection of personal information disposal
<ul style="list-style-type: none">• Establishment of a personal information management system<ul style="list-style-type: none">- Collect minimum personal information- Restrict the collection of uniquely identifying information and sensitive information- Establish privacy policy to comply with laws and regulations and protect the information subjects' rights• Measures to ensure the security of personal information<ul style="list-style-type: none">- Encrypt personal information during transmission- Identify personal information to be encrypted, and encrypt it- Log personal information access records	<ul style="list-style-type: none">• Inspection of internal personal information management plans<ul style="list-style-type: none">- Appoint a privacy manager and a person in charge of privacy- Manage personal information handlers- Control access and grant minimum access authorization• Inspection of the status of personal information consignee<ul style="list-style-type: none">- Establish an internal management plan for personal information- Conduct personal information protection training- Protect the PCs used by personal information handlers- Establish procedures for responding to personal information leakage	<ul style="list-style-type: none">• Disposal of personal information<ul style="list-style-type: none">- Digital files : Permanently delete using a method that makes their restoration impossible- Records, printed materials, written documents, and other recording media : Shred or incinerate• Confirm the final termination of the personal information processing system

Information Security

Security Inspection System

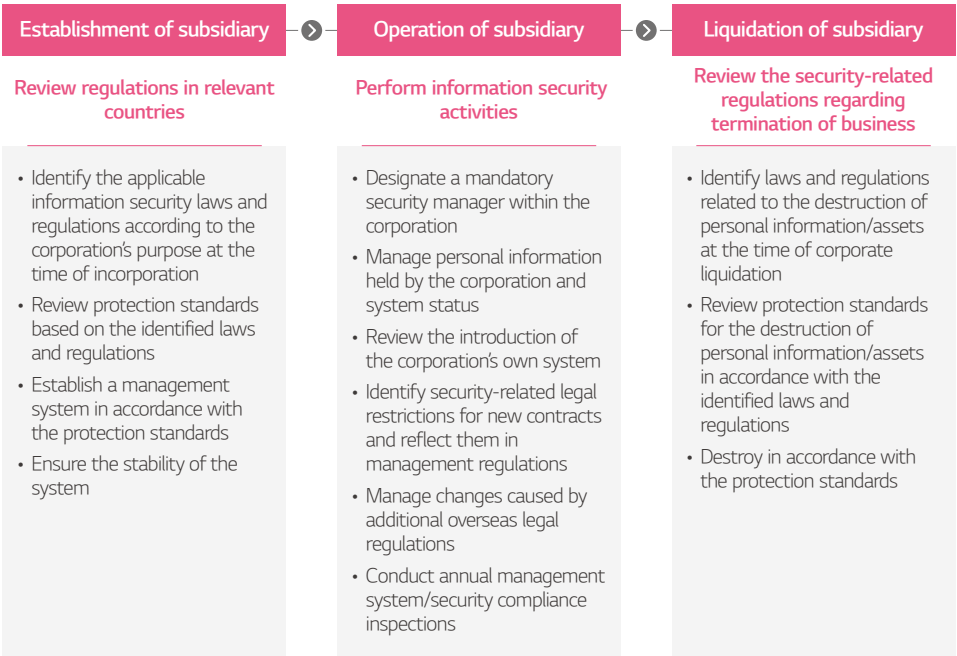

LG CNS derives security requirements from the planning stage to strengthen the security of its solutions and services. During the implementation stage, security quality control activities are performed, and prior to launch, security reviews are conducted to ensure that the derived security requirements have been properly implemented. In addition, security vulnerability checks are performed on an ongoing basis during the operation stage. LG CNS continuously manages security by establishing and operating these security inspection systems.

Response to International Personal Information Security Regulations

International regulations on information security and personal information protection are being strengthened with the introduction of the EU (European Union) GDPR (General Data Protection Regulation), China's Network Security Law and Vietnam's Personal Information Protection Law. In response, LG CNS is working in collaboration with overseas subsidiaries to ensure the safety of its overseas operations. We are thoroughly reviewing and deploying countermeasures in key areas to mitigate the adverse effects of these regulations. In addition, the information security organization at the headquarters operates a security compliance management system covering the entire cycle from the establishment to the operation and liquidation of overseas subsidiaries. We collaborate closely with overseas subsidiaries to meet overseas security requirements, identify potential threats in advance, and establish protective measures.

Operation of overseas security regulation management system

Information Security

Goal

Information Security Management Goal

LG CNS, a leading IT company, is proactively filling the gaps in our security and strengthening our response system to new and increasingly sophisticated hacking attacks. In doing so, we are working toward our ultimate goal of “zero security incident”

Based on a security strategy of “Zero Trust,” we are implementing single sign-on (SSO)¹⁾ and multi-factor authentication (MFA)²⁾ for thorough security authentication management. To strengthen security for our overseas operations, we have established SASE³⁾. We grant limited access permissions based on a secure security authentication management framework. To continuously detect vulnerabilities and anomalies, we have developed an information leakage monitoring solution that utilizes our proprietary AI security solution, SecuXper AI. We also introduced a personal information access log management solution to continuously improve our security environment

LG CNS is implementing a Zero Trust security paradigm to enable a proactive response to changes in the IT environment result from AX.

What is Zero Trust? (2010, John Kindervag)

Trust is a security vulnerability

► Nothing can be trusted!

- 1) Thorough security authentication and management without exception (all users and devices)
- 2) Implementation of security policies that will minimize the scope of damage, such as limited access rights
- 3) Continuous detection of vulnerabilities and anomalies, enhancement, and improvement after authentication

1) SSO (Single Sign On) : A security application solution that allows users to log in to various corporate systems and services with a single login
 2) MFA (Multi-Factor Authentication) : A security technology that uses multiple authentication factors for identity verification when users access services and systems
 3) SASE (Secure Access Service Edge) : A cloud security technology that combines network and security functions to quickly and efficiently respond to security issues in mobile, remote working, and cloud environments at the service edge
 4) Data of 2023 was disclosed in June 2024
 5) EDR (Endpoint Detection and Response) : A solution that detects, analyzes and responds in real time to malicious activities taking place on endpoints to prevent the spread of damage

Disclosure of Information Security Activity

Since 2022, LG CNS has been transparently disclosing its information protection activities and investment status by posting the information protection status on the information protection disclosure website (isds.kisa.or.kr). As disclosed in 2024⁴⁾, the investment in information protection amounted to about KRW 23.1 billion and the total number of employees dedicated to information protection was 155. We have carried out major activities such as AI anomaly monitoring enhancement, cloud security control enhancement, and the introduction of cloud resource EDR⁵⁾, and have continuously expanded our investment and increased the number of dedicated personnel since the initial disclosure in 2022.

※ The disclosure of the 2024 information security investment status is scheduled in June 2025 (isds.kisa.or.kr)

Information Security

Activity & Performance

Activities for Enhancing Information Security Awareness

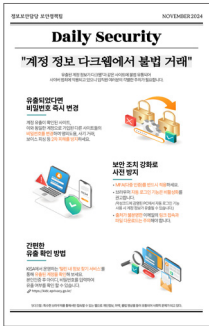

LG CNS engages in a range of activities to raise the security awareness of our employees. Employees must sign a security pledge once a year, and receive mandatory information security and personal information protection education. We regularly post materials that reinforce security awareness, in card format on our company bulletin board, and operate a website that explains complex internal security policies in an easy-to-understand manner. We also strive to strengthen the security awareness of our employees by regularly distributing personal information protection and security compliance letters and having them undergo malicious email simulation training. In addition, we conduct information security training for our suppliers to enhance security at project sites.

Announcement of LG CNS security policy website

Posters to increase information security awareness

Program	Description	Target
Personal information protection education	Precautions in protecting personal information for personal information handlers/persons in charge/managers	Personal information handlers/persons in charge/managers
Basic education on information security	Quiz-style training on the company's security policies and precautions to be observed during work	All employees including suppliers and overseas subsidiaries
Security training for developers	Security compliance to develop a system without vulnerabilities	Project team members
Security training for suppliers	Information protection precautions to be observed by suppliers	Employees of suppliers

Malicious Email Simulation Training

All LG CNS employees regularly undergo malicious email simulation training to help avoid the malware infections caused by malicious emails and raise awareness. Based on the training results, we reward employees who detect malware quickly, encouraging continuous improvement in employee participation and security awareness.

Awareness-raising activities through simulation training

Simulation training results – Security awareness level indicator

※ Security awareness level indicator : percentage of personnel who recognized security threats in training situations and responded appropriately

Information Security

Key Information Security Activities

LG CNS has established an information security management system to protect our information assets from security threats, and conducts regular activities to inspect and improve the system.

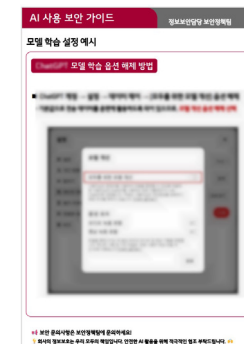

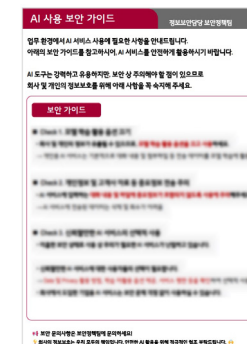

As an AX specialist, LG CNS provides reliable services to clients by establishing security measures from the initial stages of implementing/introducing AI services and applying them to the operating environment. In addition, we distribute a security guideline that employees must follow when using AI to help maintain a safe AI work environment. Moreover, to clarify security responsibilities and obligations related to AI usage, we conduct various security awareness activities, such as collecting AI usage information security pledges from all employees, to establish a culture of safe AI utilization.

Security Area	Key Activities
Establishment and Management of Information Security Policy	<ul style="list-style-type: none"> Establish and manage company-wide information security policies and guidelines Respond to information security-related laws and regulations Revise and publish regulations at least once a year
Personnel Security	<ul style="list-style-type: none"> Conduct security training and awareness activities at least once a year and carry out ongoing security awareness activities Promote company-wide security activities Newly-hired employees and employees who are leaving the company must sign a Security Pledge and undergo a security check Manage the security of supplier employees when joining a project
Outsider Management	<ul style="list-style-type: none"> Specify compliance with personal information protection when contracting with suppliers Regularly monitor and audit on personal information consignees
Security Checks	<ul style="list-style-type: none"> Conduct regular and ad hoc audits of administrative, physical and technical protective measures Operate and check the personal information management system for compliance with personal information protection Check system vulnerability and penetration testing
Response to Information Security Incidents	<ul style="list-style-type: none"> Establish information security incident response procedures and conduct simulation training at least once a year
Physical Security	<ul style="list-style-type: none"> Enforce access control according to the security importance of each site

Key Security Measures for AI-powered Services

Security Area	Key Security Measures
User Security (Preventing information leaks)	<ul style="list-style-type: none"> Use only authorized AI services at work Conduct regular awareness activities and trainings Monitor the status of new AI services and distribute usage guidelines throughout the company
System Security (Responding to hacking and virus attack)	<ul style="list-style-type: none"> Conduct vulnerability assessments for each area based on AI usage Allow access only to authorized users through secure authentication methods Use dedicated space (tenant) Encrypt data and transmission channels Operate a security system capable of responding to external attacks Prevent input data and stored data from being used to train external models
Personal Information Protection (Compliance)	<ul style="list-style-type: none"> Filter, correct, or delete personal information included in generated content Conduct privacy impact assessments Log user/administrator actions and personal information access records Apply filtering to prevent personal/sensitive information from being included in prompts

Security Guide for Using AI

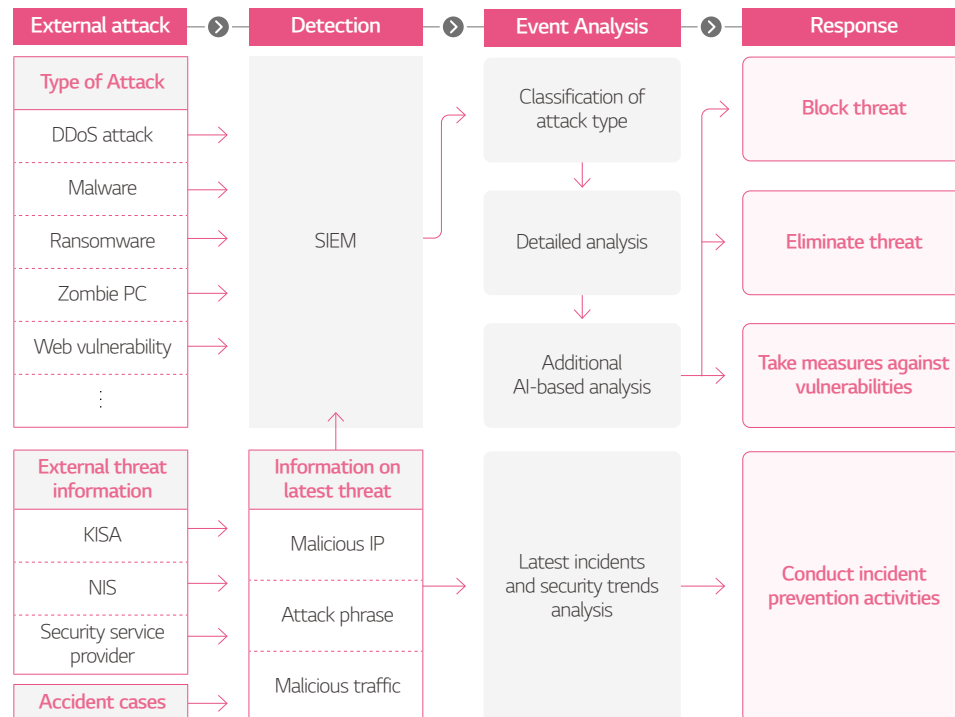

Information Security Pledge for Using AI

Information Security

Activities to Prevent External Attacks

With the recent increase in threats to industrial facilities and external attacks for personal information leak, LG CNS is constantly carrying out preventive activities to prepare for more intelligent external attacks like hacking and distribution of malicious codes. To prevent the spread of damage, we are operating the Security Information and Event Management (SIEM) service, which detects and promptly responds to intrusion threats. In addition, we strive to create a safe working environment by introducing solutions to block malware and ransomware delivered through e-mail.

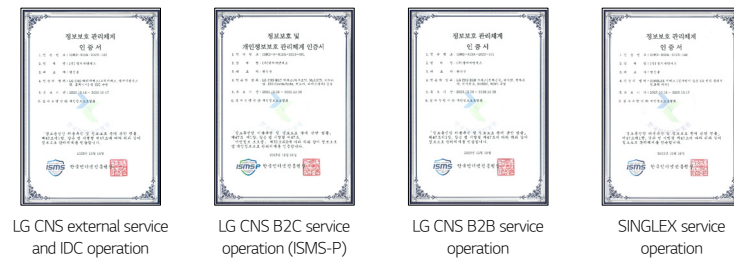

Security Information and Event Management (SIEM)

Internal and External Certification Status

LG CNS has established and operates technological and physical information security systems to protect our critical information assets from growing security threats. In recognition of our efforts, LG CNS obtained the ISO 27001 certification in 2013 from the ISO¹⁾, and has maintained it ever since. In addition, we have obtained and maintain domestic certifications, including ISMS²⁾ and ISMS-P³⁾. In 2024, we received the highest-possible grade of S (100 points) in the information protection assessment⁴⁾, proving the excellence of our personal credit information management system.

Information Security Management System Certification (ISMS, ISMS-P)

Information Security Management System Certification (ISO 27001)

PCI-DSS

1) ISO : International Organization for Standardization

2) ISMS : Information Security Management System

3) ISMS-P : Personal Information & Information Security Management System

4) Information protection assessment : A system in which companies submit their self-assessments of the management and protection of personal credit information to the Financial Services Commission for evaluation

Safety and Health

Policy

Safety and Health Management Policy

LG CNS recognizes safety and health as an uncompromising top priority for business management, and has established and implemented safety and health policies and goals to ensure that all employees can work in a safe and healthy environment.

Our top management demonstrate their commitment to safety and health by regularly communicating safety messages to every employee and team, while our employees clearly understand their roles and responsibilities and actively participate in safety and health activities. In addition, the "2025 Safety and Health Plan", which includes Safety and Health management policies, organizational structure, budget, and work plans, has been reported to and approved by the Board of Directors.

Safety and Health Policy

Safety and Health Policy

LG CNS recognizes safety and health as non-negotiable priorities in business management, and is committed to fulfilling its responsibility and obligation to create a safe and healthy workplace.

- When making decisions related to business activities, safety and health are prioritized over efficiency and profitability.
- We strictly comply with all safety and health regulations, and maintain and continuously improve a management system that exceed legal requirements.
- We conduct ongoing activities to identify and address hazardous and risky factors to prevent accidents, and strengthen our crisis response capabilities to minimize damage.
- All organizations and members clearly recognize their responsibilities and roles in ensuring safety and health, and actively participate in relevant activities.
- We transparently provide necessary safety and health information to employees and stakeholders, and communicate sincerely.

Safety and Health Goals

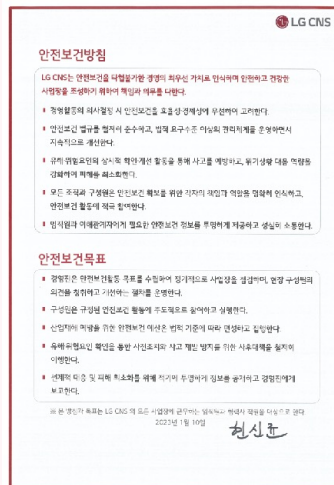

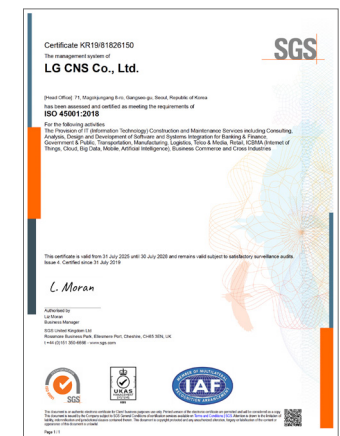

- The management establishes goals for safety and health activities, conducts regular inspections of business sites, and operates a procedure to listen to the opinions of employees for improvement.
- Employees actively participate in and implement designated safety and health activities.
- Safety and health budgets are allocated and executed to prevent accidents, in accordance with legal standards.
- We implement preventive measures to identify hazardous and risky factors, and rigorously enforce post-incident measures to prevent recurrence.
- We disclose information transparently and in a timely manner to respond proactively and minimize damage, and report to the management.

Safety and Health Management System

LG CNS operates a safety and health management system for each data center and project, centering on a dedicated Safety & Health Environment Office, which is responsible for company-wide safety and health management. Based on the Safety & Health Management Regulation, we appoint safety & health officers for each business site, listen to the opinions of employees through the Occupational Safety and Health Committee and Labor-Management Council, and implement improvement activities accordingly.

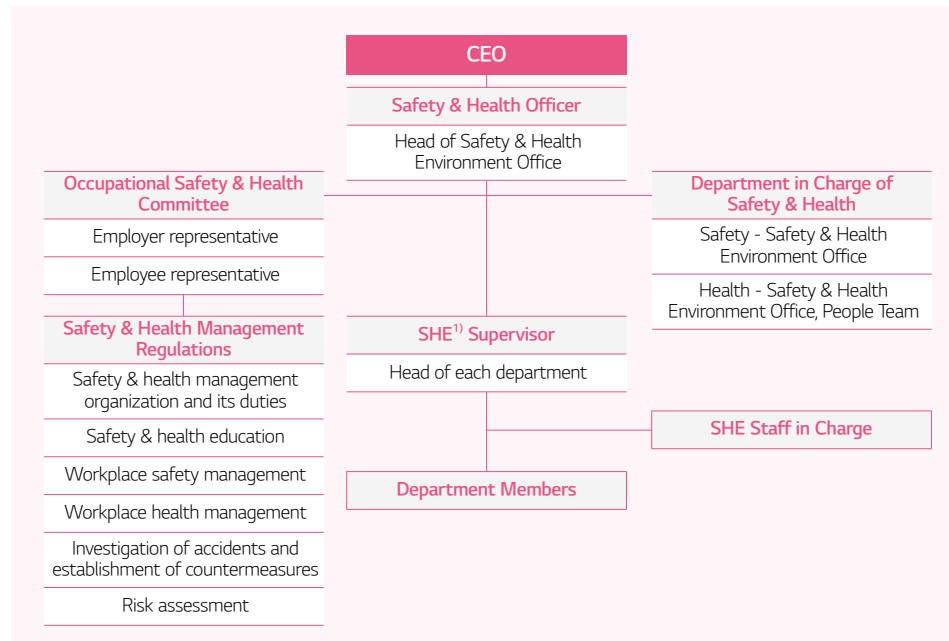

LG CNS obtained ISO 45001 Safety and Health Management System certification for the first time in 2019. The certification covers all of the company's domestic business sites, including its headquarters, data centers, and construction projects. A total of 6,800 employees (98% of the total) work in accordance with the Safety and Health Management System. We conduct internal and external audits across the entire organization every year to maintain the Safety and Health Management System.

ISO 45001 Certificate

Safety and Health

Company-wide Safety and Health Governance

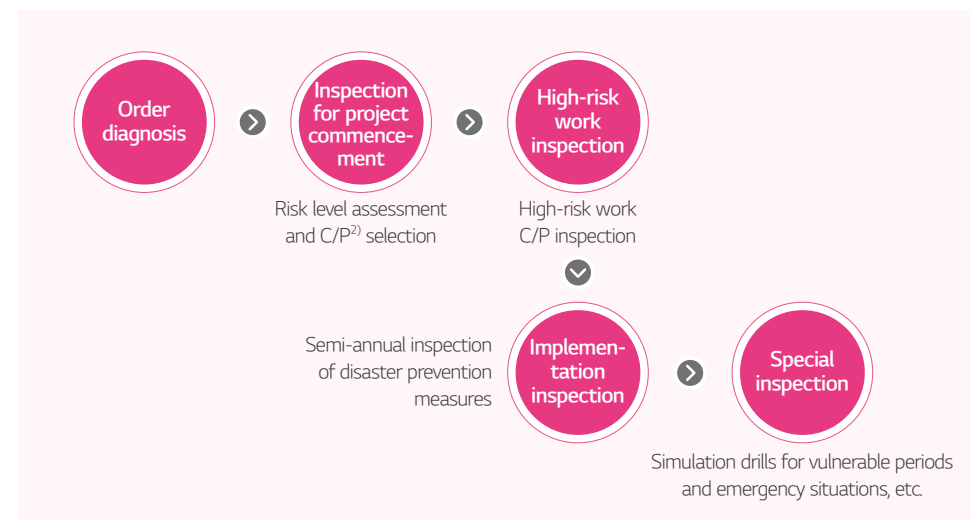

Safety and Health Management by Business Site

Business Site	Safety and Health Management System
Data Center	<ul style="list-style-type: none"> Manager : Appoint the head of the cloud data center business unit General manager : Designate the person in charge within the data center operation team Management supervisor : PL by center, Head of supplier Council : Occupational Safety and Health Committee, Safety and Health Council
Construction Project	<ul style="list-style-type: none"> Manager : Appoint PM Safety Manager : Appoint a safety manager for construction projects with a budget of KRW 5 billion or more Health manager : Appoint a health manager for construction projects with a budget of KRW 80 billion or more Management supervisor : PL by construction type, Head of supplier Council : Safety and Health Council, Labor-Management Council (construction projects with a budget of KRW 12 billion or more)

Safety and Health Risk Management System

LG CNS operates a safety inspection system for construction projects with a high risk of accidents. Safety inspections are conducted at the time of order receipt and project initiation, followed by high-risk work inspections, semi-annual compliance inspections, and special inspections, which are conducted in a manner tailored to each site. To reflect the requirements of the Serious Accidents Punishment Act, which has been expanded to apply to all construction sites regardless of project scale, we have reorganized the implementation framework for construction projects with budgets under KRW 5 billion. For projects valued at KRW 2 billion or more but less than KRW 5 billion, we have expanded on-site implementation inspections led by the Safety & Health Environment Office. For small-scale projects valued at less than KRW 2 billion, we operate an implementation system centered on online inspections that reflects the core provisions of the Act and the specific conditions of the construction projects.

In addition, LG CNS conducts ongoing safety and health qualification assessments at each stage of the purchasing process (registration, selection (contract), and termination) for construction equipment and IT suppliers that do business with us. Furthermore, we perform annual regular assessments of our suppliers to evaluate their safety and health management capabilities (qualified/unqualified) to ensure that they are qualified to collaborate with us.

1) SHE : Safety Health and Environment

2) C/P (Critical Path) : Seven types of work with a high risk of serious accidents (work at height, hot work, work operating construction equipment, architecture/civil engineering, work in electricity, work in confined space, trial run) are designated as high-risk work and subject to management

Safety and Health

Activity & Performance

Reducing Hazardous Factors at Business Sites

LG CNS proactively undertakes various activities including risk assessments and on-site inspections to identify hazardous factors that may arise at work and during operations, and reduce exposure to such risks. We perform initial, regular (annual) and ad hoc (twice a month) assessments, which go through the following process : ① Preparation, ② Identification of hazardous and risky factors, ③ Risk determination, ④ Development and implementation of risk reduction measures, ⑤ Sharing of risk assessment results, and ⑥ Record-keeping and preservation of records. In addition, we conduct risk assessments using a checklist method for office workers and a high/medium/low risk determination method for construction projects, reflecting the characteristics of business sites. In 2024, LG CNS completed improvement measures for a total of 217 non-conformities identified through 125 safety inspections, which included refurbishing aging forklifts and implementing measures to prevent the removal of safety pins from fire extinguishers. Additionally, for overseas construction projects, we have developed and distributed an overseas construction safety management implementation guide based on the domestic safety management system, and regularly verify compliance with the guide. Furthermore, we have established a process to investigate accidents and establish countermeasures in the event of an accident. Based on the process, we ① perform emergency measures, ② report according to the reporting system, ③ investigate the cause of the accident, ④ establish and implement measures to prevent recurrence, and ⑤ manage records of industrial accidents. Through this process, we strive to minimize damage and prevent the recurrence of accidents.

Strengthening Safety and Health Support for Suppliers

LG CNS invited representatives and executives (16 companies, 32 people) from major construction suppliers in November 2024 to support the establishment of a safety and health management system. We provided education on "Measures for Establishing a Safety and Health Management System for Suppliers in Response to the Serious Accidents Punishment Act" and "Revised Risk Assessment." Also, a consulting was conducted with an external institution to improve the safety and health guidelines for suppliers in order to help our suppliers smoothly implement LG CNS' safety and health standards.

Enhancing Data Center Safety Management and Fire Prevention

LG CNS is preventing serious accidents by applying digital twin technology to data centers. The technology enables the immediate identification of key power facilities that are difficult to recognize in blueprints, allowing for a quick response when issues arise. In addition, the technology can identify the movements of electrical facility room workers in real time, and controls workers by alerting them when they leave designated areas.

Digital twin technology was fully implemented at the Hanam Center in 2024, greatly helping new personnel to understand the equipment and improve their problem-solving skills. It is also being used for safety management during operations. This year, we are adding a feature that allows immediate identification of problems with critical equipment (UPS/batteries) at the Busan Center.

LG CNS has installed AI CCTV and very high-speed smoke detectors (VESDA)¹⁾ to prevent fires in data center battery rooms. We are also replacing batteries that have reached the end of their service life with fire-safety certified (UL95401A²⁾) batteries. In addition, we are installing fire spread prevention equipment to prevent fires from spreading, and have enabled initial fire control for batteries that have not yet reached the end of their service life.

Fire spread prevention equipment (before operation) Fire spread prevention equipment (after operation)

Receiving "Disaster Mitigation Excellence Certification"

In 2025, LG CNS obtained Disaster Mitigation Excellence Certification from the Ministry of the Interior and Safety for its four data centers (Sangam, Busan, Gasan and Hanam). The certification is awarded to companies that have been evaluated as having an outstanding Business Continuity Management System (BCMS) that ensures uninterrupted business operation in the event of a disaster or other crisis. LG CNS' data centers can recover core systems in the shortest possible time and minimize damage in the event of disasters. Notably, the data centers have been evaluated highly for their stable power supply capabilities, which are supported by uninterruptible power supply (UPS), redundant substations, and self-generating systems, as well as their disaster response capabilities, which utilize digital twins and AI CCTV technology to respond to fires, earthquakes, and other disasters.

Disaster Mitigation Excellence Certification

1) VESDA (Very Early Smoke Detection Apparatus) : A smoke detector that analyzes smoke particles in the air in a laser chamber and detects their components, with an excellent level of sensitivity that can detect even invisible smoke (1,000 times more sensitive than existing fire detectors)
 2) Fire-safety certification (UL95401A) : A safety standard established by UL (Underwriters Laboratories), a US safety standards development organization. It specifies test methods for evaluating the fire and explosion risks associated with thermal runaway in Battery Energy Storage Systems (BESS)

Safety and Health

Listening to Opinions on Safety and Health Improvement

LG CNS operates a number of different safety and health communication channels for its employees and those of its suppliers. The headquarters and the Sangam IT Center hold quarterly Occupational Safety and Health Committee meetings to discuss key decisions related to improving safety and health at business sites, and to diligently implement and address any necessary improvements. We conduct semi-annual surveys targeting employees in charge of SHE to gather opinions on safety and health, and take action in the identified areas to achieve improvements. Also, we operate online channels through the safety and health opinion submission/reporting banner on the main page of the internal portal and the improvement request menu within the Safety and Health Environment System (SHE System) to enable employees to express their opinions.

LG CNS holds regular meetings on the safety and health environment and improvement surveys for its suppliers. For construction projects, we hold a Labor-Management Council (bi-monthly for projects with construction costs over KRW 12 billion) and a Safety and Health Council (monthly for projects with construction costs under KRW 12 billion). These councils provide an opportunity for on-site workers to share their opinions, and allow us to continuously strive for substantial improvements.

In 2024, we held in-person meetings with the representatives and executives (16 companies, 32 people) of major suppliers to listen to their opinions and discuss various measures for improvement.

Improvement of Emergency Response Capabilities

LG CNS is strengthening its emergency response capabilities by holding emergency response training sessions in the first and second halves of the year. We conducted mock drills to inspect emergency contact lists at the team level across the company, as well as internal mock drills tailored to the characteristics of data centers and construction projects. Notably, in October 2024 we conducted a real-life evacuation drill simulating a fire situation through a public-private cooperation project (joined by local agencies including district offices, fire departments, and police stations), along with the Safe Korea Exercise. Since 2022, we have been holding company-wide CPR training that follows the government's severe disaster reduction roadmap, and have continuously increased the number of trainees each year. In-house professionals in the Safety & Health Environment Office with CPR instructor certification and nurses provide the training to all employees, both regular and ad-hoc training (for external projects). We aim to ensure that more than 50% of our employees are capable of performing CPR by 2025; as of 2024, 1,142 employees (cumulative total of 2,304) have completed CPR training. Through various CPR training programs, including new employee training, VR CPR training, and on-site training, we strive to ensure that all employees can respond calmly and effectively in an emergency situation.

In addition, we provide safety and health education that is tailored to each business site's specific characteristics to ensure compliance with legal requirements. For construction projects, we implement and manage job-specific training (for managers, safety managers, etc.), regular training (for management supervisors, workers, etc.), and special training (for hazardous tasks, etc.) at the respective site. Although the headquarter is exempt from mandatory safety and health education, we provide new hires with eight hours of online training through a specialized external institution to enhance their safety awareness. In 2024, 564 new hires completed the training.

Enhancing and Managing Employees' Health

LG CNS carries out regular health checkups to protect the health of its employees, and provides company-wide health management services for employees with abnormal test results. Focusing on the prevention and management of cardiovascular diseases (such as stroke and heart attack), we adjust the comprehensive health checkup items annually. We offer guidance on comprehensive health checkup item selection for employees who find it difficult to select items. For high-risk groups, we offer personalized management, from designing health checkup items that can detect diseases early to managing results.

In 2024, we invited a cardiologist to host an online lecture called "Checking Facts of Vascular Health," during which employees could ask questions live. In 2025, we continue to promote employee health through various activities, such as providing stretching instructions on elevator screens, around the workplace, and in rest areas so that employees remember to stretch during their work breaks.

Poster for introducing how to stretch

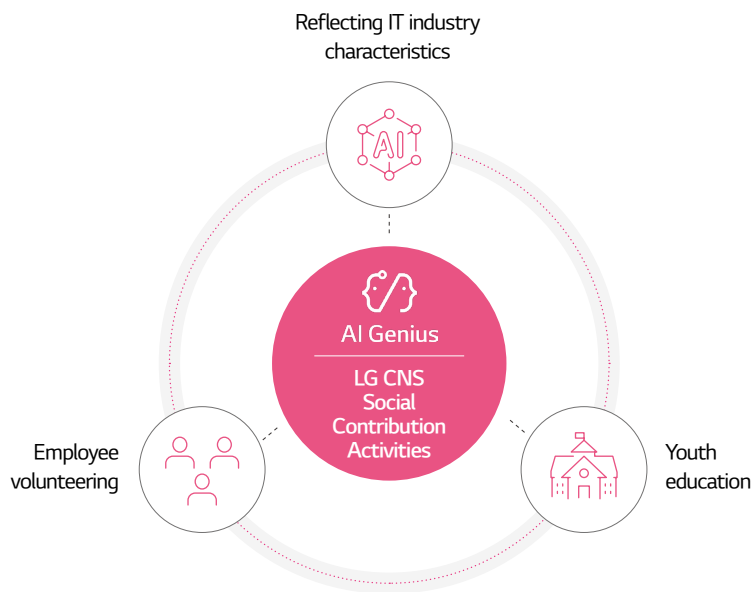

Social Contribution

Policy

Social Contribution Policy

LG CNS is expanding its AX (AI Transformation) social contribution activities based on its IT capabilities. By selecting and focusing on the target of our support, we provide customized programs tailored to their needs and maximize our effectiveness through partnerships with the government and professional institutions. In addition, rather than one-time monetary donations we are focusing on long-term social contribution activities with three directions : leveraging the characteristics of the IT industry, volunteering of LG CNS employees, and youth education activities. Through these efforts, LG CNS contributes to developing future talent by leveraging its AX capabilities and AI technology, thereby fulfilling its corporate social responsibility and contributing to the growth of local communities.

Three Directions of Social Contribution

Goal

Key Objectives of Social Contribution

LG CNS is running "AI Genius" and "AI Genius Academy" programs to help youths grow into future IT talents by leveraging its AX technology capabilities.

AI Genius & AI Genius Academy Status (accumulated figures as of 2024)

Results and 2025 Goal

	Category	Unit	2022	2023	2024	2025 Goal

	Number of beneficiary students	Person	3,501	3,398	2,978	3,000

Social Contribution

Activity & Performance

AI Genius

LG CNS runs its internally developed AX social contribution program "AI Genius" to foster aspiring IT talent. The classes focus on practical training and hands-on activities to help students develop their ideas and improve their problem-solving skill by learning the basics of software and AI. Since 2017, LG CNS has partnered with the Seoul Metropolitan Office of Education to provide free education to teenagers. In addition, we are continuously expanding the scope of our education to include remote, rural areas and vulnerable groups.

AI Genius

► Strengthening Contributions to Communities

LG CNS is strengthening its social contribution activities in the communities where its business sites are located. In 2024, we provided educational programs to approximately 220 first-year middle school students near the Hanam Data Center, and in 2025, plan to offer education in the Jukjeon area, where a new data center is set to open.

► Education for Schools for Students with Disabilities

LG CNS runs a program for students with disabilities who are marginalized in software education. Our education program allows students to create their own stories using generative AI, experience AI self-driving cars, and engage in AI art experiences. LG CNS is continuously working to bridge the software education gap between students who have the opportunity to learn and those who do not.

► Education for Schools in Rural Areas

To provide IT education opportunities to more students, LG CNS conducts AI education at schools in remote, rural areas. In 2024, we visited schools in rural areas such as Changnyeong, Gyeongsangnam-do, Inje, Gangwon-do, and Mungyeong, Gyeongsangbuk-do to provide educational programs. In 2025, we plan to provide education in Hwasun, Jeollanam-do, and Chungju, Chungcheongbuk-do.

Education for schools in rural areas

► LG CNS AX Experts' Volunteering

LG CNS employees participate in volunteer teaching and mentoring to help students explore their career paths and plan for the future. LG CNS experts who are working at the forefront of AX business such as AI, big data, and cloud computing serve as AI Genius program instructors to provide high-quality education to students. In addition, we have introduced a paid vacation system to support employees' volunteering.

LG CNS employee participating as an AI Genius instructors

► Education for Employees with Disabilities

On April 18, 2025, LG CNS held a one-day AI education program for its subsidiary Haengbokmaru Co., Ltd, a standard workplace for employees with disabilities. The program provided theoretical and practical training in basic AI concepts, generative AI, and autonomous driving, enhancing participants' understanding of LG CNS and AI, and offering them the opportunity to experience AI technology firsthand.

Education for employees with disabilities

Social Contribution

AI Genius Academy

AI Genius Academy is an educational program for high school students to support future software and AI talents. Since 2021, LG CNS has selected students with ambition and talent in the fields of software and AI to provide differentiated new information technology education and mentoring, and has directly assisted them in designing their careers through AI robot creation projects that incorporate new information technologies.

AI Genius Academy

▶ AI Open Class

This is the first course in the AI Genius Academy, where students are introduced to the fundamental principles and concepts of AI as they solve about 10 AI missions. The online content is free to high school students across the country who want to learn about AI, with mentors providing feedback as students solve the mission using videos and learning materials. Starting in 2025, we have established various customized AI courses, such as generative AI, Python, and physical computing. These courses allow students to choose the classes they want to take, helping them explore potential career paths and plan for the future.

▶ Boot Camp

This is a preparatory stage for the Advanced AI Project. Students come together at LG Science Park, where the LG CNS' headquarter is located, to decide on a team project topic and set goals and plans. Through programs such as special lectures by LG CNS employees and training in how to write project reports, students have the opportunity to share their career aspirations and learn together.

▶ Advanced AI Projects

During the Advanced AI Project, students carry out various activities to complete their project. This process provides students with opportunities to grow and develop their skills by exposing them to a variety of problem situations.

To help students complete their projects, LG CNS provides software and AI education, hardware production support, and expert mentoring, etc.

▶ AI Challenge Day

AI Challenge Day is an event at which students share the results of their final projects from the AI Genius Academy and receive awards for exceptional work. The event provides students with opportunities to learn from failure and experience a sense of accomplishment throughout the process. Through AI Challenge Day, LG CNS is committed to helping students grow into future AI experts.

AI Challenge Day

Supply Chain Management

Policy

Supply Chain Management Policy

LG CNS operates a system for selecting, maintaining, and managing excellent suppliers based on fair and clear criteria. Each year, we select suppliers based on objective evaluation criteria (transaction history, financial status, cooperation level, etc.) set forth in the regulations, and manage them through a four-level management system : strategic group, cooperation group, general group, and potential group. We provide financial, manpower, and technological support to our suppliers for their stable operation and growth. Accordingly, we sign fair trade agreements, participate in the Shared Growth Index evaluation, and operate an organization dedicated to cooperation with suppliers.

Subcontracting Management Policy

LG CNS strives to ensure fair transactions by complying with the Korea Fair Trade Commission's four practices for fair transactions in subcontracting, using the standard subcontract agreement, and complying with laws and regulations. By adhering to the Subcontracting Act, we keep all subcontracting transactions fair and transparent and foster a mutually beneficial cooperative relationship as a large corporation with small and medium-sized enterprises. We regularly monitor our compliance with the Subcontracting Act and ensure that improvements are implemented according to the monitoring results. We also provide subcontracting training to all employees.

Compliance with Four Practices for Fair Transactions in Subcontracting

In accordance with the Korea Fair Trade Commission's recommendations, LG CNS has incorporated the four key practices into its internal regulations to ensure compliance among all employees. We have also posted these practices on the suppliers' portal website, notified the relevant suppliers, and included them in contracts to actively promote fair trade practices.

Four Key Practices

- 1 Execution of appropriate contracts to promote a mutually beneficial cooperative relationship between large corporations and small and medium-sized enterprises
- 2 Fair selection (registration) of suppliers
- 3 Establishment and operation of an internal review committee for subcontracting
- 4 Proper issuance and retention of documents in subcontracting transactions

Goal

Key Supply Chain Management Goals

Through annual evaluations, LG CNS grants priority business opportunities to outstanding suppliers and supports their internal growth through various supporting activities. This leads to increased project success rates and expanded business opportunities. We aim to achieve long-term, solid growth, together with our suppliers.

Activity & Performance

Supply Chain ESG Management

LG CNS provides its suppliers with ESG self-assessment checklists and encourages them to conduct self-assessments. In addition, we offer ESG management and evaluation training to our major suppliers.

Management Scheme	Target	Description
Supply Chain ESG Training	20 suppliers (12 companies participated)	Training on understanding ESG management and evaluation
Supply Chain ESG Self-Assessment	105 suppliers (63 companies replied)	Environmental management, labor/human rights, employment and anti-discrimination, working environment, safety and health management, ethical management, etc.

Supply Chain Management

Support for New Hire Recruitment of Suppliers

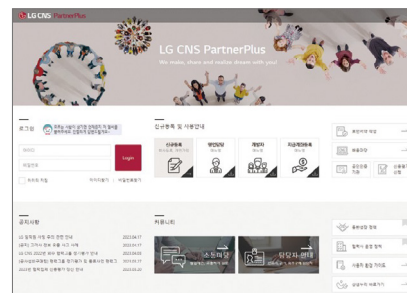

LG CNS helps small and medium-sized suppliers overcome one of their greatest challenges : securing software talent. To make it easier for job seekers to access information about our suppliers, we opened an online recruitment portal dedicated to LG CNS suppliers on a major domestic job search website. In 2024, 2,726 job openings of 39 suppliers, including regular and project positions, were posted, and a total of 31,218 applications applied. In addition, LG CNS operates the U-Camp Software Developer Program. Launched in 2006, the nine-week intensive software development training program targets prospective hires from suppliers. The outstanding talent cultivated through this program is hired by suppliers immediately upon their completion of the training. In 2024, 15 participants enrolled in the program, with 13 successfully completing it. A portion of the education costs were funded by government support through the “Win-Win Job Creation Program”, amounting to KRW 63 million. Through the U-Camp Software Developer Program, a cumulative total of 39 classes have been held and more than 1,000 new employees have been employed by suppliers.

Competency Development Support

LG CNS has established the Supplier Learning Center, an online education portal that provides supplier employees with free IT training in AI, big data, and the cloud, as well as job-related training on personal information protection. In 2024, a total of 268 courses were offered, and 2,735 supplier employees completed the training.

Strengthening Communication with Suppliers

For active communication with our suppliers, LG CNS operates the “Partner Communication Forum” on the PartnerPlus web portal. Through this website, suppliers can freely propose business and consult about the difficulties and problems they encounter during collaboration, as well as request improvements to inconveniences such as contract procedures and payment.

Dedicated website for suppliers (PartnerPlus)

Technical Support and Protection

LG CNS actively provides technical support and engages in exchanges with suppliers through joint R&D. We are taking the lead in protecting the technologies of our suppliers through a fair trade portal, a trade secret original proof service, and non-disclosure agreements (NDAs).

Selected as “Best Honorable Company” in the Shared Growth Index Evaluation

Thanks to our activities to grow together with suppliers, LG CNS received the best rating in the evaluation for seven consecutive years, from 2017 to 2023. We were once again selected as a “Best Honorable Company” for maintaining the highest rating for five consecutive years or more. In addition, in December 2024 we received a commendation from the Korea Fair Trade Commission for establishing a fair trade system and promoting a culture of mutual cooperation through fair trade agreements.

Plaque for being the Best Honorable Company on the Shared Growth Index for 7 Consecutive Years

Commendation for Fair Trade Agreement

Management Support

LG CNS provides direct and indirect management support to its suppliers. To assist suppliers' employees working at the Magok LG Science Park in their commute, we offer them access to the free commuter buses and Magok shuttle buses that we provide to our own employees. As of 2024, suppliers' employees had used these services a total of 72,440 times. In addition, we operate an online shopping website for suppliers, where they can purchase LG products at discounted prices.

Supply Chain Management

Improvement of Financial Support and Payment Terms

Since 2010, LG CNS has maintained a financial institution fund to promote mutual growth with our suppliers. We have provided operating funds such as R&D expenses and new business investment funds to enhance their competitiveness. In 2024, through our KRW 17 billion direct financial support program, we provided interest-free loans totaling KRW 9.1 billion to 10 companies. Through the Shared Growth Fund, which has a budget of KRW 30 billion, we provided loans totaling KRW 22.3 billion to 43 companies. In addition, LG CNS applies four payment deadlines per month for subcontractor payments and ensures full cash payment within 15 days of examination.

Direct Financing

- LG CNS self-created fund
- KRW 17 billion in interest-free loans
- Extended loans totaling KRW 9.1 billion to 10 companies

Shared Growth Fund

- Fund created jointly with a financial institution (IBK) based on LG CNS deposits
- Interest rate reduction, KRW 30 billion in fund size
- Extended loans totaling KRW 22.3 billion to 43 companies

Network Loan

- Low-interest financial loans based on transaction records with LG CNS

Direct Financial Support Loan Amount

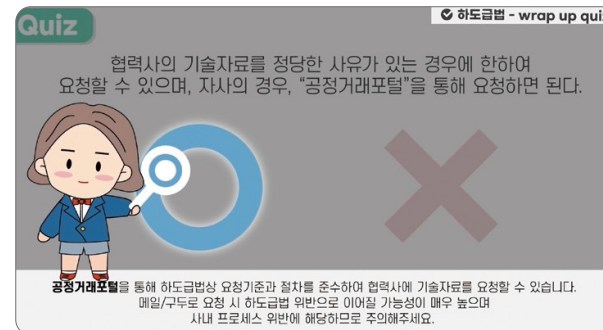

KRW 17 billion

Shared Growth Fund Size

KRW 30 billion

Subcontracting Training

LG CNS provides subcontracting-related training to all employees on issues in subcontracting and the latest trends. We also conduct monitoring to prevent violations of laws related to fair trade, with the findings from monitoring used to improve business processes and systems to prevent and manage fair trade risks.

Subcontracting training - Smart Collaborative Way

Quality Management

Policy

Quality Management Policy

For large-scale financial and public projects, proactive risk management and quality assurance are extremely important. LG CNS has established a quality management policy to practice quality management, and all employees perform their duties with the right perception of quality. We define quality value from three perspectives and have declared nine rules of action to ensure that we deliver the highest value to our clients, and we comply with these practices.

1 Purpose (Quality Management)

Lead the business innovation of our clients with the best IT services technology capabilities

3 Values (Quality Values)

9 Practices (Rules of Action)

Solution	<ul style="list-style-type: none">• Operate a solution management system covering all stages from planning to development, operation, and maintenance• Consistently manage the quality of solutions and products released to provide high-quality solutions to clients

Activity & Performance

Customer Satisfaction Management

As a Digital Business Innovator for our clients, LG CNS strives to enhance customer satisfaction by improving the quality of IT services in consideration of clients' pain points and by offering various services.

In 2024, we conducted a customer satisfaction survey regarding IT services that targeted a total of 64 corporate clients. The survey results showed a slight increase in satisfaction compared to the previous year. Clients were particularly satisfied with our technical and business expertise.

In addition to the survey, we listen to clients' feedback on an ongoing basis through a range of channels that includes our website, YouTube channel, and blog. We also operate an integrated "Voice of the Customer" management system to comprehensively analyze pain points and manage improvement progress.

Customer Satisfaction Status

Category	2022	2023	2024
Customer Satisfaction Index ¹⁾	75.5 points	75.8 points	82.2 points

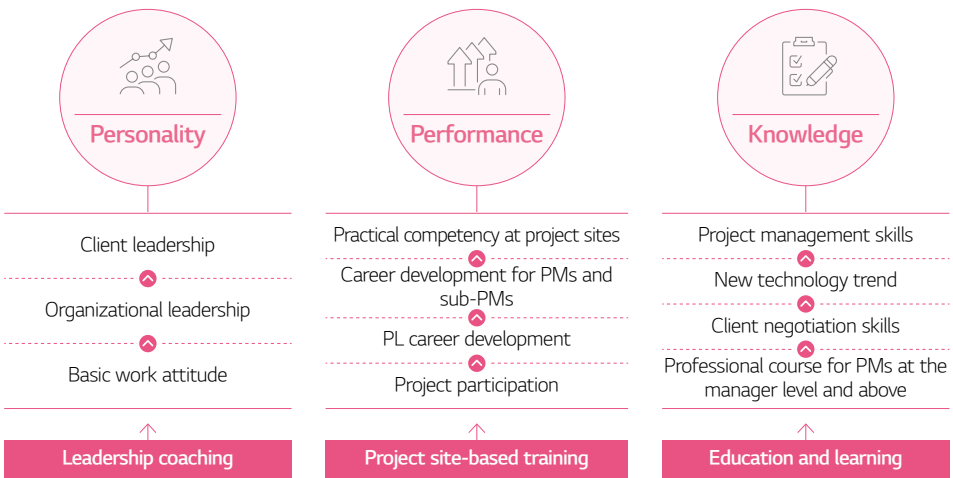

1) Customer satisfaction index scores are measured on a scale of 1 to 7 and converted to a score out of 100

Quality Management

PM Competency Enhancement

LG CNS values the DX competencies of project managers (PMs). To become DX partners for our clients, PMs receive training in project management methods developed through various case studies. LG CNS also operates a PM competency development system, a PM expert certification system, and a PM evaluation system to enhance PMs' competencies.

PM Competency Development Model

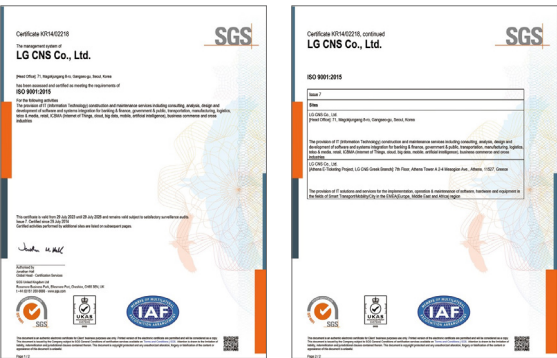

Education System for PM Development

Education	Content
General Project Management	Understanding PMs' roles and work procedures by scale and area, as well as developing PMs through practical exercises
Profit and Loss Management	Practical course on profit and loss management to understand the cost structure generated in projects, such as sales and operating income
Quality Management	Consulting with clients and establishing policies and procedures to ensure project quality, acquiring practical knowledge of key task quality
PM Leadership	Lectures on technology trends, communication, and leadership skills necessary for PMs, sharing project execution know-how, and discussions
ABC (DX Leadership)	DX leadership training in AI, Big Data and Cloud to lead DX

Quality Management Certification

LG CNS obtained ISO 9001 certification, an international standard, for all its business sites in July 1994, and has successfully completed follow-up audits and comprehensive re-certification every three years. Through the continuous improvement of our business processes, we have established a quality management system that enables all employees to achieve the best performance in their work.

GOVERNANCE

Corporate Governance

Composition of the Board of Directors

The Board of Directors (BOD) of LG CNS is a decision-making body that makes decisions on important management matters and business operations of the company and supervises directors in the performance of their duties, in accordance with the Articles of Incorporation. In October 2024, LG CNS established the Audit Committee, the Internal Transaction Committee, the ESG Committee, and the Independent Director Candidate Recommendation Committee within the BOD to enhance the transparency and efficiency of our corporate management. In addition, four new independent directors were appointed, bringing the total number of BOD members to seven (one inside director, two other non-executive directors, and four independent directors). To further strengthen the independence of the BOD and expand its oversight and balancing functions, another newly appointed non-executive director was elected as BOD chairperson at the ordinary general meeting of shareholders (OGM) in March 2025, with the aim of achieving long-term and sustainable growth.

Category	BOD Composition 2025 Annual Meeting of Shareholders				
	Name	Gender	Credentials	Term	Remarks

Appointment of Directors

LG CNS does not appoint inside directors through a separate committee, but nominates candidates following sufficient discussion at the BOD and appoints them by a vote at the shareholders' meeting. Independent directors are appointed by the shareholders' meeting after undergoing a rigorous screening process by the Independent

Director Candidate Recommendation Committee to ensure their independence and expertise as independent directors and their suitability for performing their duties based on the relevant laws and regulations, including Article 382, Paragraph 3 and Article 542-8, Paragraph 2 of the Commercial Act, and the regulations of the Independent Director Candidate Recommendation Committee.

Ensuring the Expertise of the Board of Directors

LG CNS has composed its BOD of directors with expertise in diverse fields to enable the BOD to make strategic decisions from a comprehensive perspective.

Expertise	Hyun, Shin Gyoong	Ha, Beom Jong	Kim, Yong Hwan	Lee, In Moo	Lee, Ho Young	Lee, Sung Joo	Chung, Hwan

Crisis management	•	•	•	•	•		
Technology/ Industry	•			•	•	•	•

Strengthening the Board of Directors' Independence and Preventing Conflicts of Interest

LG CNS has composed its BOD with a majority of independent directors to ensure its independence, and aims to foster the free exchange of opinions and independent decision-making in BOD meetings. In addition, to minimize potential conflicts of interest, we restrict transactions between directors and the company, and directors who have an interest in board resolutions are not allowed to exercise their voting rights.

Operation of the Board of Directors

LG CNS holds regular BOD meetings according to an annual schedule. The BOD deliberates and decides on matters stipulated by laws and regulations and the Articles of Incorporation, as well as important management issues related to economic, social, and environmental aspects. Where urgent matters require decision-making, an extraordinary BOD meeting is convened. The BOD is operated in accordance with transparent standards and procedures, and BOD resolutions require the presence of a majority of directors, as well as a majority vote from those present.

Corporate Governance

Activities of the Board of Directors

LG CNS held a total of eleven BOD meetings in 2024, approving 28 agenda items.

Category	Date of BOD meeting	Agenda	Approval Status	Attendance
1st OGM	Feb 6	Approval of the 37 th annual financial statements and business report	Approved	100%

		Approval of personnel promotion of executive officer	Approved	
		Appointment of a compliance officer	Approved	
EGM	Dec 5	Approval of issuance of new shares and sale of existing shares for listing on the stock exchange	Approved	85.7%

Evaluation of the Board of Directors

To ensure fairness, overseen by the HR Department and the BOD Secretariat, LG CNS plans to conduct annual evaluations of independent directors based on their attendance at BOD meetings, and their contribution to the operation of internal control and monitoring mechanisms for the company's significant financial risks as audit committee members.

Operation of Committees within the Board of Directors

Audit Committee

LG CNS' Audit Committee conducts audits of accounting, operations, and the performance of directors' duties. The committee plays an active role in internal control by requesting reports on business operations, investigating the company's operations and financial status, and receiving reports on the status of external audits. The committee reviews matters that may affect the independence of external auditors in accordance with the regulations, and external auditors obtain approval from the committee prior to conducting non-audit services. To ensure the independence of the committee, LG CNS has appointed all committee members as independent directors, and to strengthen the committee's expertise, we requested that an external accounting firm provide regular training on recent accounting oversight trends. The chairperson of the Audit Committee is an accounting or finance expert and is responsible for monitoring and checking the company's major management matters.

Internal Transaction Committee

LG CNS' Internal Transaction Committee deliberates on transactions between affiliates that require approval from the BOD in accordance with the relevant laws and regulations, including transactions with the largest shareholders and related parties under the Commercial Act, transactions subject to regulations on the provision of unfair assistance under the Monopoly Regulation and Fair Trade Act, and other internal transactions requiring the BOD's approval under other laws and regulations. LG CNS has appointed a majority of the committee members as independent directors to enhance fairness in transactions and transparency in corporate management by strengthening internal controls.

Independent Director Candidate Recommendation Committee

LG CNS has established and operates an Independent Director Candidate Recommendation Committee to recommend candidates for independent directors in accordance with the provisions of the Commercial Act and the Articles of Incorporation. To ensure the fair and independent appointment of independent directors and operation of the committee, the committee consists of three independent directors and two other non-executive directors, with independent directors constituting the majority of the total number of members, in accordance with the committee regulations.

Corporate Governance

ESG Committee

LG CNS is strengthening its ESG management in the areas of environment, society, and governance to achieve long-term and sustainable growth. In October 2024, we established the ESG Committee, the highest decision-making body for ESG. The committee establishes basic policies and strategies for ESG management to advance governance, strengthen social responsibility, and enhance shareholder value. It also reviews and approves agenda items related to the setting of mid to long-term goals and the implementation of management activities. The ESG Committee reports on overall issues, including significant issues, once in the first and second halves of each year (or whenever necessary); in 2025, the ESG Committee was held in March. The ESG Committee is composed entirely of independent directors and the representative director, and an independent director was appointed as the chairperson to ensure the independence of the committee.

Number of Meetings of Committees within the Board of Directors

Category	Unit	2024
Audit Committee	Time	3
Internal Transaction Committee	Time	2
Independent Director Candidate Recommendation Committee	Time	1
ESG Committee	Time	1

Shareholder Status

The total number of shares issued by LG CNS is 87,197,353 (as of December 31, 2024), and the largest shareholder is LG Corp., which holds 49.95% of the total shares. Other shareholders consist of Crystal Korea Co, Ltd. holding 35.00%, the employees' stock ownership association holding 0.79%, and minority shareholders holding 14.26%.¹⁾

Category	Name of Shareholder	Number of Share Owned	Ratio (%)
Shareholders holding more than 5%	LG Corp.	43,557,218	49.95
	Crystal Korea Co, Ltd.	30,519,074	35.00
Other shareholders	Employee's Stock Ownership Association	689,356	0.79
	Minority Shareholders and Related Parties, etc.	12,431,705	14.26

As of December 31, 2024

1) On February 5, 2025, LG CNS went public and issued 9,688,595 new shares (common stock), increasing the total number of shares issued to 96,885,948

Compliance

Policy

Compliance Governance

Compliance Committee

LG CNS has established the Compliance Committee chaired by the CFO to effectively prevent compliance risks. The Committee consists of risk owners, key executives from the organizations of the risk owners, planning teams of business divisions, and overseas subsidiaries. The Committee meets quarterly to discuss risk prevention plans, review progress, and address current issues.

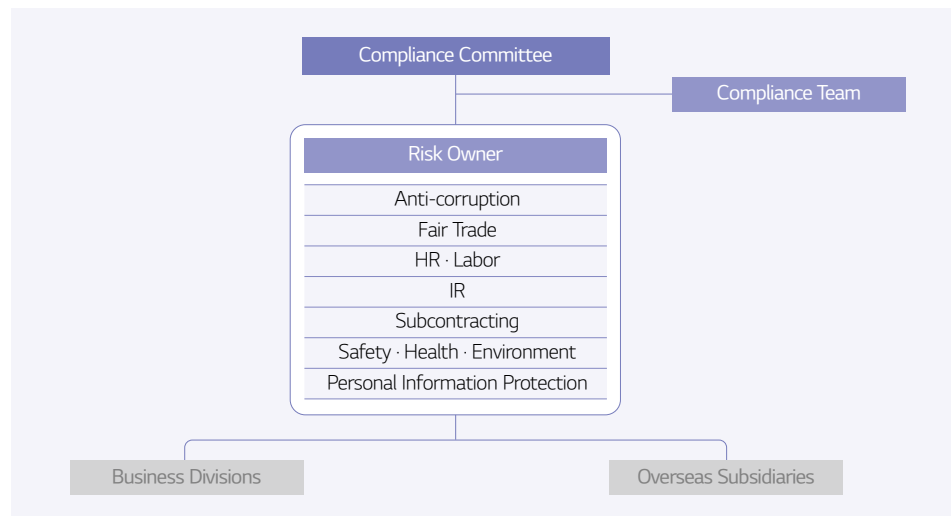

Compliance Team

The Compliance Team supports the operation of LG CNS' compliance programs by establishing compliance policies, operating the Compliance Committee, and conducting promotional activities.

Risk Owner

Risk owners who manage compliance risks establish risk prevention plans, conduct inspections, and implement improvement activities in the areas of anti-corruption, fair trade, HR and labor, IR, subcontracting, safety · health · environment, and personal information protection.

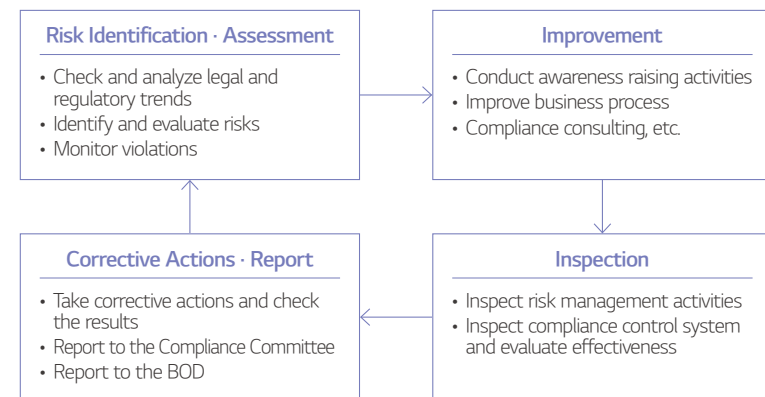

Compliance Management System

Compliance Program

The purpose of LG CNS' compliance program is to ensure that the company's compliance management philosophy is demonstrated in all aspects of its business operations. The Compliance Officer, who is appointed by the BOD, operates the compliance control system, including assessing legal risks, conducting compliance training, and performing compliance inspection, in accordance with the authority and responsibilities granted by the compliance control standards. The Compliance Officer also reports to the BOD on the results of evaluations conducted by external agencies regarding compliance with the compliance control standards and the effectiveness of the compliance control system. The Compliance Management Regulation outlines the responsibilities and obligations of the company and its employees for compliance management, and covers risk management areas, the roles of risk owners, and the composition and operational principles of the Compliance Committee.

Compliance Program Operation Process

Compliance Risk Management

LG CNS operates risk prevention programs that include continuous monitoring, preventive training, inspections, and consulting for management areas based on risk profiles that identify legal risks. In addition, we focus on managing key and core key risks with a high probability of occurrence and impact.

Compliance

Goal

Key Goals of Compliance

In 2025, we plan to further strengthen our compliance control system by managing risks in the IR field, and by enhancing the legal risk assessment and management system, including through the establishment of risk profiles for major overseas subsidiaries, improvements in the efficiency of compliance inspections, and strengthened compliance education programs.

CEO's Commitment

LG CNS implements compliance management practices to fulfill its corporate social responsibilities and obligations, and declares its commitment to compliance management through the CEO's Commitment, both internally and externally.

Dear LG CNS Employees, This is Hyun Shin-Gyoon, CEO of LG CNS.

I extend my sincere gratitude to all our staff working tirelessly in domestic and international business environments to secure an overwhelming competitive edge, even in uncertain business conditions.

As we approach our planned listing in February, our company is establishing a compliance management framework befitting a listed company, ensuring we fulfill our social responsibilities and obligations.

Compliance management aims to instill a culture of compliance through employee education and preventive measures. It serves as a powerful mechanism to protect both the company and its members. Moreover, compliance is an essential management principle that must never be overlooked as we continue to strengthen our market leadership and prepare for the future. It is also a fundamental component in realizing the key objectives I emphasized in my New Year's address; securing AX leadership, preparing for the future, and innovating our business approach.

Since implementing the Compliance Program in 2014, our company has proactively engaged in preemptive risk management and employee awareness training to ensure full compliance with all applicable laws, regulations, and internal policies across every market we operate in. As of 2024, we have further reinforced our commitment to compliance management by appointing a Compliance Officer, establishing compliance control standards, and conducting compliance audits—meeting the expectations placed upon a listed company.

To all LG CNS employees!

Every LG CNS member, including management, must strictly comply with all relevant laws and regulations in their work, with no exceptions under any circumstances.

We all understand that even a small mistake, a moment of poor judgment, or a complacent attitude can jeopardize everything we have built, undermining client trust and even threatening the company's existence. I urge you to meticulously review not only the obvious but also the details we may have previously overlooked from a compliance perspective. The company will continue its efforts through regular monitoring and training to foster a culture of voluntary compliance.

I ask for your active participation in our compliance management initiatives, and together, let us build a stronger future for LG CNS!

January 21, 2025
Hyun Shin-Gyoon, CEO

CEO's Commitment

Activity & Performance

Compliance Training

LG CNS conducts compliance awareness activities for all employees, and provides regular compliance training for sales personnel who interact with clients, and employees of overseas subsidiaries. We educate employees on fair trade rules to prevent collusion, keeping them informed of changes in the laws, regulations, and business environments. We also educate employees on matters they must strictly observe in order to promote a culture of fair trade and mutual cooperation with suppliers. The quantitative goal for compliance education in 2025 is to ensure that 80% or more of the target employees complete the training.

Compliance Training

Compliance Training Target by Year

Category	Year	Target
Education for sales personnel	2022	421 people
	2023	524 people
	2024	506 people
Education for employees of overseas subsidiaries ¹⁾	2024	68 people

1) Training for employees of overseas subsidiaries has been implemented since 2024

Monitoring Legislative Trends

We monitor legislative and regulatory trends related to our business areas to respond flexibly to rapidly changing business environments and international situations. We analyze the impact on the company and provide monthly legislative trend letters to management to support management activities.

Compliance

Anti-corruption Activities

LG CNS employees conduct business fairly and transparently in accordance with principles and standards, and follow the Jeong-Do Management principle of obtaining or maintaining business through legitimate means, without resorting to unethical approaches such as bribery, and competing fairly based on ability.

On the first business day of each year, all employees reaffirm their commitment to complying with anti-corruption laws by signing a pledge which indicates their understanding of and agreement to follow the company's policy of complying with all domestic and international anti-corruption laws, including prohibitions against improper solicitation, offering money or valuables, and engaging in corrupt activities through third parties.

In response to the global trend of strengthening anti-corruption regulations and penalties, LG CNS has included precautions for overseas business in its anti-corruption regulations to prepare for anti-corruption regulatory risks in each country, and has established enhanced pre-inspection procedures to prevent risks when conducting overseas business.

Key Activities by Risk Management Area

HR · Labor	Work environment monitoring, etc.
IR	Prevention of the use of unpublished confidential information, etc.
Subcontracting	Online training on collaboration risks Provision and review of new project guidelines, etc.
Safety · Health · Environment	Business sites and project safety inspections, etc.
Personal information protection	Inspection of personal information consignee, etc.

Promoting Fair Trade Practices in the Company

Improve Business Processes

- Promptly reflect changes in the Fair Trade Act, the Subcontracting Act, and review guidelines in business processes and systems when they are revised and implemented, and notify employees to prevent potential violations due to unfamiliarity with the revisions
- Review and improve internal processes to ensure fair transactions with suppliers

Conduct Online and Offline Training and Monitoring

- Conduct online and offline training for employees on collusion prevention, subcontracting compliance, and the latest trends to spread fair trade awareness
- Prevent and manage fair trade risks by conducting monitoring to prevent violations of fair trade laws and regulations

Operate Fair Trade Portal

- Provide content such as "Introduction to fair trade," "Report of contact with competitors' employees," "Technical data request," "Compliance guide," etc.
- Provide information on revisions to laws and regulations to enable employees to perform their duties in compliance with fair trade laws and regulations

Anti-Cartel Pledge

- Every January, all employees sign an anti-cartel pledge
- Contact with competitors' employees is prohibited in principle, and when it is unavoidable, pre- and post-reporting are required to avoid situations that could lead to suspicion of collusion

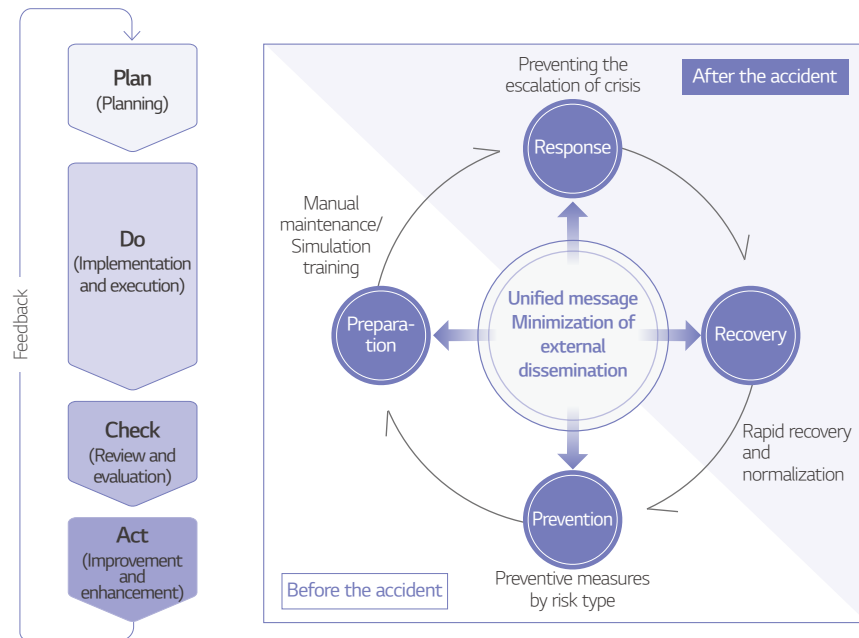

Risk and Crisis Management

Policy

LG CNS Risk Management Framework

LG CNS has been continuously enhancing its corporate crisis management framework, appointing a Chief Risk Management Officer (CRO) in 2021 and establishing the Crisis Management Bureau in 2024 to develop a corporate crisis management system in line with the LG Group's crisis management strategy. Based on the Group's standard crisis management framework, we have developed systems and processes across the "Plan-Do-Check-Act" domains, strengthening our execution capabilities. We are focusing on improving the company's overall crisis management capabilities, from risk prevention to crisis response, by identifying areas for improvement through operational checks and executing the Plan-Do-Check-Act cycle.

Crisis response process based on the Plan-Do-Check-Act framework

Through this approach, LG CNS is focused on preventing events or accidents that could seriously affect business continuity, reputation, and relationships with key stakeholders, and on minimizing damage in the event of a crisis.

Corporate Crisis Management Governance

LG CNS operates the "Crisis Management Committee" in line with the Group's crisis management approach. The Committee is the company's highest decision-making body, discussing and making decisions on the overall operations of the crisis management system, including determining company-wide crisis management policies and reviewing crisis response systems for each subcommittee.

The Corporate Crisis Management Committee appoints the CRO as chairperson to ensure efficient decision-making, and holds quarterly meetings with subcommittee members, which consist of key executives from risk owner organizations.

Organization Chart of the Corporate Crisis Management Committee

Preventive Activities of Risk Owner Organizations

LG CNS manages risks in each area to prevent risks and respond quickly and effectively when they arise. In 2025, risk owner organizations in areas such as quality strategy/implementation, safety and health/environment, information security, public relations & affairs, legal, HR, purchasing, and finance are engaging in preventive activities.

Each risk owner organization identifies risks in advance based on changes in internal and external environments, establishes and implements risk management and mitigation plans, and shares these activities with the Crisis Management Committee for continuous management.

Risk and Crisis Management

Goal

LG CNS continuously revises and supplements its criteria for evaluating crisis factors, such as quality and information security, as well as crisis levels (A to D), according to its own circumstances. We classify incidents or accidents that could damage our business or corporate reputation as major crises. Based on key crisis factors and crisis level assessment criteria, we comprehensively evaluate our management responsibility, severity of damage, stakeholders, and possibility of the issue spreading, in order to determine whether to activate the company-wide crisis response system and execute the necessary actions.

LG CNS conducts an annual self-assessment of its crisis management system level (maturity) using the Group's crisis management system standard model maturity checklist. On the LG Group's Level 5 crisis scale, we achieved Level 3 in 2024, one level higher than the previous year. We will continue to improve our crisis management system by holding quarterly Corporate Crisis Management Committee meetings and conducting company-wide mock drills in the first and second halves of the year, as well as performing activities to raise employees' awareness of crisis management.

Activity & Performance

Key Crisis Factor Management

The Crisis Management Bureau, under the CRO, manages the LG Crisis Map by selecting key crisis factors that could affect business operations every year in accordance with group standards. In addition, the Bureau continuously revises company-wide crisis management regulations and manuals and shares them with employees to raise awareness of crisis management.

Crisis Category	Crisis Type	Crisis Situation
Safety	Safety and health accidents	<ul style="list-style-type: none"> - Injury : Serious accident such as death or serious injury as defined by the Serious Accidents Punishment Act - Fire/Explosion : Large-scale fire caused by flammable or explosive substances, electrical leakage, short circuit, etc. - Infectious disease : Outbreak of a new or unknown infectious disease that restricts business activities - Occupational disease : Occurrence of an occupational disease as defined by the Serious Accidents Punishment Act
	Natural disaster accidents	<ul style="list-style-type: none"> - Floods, earthquakes : Human and material damage caused by natural disasters
	Facility/Production facility (Utility) accident	<ul style="list-style-type: none"> - Facility collapse : Human and material damage caused by facility collapse
Quality	IT quality	<ul style="list-style-type: none"> - Service implementation quality : Project setbacks caused by issues occurring in high-risk projects or project issues/deficiencies due to delays in resolving defects during the testing or deployment phase, or delays in launching the service - Service operation failure : Interruption or delay in providing service to clients due to a serious failure in the operating system and SaaS services
	Security breach	<ul style="list-style-type: none"> - Hacking/network intrusion : Serious damage caused by data destruction and leakage
Information security	Information leakage	<ul style="list-style-type: none"> - Personal information leakage : Serious damage caused by personal information leakage (legal non-compliance, compensation for damages) - Confidential information leakage : Serious damage caused by leakage of client/internal confidential data (legal non-compliance, compensation for damages)
	Fair trade	<ul style="list-style-type: none"> - Collusion : Punishment, sanctions, and media exposure due to agreement between businesses aimed at restricting competition - Unfair trade practices (including subcontracting) : Sanctions and media exposure due to unfair support in the form of significantly favorable conditions or substantial amounts
Compliance	Intellectual property rights	<ul style="list-style-type: none"> - Infringement/disputes : Criminal or civil damages arising from intellectual property infringement/disputes
	Corruption and irregularities	<ul style="list-style-type: none"> - Anti-corruption : Punishment for violating anti-corruption laws (bribery, improper solicitation) and sanctions against inappropriate business entities
	Violation of laws and regulations	<ul style="list-style-type: none"> - Criminal/administrative case : Occurrence of a criminal/administrative case that has a significant impact on the company's management
HR/Labor	Employment	<ul style="list-style-type: none"> - Personnel accidents : Increased risk due to employee death, workplace discrimination, or harsh treatment
	Conflict of interest	<ul style="list-style-type: none"> - Labor-management conflict : Situation in which conflict escalates due to a discrepancy between employees' collective demands and company policy
	Regulatory/legal violations	<ul style="list-style-type: none"> - Strengthening labor relations laws : Corrective measures (including lawsuit and accusation) due to non-compliance with strengthened labor relations laws and regulations
Reputation	Reputation management	<ul style="list-style-type: none"> - Media issues (negative press coverage, social media, etc.) : Damage to reputation due to spread of negative public opinion - National Assembly/Government audit : Reputational damage caused by selection as witness and appearance at hearings
	Credit/accidents of suppliers	<ul style="list-style-type: none"> - Bankruptcy (insolvency) of suppliers : Bankruptcy/insolvency of key suppliers collaborating on projects
Finance	Finance	<ul style="list-style-type: none"> - Financial incident : Large-scale overpayment or underpayment of funds, embezzlement or misappropriation
	IR	<ul style="list-style-type: none"> - Omission/delay in public disclosure : Sanctions imposed due to omission, error, or delay in mandatory disclosures
Emerging Risk	Atypical	<ul style="list-style-type: none"> - Risks expected to arise due to external environmental changes (global trends, incidents/accidents, legal regulations, etc.) - Global political situations such as war/terrorism, natural disasters such as climate crises, policy changes, technological changes, etc.

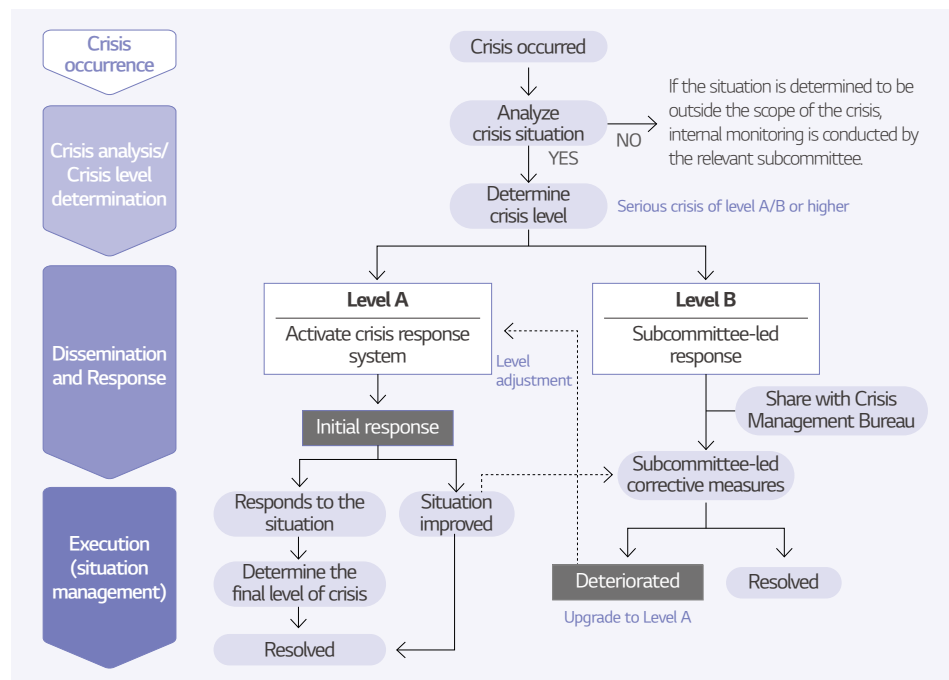

Risk and Crisis Management

Company-wide Serious Crisis Response Process

When a crisis factor that falls under a crisis category occurs, LG CNS takes follow-up measures such as reporting and dissemination of information on the crisis and issuing on-site instructions in accordance with the regulations and response procedures of the relevant risk owner organization. We regularly review our response systems for crises that could have a significant impact on business operations, and in the event of a serious crisis, activate our company-wide emergency response system to facilitate a swift and efficient response.

Through this system, we respond to crises with a clear division of roles and collaboration between relevant organizations to ensure that consistent messages are communicated to internal and external stakeholders, including shareholders, employees, the media, and the holding company. In the event of an incident or accident, we promptly disseminate and report information simultaneously, while implementing proactive measures to prevent crises from spreading outside the organization.

Serious Crisis Response Process

In the event of a crisis, we identify the root causes and potential crises derived from the impact of the damage, and establish and implement crisis response tasks and measures to prevent recurrence. We then check and monitor the implementation process through L&L (Lesson-Learned) and manage the necessary changes until a full recovery is achieved.

Operation of Crisis Management Information System (CMIS)

LG CNS established the Crisis Management Information System (CMIS), which has been operated company-wide since 2023, to facilitate rapid communication, response, and management of crises. CMIS quickly disseminates information about issues or incidents to relevant departments, employees, and the holding company in accordance with predefined corporate crisis management standards and procedures. It also consolidates the results of responses to crises in one place for monitoring purposes.

Screenshot of the Crisis Management Information System (CMIS)

Execution of Company-wide Crisis Response Simulation Exercise

LG CNS has been conducting company-wide crisis response simulation exercises to strengthen its crisis response capabilities across the entire organization. Previously, these exercises were conducted separately for each area, but in 2024, we collaborated with relevant organizations to plan and execute a company-wide exercise. Through these exercises, we continuously review and improve our crisis response processes and communications systems. After the exercise, we undergo the L&L process to improve the effectiveness of the exercises. We also plan to conduct repetitive exercises based on realistic scenarios to enhance employees' crisis response capabilities.

Company-wide crisis response simulation exercise

Jeong-Do Management

Policy

LG Code of Ethics

LG has established its Code of Ethics as the standard for proper behavior and value judgments that all employees must follow to promote respect for the free market economy system, which fosters free and fair competition, and encourages mutual benefits with all stakeholders based on trust and cooperation. LG is committed to implementing the Code of Ethics.

The LG Code of Ethics covers responsibilities and obligations to clients, fair competition, fair transactions, basic ethics for employees, corporate responsibilities for employees, and responsibilities to the nation and society. LG CNS complies with this Code of Ethics.

Responsibilities and Obligations to Customers

- Respect customers
- Create value
- Deliver value

Fair Competition

- Pursue free competition
- Comply with laws and regulations

Fair Transactions

- Equal opportunity
- Fair transaction process
- Pursue mutual growth

Basic Ethics for Employees

- Basic ethics
- Accomplish mission
- Self-development
- Fairness in performance
- Avoid conflict of interest with the company

Corporate Responsibilities for Employees

- Respect for human dignity
- Fair treatment
- Promote creativity

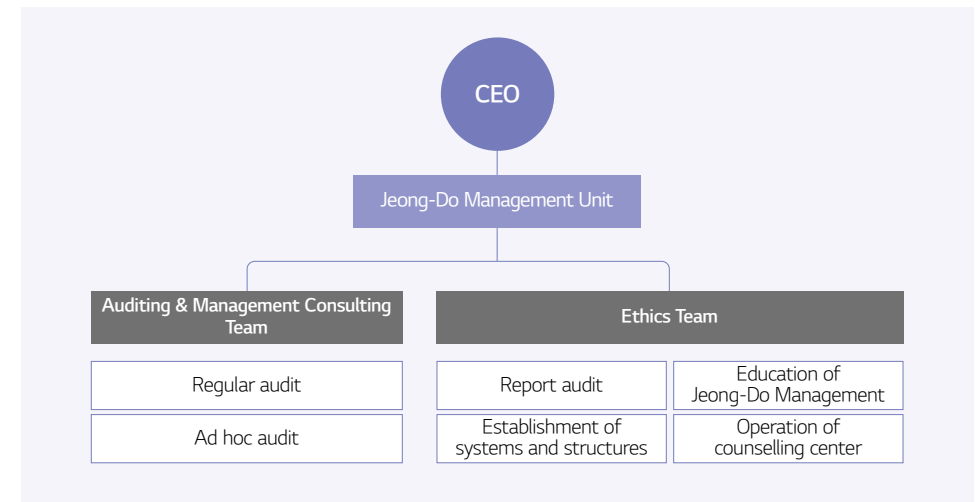

Responsibilities to the Nation and Society

- Rational business operation
- Protect shareholder returns
- Contribute to society
- Conservation of the environment

Jeong-Do Management Governance

To achieve the systematic practice of Jeong-Do Management, LG CNS operates a dedicated organization directly under the CEO and performs regular and ad hoc audit. In addition, the Ethics team of the Jeong-Do Management Unit audits of reported cases, educates employees on Jeong-Do Management, spreads Jeong-Do management practices, establishes relevant systems and structures, and operates a counseling center.

Goal

Direction of Promotion of Jeong-Do Management

LG CNS aims to establish a proactive inspection system to prevent possible Jeong-Do Management-related risks by major business processes and businesses, and to continuously improve the related processes and systems. In addition, we will expand Jeong-Do Management training to overseas corporations and suppliers to build mutual trust and cooperation through transparent and fair transactions to pursue common development from a long-term perspective.

Jeong-Do Management

Activity & Performance

Operation of Jeong-Do Management Noticeboard

LG CNS operates an internal portal-based “Jeong-Do Management Guide” to help employees better access and implement Jeong-Do Management systematically. Through the noticeboard, we share Jeong-Do Management announcements and violation cases in real time, provide constant access to the LG Code of Ethics, and offer self-assessment and real-time consultation services.

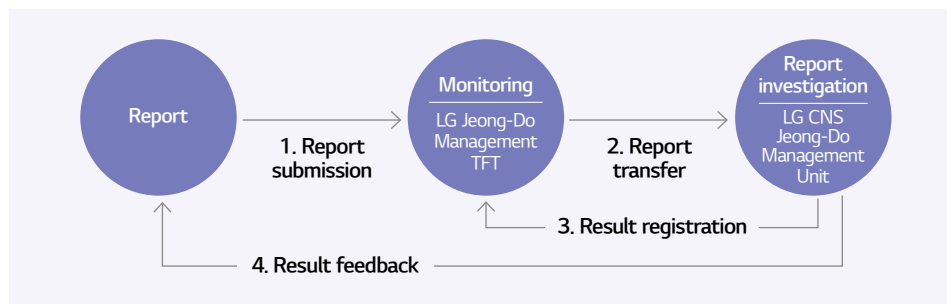

“Jeong-Do Management Guide” noticeboard

Operation of Reporting Channels for Corruption and Irregularities

LG CNS receives reports of violations of the Code of Ethics, corruption and irregularities through various channels, including the Jeong-Do Management reporting channel, phone, and email. We strictly protect reporters from any adverse consequences resulting from their reports. In addition, we operate a reporter reward program to provide compensation to both internal and external reporters, thereby contributing to the activation of reporting and the eradication of misconduct.

Reporter Protection and Confidentiality

Jeong-Do Management Awareness Promotion Activities

Jeong-Do Management Implementation Pledge

LG CNS regularly reaffirms its commitment to complying with the LG Code of Ethics and practicing Jeong-Do Management to fulfill its responsibilities to our clients, suppliers, shareholders, and society, and to become a respected market leader. All employees begin their work each year after signing a Jeong-Do Management Pledge, and suppliers are also required to sign the pledge when signing contracts with LG.

Jeong-Do Management Training and Awareness Activities

LG CNS conducts regular Jeong-Do Management training for new and experienced employees and new leaders every year to ensure that Jeong-Do Management becomes an internalized behavior pattern among employees. In 2024, we provided training to all employees, with a total of 6,224 employees participating. In addition, as part of our activities aimed at raising awareness among employees, we post “Jeong-Do Management Letters” and “Jeong-Do Management Violation Cases” on the internal portal to raise awareness on a regular basis.

Communication with Stakeholders

Operating Multiple Communication Channels

LG CNS defines clients, employees, suppliers, industries, shareholders, investors, and local communities as key stakeholders, and has established two-way communication channels for each of these groups. To assess the materiality of key ESG issues, we conduct surveys of our stakeholders and try to reflect their diverse opinions in our corporate management.

	 Clients	 Employees	 Suppliers	 Public institutions and Industries	 Shareholders and Investors	 Local Community

Environmental Performance¹⁾

Greenhouse Gas

Category	Unit	2022	2023	2024
Total GHG emissions ²⁾	tCO ₂ eq	134,223	130,017	130,303
Scope 1 (Direct GHG emissions)	tCO ₂ eq	606.65	675.66	804.18
Scope 2 (Indirect GHG emissions)	tCO ₂ eq	133,618.80	129,344.75	129,502.77
GHG emissions intensity	tCO ₂ eq/KRW 100 million	2.70	2.32	2.18
Percentage of reduced GHG emissions compared to the previous year	%	-8.23	3.13	-0.22

Energy³⁾

Category	Unit	2022	2023	2024
Total energy usage ⁴⁾	TJ	2,852	2,772	2,782
Fuel	TJ	10.01	10.90	12.73
Steam	TJ	213.41	219.63	218.88
Electricity	TJ	2,624.38	2,537.25	2,546.21
Directly generated renewable energy	TJ	4.53	4.09	3.82
Energy use intensity	TJ/KRW 100 million	0.06	0.05	0.05

Air Pollutants⁵⁾

Category	Unit	2022	2023	2024
Volatile organic compounds (VOC)	ton	0	0	0
Nitrogen oxides (NOx)	ton	0	0	0
Sulfur oxides (SOx)	ton	0	0	0
Particulate matter (PM)	ton	0	0	0

1) Reference for GHG/Energy data
- 2022, 2023 : Headquarter + 4 data centers (Busan, Gaseon, Incheon, Sangam) + Sangam DDMC + Yonsei Severance Building (Excluding business sites using leased building on the basis of GHG emission/energy usage statement)
- 2024 : Included Hanam Data Center
- Intensity is calculated based on consolidated sales

2) The total GHG emissions differ slightly from the sum of GHG emissions by type because numbers on GHG emission statement are round numbers

3) The total energy consumption differ slightly from the sum of consumptions by type because numbers on energy usage statement are round numbers

4) Starting with this year's report, the figure was calculated by combining the amount of directly generated renewable energy from 2022 to 2024, resulting in an increase in the figure compared to the data in the previous year's sustainability report

5) LG CNS does not emit air pollutants

UN SDGs

UN SDGs (Sustainable Development Goals)

The United Nations has proposed the UN Sustainable Development Goals (UN SDGs), consisting of 17 goals, to respond to the economic, environmental, and social issues facing humanity and to realize sustainable development together with the world. LG CNS is implementing activities to create social value with a focus on achieving 10 goals, excluding specific goals that are not closely related to the company, such as poverty, marine resources, and agricultural development.

GHG Emissions Verification Statement

LG CNS

Verification Target and Scope

This verification was conducted based on the 2024 greenhouse gas emissions and energy usage statement prepared by LG CNS and all greenhouse gas emission sources under the operational control of LG CNS, targeting energy-using facilities and means.

Verification Criteria

This verification was conducted in accordance with the Guidelines for Reporting and Certification of Emissions of the Greenhouse Gas Emissions Trading System [Korean Ministry of Environment Notification No. 2025-28] and the Verification Guidelines for Operation of the Greenhouse Gas Emissions Trading System [Korean Ministry of Environment Notification No. 2024-169].

Verification Procedure

The statement verification was planned and performed in accordance with the procedures stipulated in the “Guidelines for Reporting and Certification of Emissions of the Greenhouse Gas Emissions Trading System” and the “Verification Guidelines for the Operation of the Greenhouse Gas Emissions Trading System,” and was conducted by Daeil E&C Technology, a greenhouse gas verification body. The assurance level of the verification was planned and performed in accordance with the manual and procedures and was performed to satisfy a reasonable level of assurance. Therefore, it was verified to a reasonable level of assurance in accordance with the verification principles of completeness, consistency, accuracy, transparency, and appropriateness, and it was confirmed through internal deliberation whether the entire verification process was carried out in accordance with regulations and guidelines.

Verification Limits

Verification has inherent limitations that may arise in the process of applying the level, standards, and methods of reported data.

Verification Opinion

No significant errors were found in the 2024 greenhouse gas emissions and energy usage statement in the following table submitted by your company, and it satisfies the criteria for the materiality assessment, so we present an “appropriate” opinion.

No	Business Name	Annual Greenhouse Gas Emissions (tCO ₂ eq)			Annual Energy Usage (TJ)			
		Direct GHG Emission (Scope 1)	Indirect GHG Emission (Scope 2)	Total Amount	Fuel Usage	Electricity Usage	Steam Usage	Total Amount
1	Sangam IT Center	20899	33,326.241	33,347	0.301	553.685	194.622	748
2	Construction sector workplace	-	-	-	-	-	-	-
3	Incheon IT Center	2,360	3,391.305	3,393	0.034	70.866	-	70
4	Busan IT Center	170.877	44,150.283	44,321	2.463	922.579	-	925
5	Gasan IT Center	110.298	33,723.242	33,833	1.938	704.692	-	706
6	Head Office	470.527	4,097.638	4,568	7.421	71.936	19.457	98
7	Sangam DDMC	-	1,407.771	1,407	-	25.898	4.799	30
8	Rental Business	-	363.014	363	-	7.586	-	7
9	Yonsei Severance Building	29.215	283.404	312	0.576	5.922	-	6
10	Hanam IT Center	-	9,122.893	9,122	-	190.635	-	190
Sum		804.177	129,865.791	130,666	12.733	2,553.799	218.878	2,780

Note) The sum of the above direct and indirect emissions may differ slightly depending on the total greenhouse gas emissions and the guideline digit processing regulations.

June 10, 2025

Jeong Hae-jong, CEO of Daeil E&C Technology

Independent Assurance Opinion Statement

To : The Stakeholders of LG CNS

Overview

The British Standards Institution (hereinafter referred to as the "Assurer") was requested to verify the LG CNS' 2024-2025 Sustainability Report (hereinafter referred to as the "Report"). The Assurer is independent to LG CNS and has no major operational financial interest other than the assurance of the Report. This assurance opinion statement is intended to provide information related to the assurance of the LG CNS' report relating to the environment, social and governance (ESG) to the relevant stakeholders and may not be used for any other purpose. This assurance opinion statement is prepared based on the information presented by the LG CNS. The verification does not extend beyond such information and is solely based on it. In performing such verification, the Assurer has assumed that all such information is complete and accurate.

LG CNS is responsible for managing the relevant information contained within the scope of assurance, operating the relevant internal control procedures, and for all information and claims contained in the Report. Any queries that may arise by virtue of this independent assurance opinion statement or matters relating to it should be addressed to LG CNS only.

The Assurer is responsible for providing LG CNS' management team with an independent assurance opinion containing professional opinions derived by applying the assurance methodology to the scope specified, and to provide the information to all stakeholders of LG CNS. The Assurer will not, in providing this independent assurance opinion statement, accept or assume responsibility (legal or otherwise) or accept liability for or in connection with any other purpose for which it may be used, or to any person or party by whom the independent assurance opinion statement may be read.

Scope

The scope of engagement agreed upon with LG CNS includes the following :

- Report contents during the period from January 1st to December 31st 2024 included in the Report, some data of 2025 are included.
- Major assertion included in the Report, such as sustainability management policies and strategies, goals, projects, and performance, and the Report contents related to material issues determined as a result of materiality assessment.
- Appropriateness and consistency of processes and systems for data collection, analysis and review.
- Confirmation of the Report's compliance with the AA1000 Accountability Four Principles and, where applicable, the reliability of the sustainability performance information contained within the Report, based on the type of sustainability assurance performed in accordance with AA1000 AS v3.

The following contents were not included in the scope of assurance.

- Financial information in Appendix.
- Index items related to other international standards and initiatives other than the GRI.
- Other related additional information such as the website, business annual report.

Assurance Level and Type

The assurance level and type are as follows ;

- Moderate level based on AA1000 AS and Type 1 (confirmation to the four principles as described in the AA1000 Accountability Principle 2018 and quality and reliability of specific performance information published in the report.)

Description and sources of disclosures covered

Based on the scope and methodology of assurance applied, the Assurer reviewed the following disclosures based on the sampling of information and data provided by LG CNS.

[Universal Standards]

2-1 to 2-5 (The organization and its reporting practices), 2-6 to 2-8 (Activities and workers), 2-9 to 2-21 (Governance), 2-22 to 2-28 (Strategy, policies and practices), 2-29 to 2-30 (Stakeholder engagement), 3-1 to 3-3 (Material Topics Disclosures)

[Topic Standards]

201-1, 205-3, 206-1, 302-1&3, 303-3, 305-1,2,4,5&7, 306-3-5, 401-1&3, 403-1-9, 404-1&2, 405-1, 409-1, 415-1, 418-1

Methodology

As a part of its independent assurance, the Assurer has used the methodology developed for relevant evidence collection in order to comply with the verification criteria and to reduce errors in reporting. The Assurer has performed the following activities ;

- Validation of the materiality assessment and internal analytical process for determining assurance priorities, and a top-level review of issues that may be raised by external stakeholders in the context of sustainability.
- Discussion with managers and representatives on stakeholder engagement.
- Review of the supporting evidence related to the material issues through interviews with senior managers in the responsible departments.
- Review of the system for sustainability management strategy process and implementation.
- Review of the materiality issue analysis process and prioritization and verifying the results.
- Verification of data generation, collection and reporting for each performance index and document review of relevant systems, policies, and procedures.
- An assessment of LG CNS' reporting and management processes against the principles of Inclusivity, Materiality, Responsiveness and Impact as described in the AA1000 Accountability Principles Standard (2018).
- Visit of the Headquarters of LG CNS to confirm the data collection processes, record management practices.

Limitations and approach used to mitigate limitations

The Assurer performed limited verification for a limited period based on the data provided by LG CNS. It implies that the Assurer is therefore subject to limitations relating to inherent risks that may exist without the identification of material errors. The Assurer does not provide assurance on possible future impacts that cannot be predicted or verified during the verification process and any additional aspects related thereto.

Independent Assurance Opinion Statement

Competency and Independence

British Standards Institution (BSI) is a leading global standards and assessment body founded in 1901. BSI is an independent professional institution that specializes in quality, health, safety, social and environmental management with over 120 years history in providing independent assurance services globally. No member of the assurance team has a business relationship with LG CNS. The Assurer has conducted this verification independently, and there has been no conflict of interest. All assurers who participated in the assurance have qualifications as an AA1000AS assurer, have a lot of assurance experience, and have in-depth understanding of the BSI Group's assurance standard methodology.

Opinion Statement

The assurance was conducted by a team of sustainability report assurers in accordance with the AA1000 Assurance Standard v3. The Assurer planned and performed the verification and collected sufficient evidence to explain LG CNS' approach to the AA1000 Assurance Standard and to provide confidence in its self-declaration of compliance with the GRI Standards.

On the basis of our methodology and the activities described above, it is our opinion that the information and data included in the Report are accurate and reliable and the Assurer cannot point out any substantial aspects of material with mistake or misstatement. We believe that the economic, social and environment performance indicators are accurate and are supported by robust internal control processes.

Conclusions

The Report is prepared in accordance with the GRI Standards. (Reporting in accordance with the GRI standards). A detailed review against the AA1000 Accountability Principles of Inclusivity, Materiality, Responsiveness and Impact and the GRI Standards is set out as below.

Inclusivity : Stakeholder engagement and opinion

LG CNS has identified customers, employees, partners, public institutions and industries, shareholders/investors, and local communities as key stakeholders. The company has established and operates various communication channels and cycles tailored to each stakeholder group. Through its stakeholder engagement process, LG CNS gathers expectations and diverse opinions from core stakeholder groups, integrates key identified issues into sustainability-related decision-making, and transparently discloses this process through its reports.

Materiality : Identification and reporting of material sustainability topics

LG CNS has established a process to develop strategies related to sustainable management and identify reporting issues. Based on sustainability standards such as GRI and UN SDGs, industry benchmarking, media research, and key stakeholder survey analysis, the company conducted impact materiality assessment and financial materiality assessment. Through this double materiality evaluation, LG CNS selected 13 issues and 3 key material issues, which are disclosed in its sustainability report.

Responsiveness : Responding to material sustainability topics and related impacts

LG CNS has conducted an "IRO Analysis" on key material issues determined through the double materiality assessment, including information security and personal data protection, technological innovation, and human capital management. Through this analysis, LG CNS has defined each issue, assessed its positive and negative impacts on environmental and social importance, and evaluated risks and opportunities related to financial materiality. Based on these findings, the company has established response strategies for each material issue and reported the corresponding performance in its sustainability report.

Impact : Impact of an organization's activities and material sustainability topics on the organization and stakeholders

LG CNS has established a process to identify and assess the impact of key material issues on the organization and stakeholders. The results of the analysis, including the impact, risks, and opportunities associated with key material issues, are utilized in decision-making for developing response strategies for each issue. This process is transparently disclosed through reports.

Recommendations and Opportunity for improvement

The Assurer provides the following observations to the extent that they do not affect the assurance opinion;

- Corporate governance is a key factor that determines a company's sustainability and responsible management from an ESG perspective. To strengthen governance capabilities, it is essential to understand ESG trends and changes in global regulations, while improving decision-making abilities regarding industry-specific ESG risks and opportunities. This requires systematic strategy development and implementation to enhance governance decision-making processes and strengthen expertise in relevant fields.
- LG CNS applied a double materiality assessment process in its report, conducting both an Impact Materiality Assessment and a Financial Materiality Assessment. Through this process, they identified and disclosed 13 issues and 3 core material issues in the report, providing detailed reporting on the risks, opportunities, and response strategies for each material issue. If future reports include targets and indicators for each core issue, along with performance results and future action plans for addressing deficiencies, it will enhance sustainability and business performance while strengthening corporate value in the long term.

GRI-reporting

LG CNS has self-declared compliance with GRI Standards. Based on the data and information provided by LG CNS, the Assurer confirmed that the Report is prepared in accordance with the GRI Standards, and confirmed there are no errors in the disclosures related to the Universal Standards and Topic Standards Indicators. No sector standard is applied.
